lead based paint has become a national issue and will continue to be a hi priority focus ofnational state and local agencies until there is no lead based paint in the united states lead based paint has become a tremendous health hazard for people and animals lead based paint has been in widespread use throughout europe and the united states lead has been known to be a health hazard since the time ofpliny the elder a d 23 79 but it was deemed that the advantages of lead in paint outweighed the health hazards there has been a change in outlook and in 1973 the u s congress

banned all lead paint from residential structures a voluminous number of law suits have been initiated since and continue to be litigated with the purpose of determining the parties responsible for the lead poisoning of children and others and to exact the indemnities lead based paint is still authorized for use on bridges and nonresidential structures and thousands of city state military and federal government housing projects still contain lead based paint this paint must be removed if these dwellings are to be safe living quarters especially for children aba ment techniques continue to be evaluated some have been used successfully lead based paint abatement will continue into the next century and it is hoped that this comprehensive volume will serve as a guide for those seriously interested in this important subject

christianity seems like just another screwed up religion anna said seriously what has christianity done for us or for the world for that matter they re just a bunch of hypocrites that s what i think are they good for anything i don t know anna caleb said i just don t know caleb has been a christian for a long time but he realizes that he can t bring himself to share his faith with anyone because it doesn t sound like good news anymore christianity s truth claims come across as hollow arrogant and intolerant christians have a bad track record of hating and condemning those they disagree with worst of all it feels like christianity is just about saving souls giving people an escape ticket to heaven while the world falls apart is it only about jesus forgiving our sins there must be more to it than that in this engaging narrative james choung weaves the tale of a search for a christianity worth believing in disillusioned believer caleb and hostile skeptic anna wrestle with the plausibility of the christian story in a world of pain and suffering they ask each other tough questions about what jesus really came to do and what christianity is supposed to be about along the way they discover that real christianity is far bigger than anything they ever heard about in church and the conversion that comes is not one that either of them expects join caleb and anna on their spiritual journeys as they probe christianity from inside and out get

past the old cliches and simplistic formulas and discover a new way of understanding and presenting the christian faith that really matters in a broken world

Connor's Story

2016-09

using science to improve the blm wild horse and burro program a way forward reviews the science that underpins the bureau of land management s oversight of free ranging horses and burros on federal public lands in the western united states concluding that constructive changes could be implemented the wild horse and burro program has not used scientifically rigorous methods to estimate the population sizes of horses and burros to model the effects of management actions on the animals or to assess the availability and use of forage on rangelands evidence suggests that horse populations are growing by 15 to 20 percent each year a level that is unsustainable for maintaining healthy horse populations as well as healthy ecosystems promising fertility control methods are available to help limit this population growth

however in addition science based methods exist for improving population estimates predicting the effects of management practices in order to maintain genetically diverse healthy populations and estimating the productivity of rangelands greater transparency in how science based methods are used to inform management decisions may help increase public confidence in the wild horse and burro program

modern software development faces the problem of fragmentation of information across heterogeneous artefacts in different modelling and programming languages in this dissertation the vitruvius approach for view based engineering is presented flexible views offer a compact definition of user specific views on software systems and can be defined the novel modeljoin language the process is supported by a change metamodel for metamodel evolution and change impact analysis

Using Science to Improve the BLM Wild Horse and Burro Program

2013-09-18

pedestrian protection systems ppss are on board systems aimed at detecting and tracking people in the surroundings of a vehicle in order to avoid potentially dangerous situations these systems together with other advanced driver assistance systems adas such as lane departure warning or adaptive cruise control are one of the most promising ways to improve traffic safety by the use of computer vision cameras working either in the visible or infra red spectra have been demonstrated as a reliable sensor to perform this task nevertheless the variability of human s

appearance not only in terms of clothing and sizes but also as a result of their dynamic shape makes pedestrians one of the most complex classes even for computer vision moreover the unstructured changing and unpredictable environment in which such on board systems must work makes detection a difficult task to be carried out with the demanded robustness in this brief the state of the art in ppss is introduced through the review of the most relevant papers of the last decade a common computational architecture is presented as a framework to organize each method according to its main contribution more than 300 papers are referenced most of them addressing pedestrian detection and others corresponding to the descriptors features pedestrian models and learning machines used in addition an overview of topics such as real time aspects systems benchmarking and future challenges of this research area are presented
