that we think of as natural is a product of the human imagination all animals die but only human beings suffer death and what they suffer is shaped by their own time and culture tragedy was one of the principal instruments through which the culture of early modern england imagined the encounter with mortality the essays in this book approach the theatrical reinvention of death from three perspectives those in part 1 explore death as a trope of apocalypse a moment of un veiling or dis covery that is figured both in the fearful nakedness of the danse macabre and in the shameful openings enacted in the new theatres of anatomy separate chapters explore the apocalyptic design of two of the period s most powerful tragedies shakespeare s othello and middleton and rowley s the changeling in part 2 neill explores the psychological and affective consequences of tragedy s fiercely end driven narrative in a number of plays where a longing for narrative closure is pitched against a particularly intense dread of ending the imposition of an end is often figured as an act of writerly violence committed by the author or his dramatic surrogate extensive attention is paid to hamlet as an extreme example of the structural consequences of such anxiety the function of revenge tragedy as a response to the radical displacement of the dead by the protestant abolition of purgatory one of the most painful aspects of the early modernre imagining of death is also illustrated with particular clarity finally part 3 focuses on the way tragedy articulates its challenge to the undifferentiating power of death through conventions and motifs borrowed from the funereal arts it offers detailed analyses of three plays shakespeare s anthony and cleopatra webster s the duchess of
