this book is written for all science or engineering faculty who have ever found themselves baffled and frustrated by their undergraduate students lack of engagement and learning the author an experienced scientist faculty member and educational consultant addresses these issues with the knowledge of faculty interests constraints and day to day concerns in mind drawing from the research on learning she offers faculty new ways to think about the struggles their science students face she then provides a range of evidence based teaching strategies that can make the time faculty spend in the classroom more productive and satisfying linda hodges reviews the various learning problems endemic to teaching science explains why they are so common and persistent and presents a digest of key ideas and strategies to address them based on the research she has undertaken into

the literature on the cognitive sciences and education recognizing that faculty have different views about teaching different comfort levels with alternative teaching approaches and are often pressed for time linda hodges takes these constraints into account by first offering a framework for thinking purposefully about course design and teaching choices and then providing a range of strategies to address very specific teaching barriers whether it be students motivation engagement in class ability to problem solve their reading comprehension or laboratory research or writing skills except for the first and last chapters the other chapters in this book stand on their own i e can be read in any order and address a specific challenge students have in learning and doing science each chapter summarizes the research explaining why students struggle and concludes by offering several teaching options categorized by how easy or difficult they are to implement some for example can work in a large lecture class without a great expenditure of time others may require more preparation and a more adventurous approach to teaching each strategy is accompanied by a table categorizing its likely impact how much time it will take in class or out and how difficult it will be to implement like scientific research teaching works best when faculty start with a goal in mind plan an approach building on the literature use well tested methodologies and analyze results for future trials linda hodges message is that with such intentional thought and a bit of effort faculty can succeed in helping many more students gain exciting new skills and abilities whether those students are potential scientists or physicians or entrepreneurs her book serves as a mini compendium of current research as well as a protocol manual a readily accessible guide to the literature the best practices known to date and a framework for thinking about teaching

Journal of Engineering Education 2004

are you satisfied with your current and traditional grading system does it accurately reflect your students learning and progress can it be gamed does it lead to grade grubbing and friction with your students the authors of this book two professors of mathematics with input from colleagues across disciplines and institutions offer readers a fundamentally more effective and authentic approach to grading that they have implemented for over a decade recognizing that traditional grading penalizes students in the learning process by depriving them of the formative feedback that is fundamental to improvement the authors offer alternative strategies that encourage revision and growth alternative grading is concerned with students eventual level of understanding this leads to big changes students take time to review past failures and learn from them conversations shift from why did i lose a point for this to productive discussions of content and process alternative grading can be used successfully at any level in any situation and any discipline in classes that range from seminars to large multi section lectures this book offers a comprehensive introduction to alternative grading beginning with a framework and rationale for implementation and evidence of its effectiveness the heart of the book includes detailed examples including variations on standards based grading specifications grading and ungrading of how alternative grading practices are used in all kinds of classroom environments disciplines and institutions with a focus on first hand

accounts by faculty who share their practices and experience the book includes a workbook chapter that takes readers through a step by step process for building a prototype of their own alternatively graded class and ends with concrete practical time tested advice for new practitioners the underlying principles of alternative grading involve evaluating student work using clearly defined and context appropriate content standards giving students helpful actionable feedback summarizing the feedback with marks that indicate progress rather than arbitrary numbers allowing students to revise without penalty using the feedback they receive until the standards are met or exceeded this book is intended for faculty interested in exploring alternative forms of learning assessment as well as those currently using alternative grading systems who are looking for ideas and options to refine practice
