Ridge Augmentation Procedures in Implant Patients 2013-08-05 this book sheds light on three essential questions 1 what is the likely supply of gasoline and diesel from oil worldwide to power light vehicles and trucks through 2030 2035 2 could any other fuel economically replace gasoline will different parts of the world answer that question differently 3 how will the answers to these questions affect what we engineer make and drive in 2030 2035 as difficult as it is to predict timing of these events the book presents reasonable assumptions and alternative scenarios since a switch to alternative technologies will require substantial investment it is critical to have a sense of when despite the global reach of the automotive industry it is unlikely that a solution for one region will fit all a more reasonable goal is a set of projected ecosystems using differing amounts of oil electricity or alternative fuels from this automotive managers and leaders can get a sense of how to make business decisions for the future to frame comparisons the author qualitatively assesses each alternative against these criteria 1 energy density 2 scale 3 efficiency of use 4 consumer convenience 5 vehicle technical maturity 6 delivery infrastructure maturity 7 production infrastructure maturity 8 rate of progress some alternative fuels will naturally be higher in

some categories than others for example gasoline has higher energy density but when burned in internal combustion engines has low efficiency batteries on the other hand have low energy density but are efficient for powering electric motors for mapping out a long term future and deciding how best to invest resources a comparison of these critical criteria should help the book is concisely written for executives decision makers academics automotive engineers and others who want or need a long range view of trends that will influence vehicle fuels for the next 20 years
