Handbook of Nature-Inspired Optimization Algorithms: The State of the Art *2022-08-31*

the introduction of nature inspired optimization algorithms nioas over the past three decades helped solve nonlinear high dimensional and complex computational optimization problems nioas have been originally developed to overcome the challenges of global optimization problems such as nonlinearity non convexity non continuity non differentiability and or multimodality which traditional numerical optimization techniques had difficulties solving the main objective for this book is to make available a self contained collection of modern research addressing the general bound constrained optimization problems in many real world applications using nature inspired optimization algorithms this book is suitable for a graduate class on optimization but will also be useful for interested senior students working on their research projects

Artificial Intelligence Techniques in Power Systems Operations and Analysis *2023-08-16*

an electrical power system consists of a large number of generation transmission and distribution subsystems it is a very large and complex system hence its installation and management are very difficult tasks an electrical system is essentially a very large network with very large data sets handling these data sets can require much time to analyze and subsequently implement an electrical system is necessary but also potentially very dangerous if not operated and controlled properly the demand for electricity is ever increasing so

maintaining load demand without overloading the system poses challenges and difficulties thus planning installing operating and controlling such a large system requires new technology artificial intelligence ai applications have many key features that can support a power system and handle overall power system operations ai based applications can manage the large data sets related to a power system they can also help design power plants model installation layouts optimize load dispatch and quickly respond to control apparatus these applications and their techniques have been successful in many areas of power system engineering artificial intelligence techniques in power systems operations and analysis focuses on the various challenges arising in power systems and how ai techniques help to overcome these challenges it examines important areas of power system analysis and the implementation of ai driven analysis techniques the book helps academicians and researchers understand how ai can be used for more efficient operation multiple ai techniques and their application are explained also featured are relevant data sets and case studies highlights include power quality enhancement by pv upqc for non linear load energy management of a nanogrid through flair of deep learning from iot environments role of artificial intelligence and machine learning in power systems with fault detection and diagnosis ac power optimization techniques artificial intelligence and machine learning techniques in power systems automation

Proceedings of International Joint Conference on Advances in Computational Intelligence *2022-05-18*

this book gathers outstanding research papers presented

at the 5th international joint conference on advances in computational intelligence ijcaci 2021 held online during october 23 24 2021 ijcaci 2021 is jointly organized by jahangirnagar university ju bangladesh and south asian university sau india the book presents the novel contributions in areas of computational intelligence and it serves as a reference material for advance research the topics covered are collective intelligence soft computing optimization cloud computing machine learning intelligent software robotics data science data security big data analytics and signal and natural language processing

THE BUSINESS OF BIOMIMICRY AND THE WISDOM OF LIVING ORGANISMS *2023-07-11*

the business of biomimicry involves drawing inspiration from living organisms and natural systems to solve human challenges and create sustainable innovations it is based on the idea that nature has evolved efficient and elegant solutions over millions of years and by emulating those solutions we can develop more sustainable and effective products processes and systems biomimicry offers several benefits in the business world first it provides a framework for sustainable innovation by studying how nature solves problems businesses can develop products and processes that are more resource efficient resilient and environmentally friendly this can lead to cost savings improved performance and a reduced ecological footprint second biomimicry promotes a shift toward regenerative design rather than just minimizing harm to the environment biomimicry encourages businesses to create positive impacts by emulating nature s capacity for regeneration and creating systems that support the health and well being of ecosystems third biomimicry fosters creativity and interdisciplinary collaboration

by looking at nature s strategies designers engineers and scientists can find novel and unexpected solutions to complex problems this interdisciplinary approach encourages collaboration across fields and fosters innovation overall the wisdom of living organisms as observed through biomimicry provides valuable insights and lessons that can inform business practices by emulating nature s solutions businesses can drive innovation create sustainable products and processes and contribute to a more regenerative and resilient economy

Proceedings of International Conference on ICT for Sustainable Development 2016-02-25

the two volumes of this book collect high quality peer reviewed research papers presented in the international conference on ict for sustainable development ict4sd 2015 held at ahmedabad india during 3 4 july 2015 the book discusses all areas of information and communication technologies and its applications in field for engineering and management the main focus of the volumes are on applications of ict for infrastructure e governance and contemporary technologies advancements on data mining security computer graphics etc the objective of this international conference is to provide an opportunity for the researchers academicians industry persons and students to interact and exchange ideas experience and expertise in the current trend and strategies for information and communication technologies

Applications of Artificial

Intelligence and Machine Learning
2021-07-27

the book presents a collection of peer reviewed articles from the international conference on advances and applications of artificial intelligence and machine learning icaaaiml 2020 the book covers research in artificial intelligence machine learning and deep learning applications in healthcare agriculture business and security this volume contains research papers from academicians researchers as well as students there are also papers on core concepts of computer networks intelligent system design and deployment real time systems wireless sensor networks sensors and sensor nodes software engineering and image processing this book will be a valuable resource for students academics and practitioners in the industry working on ai applications

Proceedings of the International Conference on Soft Computing Systems
2015-12-28

the book is a collection of high quality peer reviewed research papers presented in international conference on soft computing systems icscs 2015 held at noorul islam centre for higher education chennai india these research papers provide the latest developments in the emerging areas of soft computing in engineering and technology the book is organized in two volumes and discusses a wide variety of industrial engineering and scientific applications of the emerging techniques it presents invited papers from the inventors originators of new applications and advanced technologies

Nature-Inspired Algorithms for Big Data Frameworks *2018-09-28*

as technology continues to become more sophisticated mimicking natural processes and phenomena becomes more of a reality continued research in the field of natural computing enables an understanding of the world around us in addition to opportunities for manmade computing to mirror the natural processes and systems that have existed for centuries nature inspired algorithms for big data frameworks is a collection of innovative research on the methods and applications of extracting meaningful information from data using algorithms that are capable of handling the constraints of processing time memory usage and the dynamic and unstructured nature of data highlighting a range of topics including genetic algorithms data classification and wireless sensor networks this book is ideally designed for computer engineers software developers it professionals academicians researchers and upper level students seeking current research on the application of nature and biologically inspired algorithms for handling challenges posed by big data in diverse environments

Advances in Swarm Intelligence *2017-07-18*

the two volume set of lncs 10385 and 10386 constitutes the proceedings of the 8th international confrence on advances in swarm intelligence icsi 2017 held in fukuoka japan in july august 2017 the total of 133 papers presented in these volumes was carefully reviewed and selected from 267 submissions the paper were organized in topical sections as follows part i theories and models of swarm intelligence novel swarm based optimization algorithms particle swarm

optimization applications of particle swarm optimization ant colony optimization artificial bee colony algorithms genetic algorithms differential evolution fireworks algorithm brain storm optimization algorithm cuckoo searh and firefly algorithm part ii multi objective optimization portfolio optimization community detection multi agent systems and swarm robotics hybrid optimization algorithms and applications fuzzy and swarm approach clustering and forecast classification and detection planning and routing problems dialog system applications robotic control and other applications

Computational Intelligence in Image and Video Processing *2023-02-15*

computational intelligence in image and video processing presents introduction state of the art and adaptations of computational intelligence techniques and their usefulness in image and video enhancement classification retrieval forensics and captioning it covers an amalgamation of such techniques in diverse applications of image and video processing features a systematic overview of state of the art technology in computational intelligence techniques for image and video processing advanced evolutionary and nature inspired approaches to solve optimization problems in the image and video processing domain outcomes of recent research and some pointers to future advancements in image and video processing and intelligent solutions using computational intelligence techniques code snippets of the computational intelligence algorithm techniques used in image and video processing this book is primarily aimed at advanced undergraduates graduates and researchers in computer science and information technology engineers and industry professionals will also find this book

useful

Advanced Machine Learning with Evolutionary and Metaheuristic Techniques *2022-05-04*

this book presents the select proceedings of the conference of innovative product design and intelligent manufacturing system ipdims 2020 held at the national institute of technology rourkela india the book addresses latest methods and advanced tools from different areas of design and manufacturing technology the main topics covered include computational methods for robotics mechatronics and human computer interaction computer aided design manufacturing and engineering aesthetics ergonomics and ux ui design smart manufacturing and expert systems the contents of this book will be useful for researchers as well as professionals working in the areas of industrial design mechatronics robotics and automation

Applications of Computational Methods in Manufacturing and Product Design *2022-03-14*

this book consists of a collection of the high quality research articles in the field of computer vision and robotics which are presented in the international conference on computer vision and robotics cvr 2021 organized by bbd university lucknow india during 7 8 august 2021 the book discusses applications of computer vision and robotics in the fields like medical science defence and smart city planning the book presents recent works from researchers academicians industry and policy makers

Computer Vision and Robotics
2023-09-01

the text provides sustainable energy solutions using smart technologies such as artificial intelligence blockchain technology and the internet of things it further presents several case studies on applications of the internet of things artificial intelligence and blockchain technology in the field of sustainable energy focuses on the integration of smart technology including artificial intelligence and sustainable energy covers recent advancements in energy management techniques used in residential and commercial energy systems highlights the use of artificial intelligence machine learning and their applications in sustainable energy discusses important topics such as green energy grid modernization smart security in the power grid and fault diagnosis presents case studies on the applications of the internet of things blockchain and artificial intelligence in sustainable energy the text showcases the latest advancements and the importance of technologies including artificial intelligence blockchain and internet of things in achieving sustainable energy systems it further discusses the role of machine learning applied deep learning and edge computing in renewable energy the text cover key concepts such as intelligent battery management system energy trading green energy grid modernization electric vehicles and charging station optimization it will serve as an ideal reference text for senior undergraduate graduate students and academic researchers in the fields including electrical engineering electronics and communication engineering computer engineering and environmental engineering

Sustainable Energy Solutions with Artificial Intelligence, Blockchain Technology, and Internet of Things 2023-03-09

this book provides an overview of a wide range of relevant applications and reveals how to solve them many of the latest applications in finance technology education medicine and other important and relevant fields are data driven the volumes of data are enormous specific methods need to be developed or adapted to solve a particular problem it illustrates data science in applications these applications have in common the discovery of knowledge in data and the use of this knowledge to make real decisions the set of examples presented serves as a recipe book for their direct application to similar problems or as a guide for the development of new more sophisticated approaches the intended readership is data scientists looking for appropriate solutions to their problems in addition the examples provided serves as material for lectures at universities

Data Science in Applications *2023-05-16*

this book features selected papers presented at the 5th international conference on recent innovations in computing icric 2022 held on august 13 14 2022 organized by the elte hungary in association with knowledge university erbil and many academic and industry partners which includes european institute of data analytics eida dublin ireland and csrl lab india the book is second part of the two volumes and it includes the latest research in the areas of software

engineering cloud computing computer networks and internet technologies artificial intelligence information security database and distributed computing and digital india

Proceedings of International Conference on Recent Innovations in Computing *2017-12-21*

this book presents selected papers from international conference on intelligent and efficient electrical systems iciees 17 the volume brings together content from both industry and academia the book focuses on energy efficiency in electrical systems and covers en trende topics such as control of renewable energy systems the collaborative industry academia perspective of the conference ensures that equal emphasis is laid on novel topics and practical applications the contents of this volume will prove useful to researchers and practicing engineers alike

Intelligent and Efficient Electrical Systems *2019-02-07*

construction duration and schedule robustness are of great importance to ensure e cient construction however the current literature has neglected the importance of schedule robustness relatively little attention has been paid to schedule robustness via deviation of an activity s starting time which does not consider schedule robustness via structural deviation caused by the logical relationships among activities this leads to a possibility of deviation between the planned schedule and the actual situation

Optimization of Construction Duration and Schedule Robustness Based on Hybrid GreyWolf Optimizer with Sine Cosine Algorithm *2019-12-27*

this book constitutes the thoroughly refereed proceedings of the 10th international symposium isica 2018 held in jiujiang china in october 2018 the 32 full papers presented were carefully reviewed and selected from 83 submissions the papers are organized in topical sections on nature inspired computing bio inspired computing novel operators in evolutionary algorithms automatic object segmentation and detection and image colorization multilingual automatic document classication and translation knowledge based articial intelligence predictive data mining

Computational Intelligence and Intelligent Systems *2022-01-01*

technology in today s world has continued to develop into multifaceted structures the performance of computers specifically has significantly increased leading to various and complex problems regarding the dependability of these systems recently solutions for these issues have been based on soft computing methods however there lacks a considerable amount of research on the applications of these techniques within system dependability soft computing methods for system dependability is a collection of innovative research on the applications of these processing techniques for solving problems within the dependability of computer system performance this book will feature comparative experiences shared by researchers regarding the development of these technological solutions while

highlighting topics including evolutionary computing chaos theory and artificial neural networks this book is ideally designed for researchers data scientists computing engineers industrialists students and academicians in the field of computer science

Soft Computing Methods for System Dependability *2020-04-24*

this proceedings volume collects contributions from the 5th airo young workshop and airo phd school 2021 joint event on optimization and data science trends and applications held online from february 8 to 12 2021 the joint event was organized by airoyoung representatives and the operations research group of the department of electrical engineering and information technology of the university federico ii of naples the selected contributions represent the state of the art knowledge related to different branches of research such as data science machine learning and combinatorial optimization therefore this book is primarily addressed to researchers and phd students of the operations research community however due to its interdisciplinary content it will be of high interest for other closely related research communities moreover this volume not only presents theoretical results but also covers real applications in computer science engineering economics healthcare and logistics making it interesting for practitioners facing complex decision making problems in these areas

Optimization and Data Science: Trends and Applications *2020-08-27*

the use of optimization algorithms has seen an emergence in various professional fields due to its

ability to process data and information in an efficient and productive manner combining computational intelligence with these algorithms has created a trending subject of research on how much more beneficial intelligent inspired algorithms can be within companies and organizations as modern theories and applications are continually being developed in this area professionals are in need of current research on how intelligent algorithms are advancing in the real world thehandbook of research on advancements of swarm intelligence algorithms for solving real world problems is a pivotal reference source that provides vital research on the development of swarm intelligence algorithms and their implementation into current issues while highlighting topics such as multi agent systems bio inspired computing and evolutionary programming this publication explores various concepts and theories of swarm intelligence and outlines future directions of development this book is ideally designed for it specialists researchers academicians engineers developers practitioners and students seeking current research on the real world applications of intelligent algorithms

Handbook of Research on Advancements of Swarm Intelligence Algorithms for Solving Real-World Problems 2023-04-14

this book offers a collection of high quality peer reviewed research papers presented at the second international conference on communication and computational technologies iccct 2019 held at rajasthan institute of engineering and technology jaipur rajasthan india on 30 31 august 2019 in contributions prepared by researchers from academia and industry

alike the book discusses a wide variety of industrial engineering and scientific applications of emerging techniques

Proceedings of International Conference on Communication and Computational Technologies *2021-08-21*

this book gathers outstanding research papers presented in the 3rd international conference on artificial intelligence advances and application icaiaa 2022 held in poornima college of engineering jaipur india during april 23 24 2022 this book covers research works carried out by various students such as bachelor master and doctoral scholars faculty and industry persons in the area of artificial intelligence machine learning deep learning applications in health care agriculture and business security it also covers research in core concepts of computer networks intelligent system design and deployment real time systems wsn sensors and sensor nodes sdn nfv etc

Proceedings of 3rd International Conference on Artificial Intelligence: Advances and Applications *2022-02-22*

the book deals primarily with the aspects of advances in self potential geophysical data modeling different interpretation techniques new ideas and an integrated study to delineate the subsurface structures associated with exploration contamination buried paleochannels archaeological investigations glaciology geomorphology subsurface mapping and also in hydrocarbon exploration the book is specifically aimed with the state of art

information regarding research advances and new development in these areas of study coupled to extensive modelling and field investigations obtained from around the world it is extremely enlightening for the students research workers scientists faculty members in applied geophysics near surface geophysics potential field electrical and electromagnetic methods mathematical modeling techniques in earth sciences as well as environmental and other practical problems associated with earth sciences

Self-Potential Method: Theoretical Modeling and Applications in Geosciences *2020-01-03*

the three volume set lncs 13155 13156 and 13157 constitutes the refereed proceedings of the 21st international conference on algorithms and architectures for parallel processing ica3pp 2021 which was held online during december 3 5 2021 the total of 145 full papers included in these proceedings were carefully reviewed and selected from 403 submissions they cover the many dimensions of parallel algorithms and architectures including fundamental theoretical approaches practical experimental projects and commercial components and systems the papers were organized in topical sections as follows part i lncs 13155 deep learning models and applications software systems and efficient algorithms edge computing and edge intelligence service dependability and security algorithms data science part ii lncs 13156 software systems and efficient algorithms parallel and distributed algorithms and applications data science edge computing and edge intelligence blockchain systems deept learning models and applications iot part iii lncs 13157 blockchain systems data science distributed

and network based computing edge computing and edge intelligence service dependability and security algorithms software systems and efficient algorithms

Algorithms and Architectures for Parallel Processing 2022-04-21

though traditionally information systems have been centralized these systems are now distributed over the web this requires a re investigation into the way information systems are modeled and designed because of this new function critical problems including security never fail systems and quality of service have begun to emerge novel approaches to information systems design is an essential publication that explores the most recent cutting edge research in information systems and exposes the reader to emerging but relatively mature models and techniques in the area highlighting a wide range of topics such as big data business intelligence and energy efficiency this publication is ideally designed for managers administrators system developers information system engineers researchers academicians and graduate level students seeking coverage on critical components of information systems

Novel Approaches to Information Systems Design 2020-03-04

this book presents best selected papers presented at the second international conference on emerging technologies for computing communication and smart cities etccs 2021 held on 21 22 august 2021 at bfcet punjab india iei india members supported externally it is co organized by southern federal university russia university of jan wyżykowski ujw polkowice poland sd college of engineering technology muzaffarnagar nagar

india as an academic partner and csi india for technical support the book includes current research works in the areas of network and computing technologies wireless networks and internet of things iot futuristic computing technologies communication technologies security and privacy

Emerging Technologies for Computing, Communication and Smart Cities *2023-11-17*

this book includes high impact papers presented at the international conference on communication computing and electronics systems 2019 held at the ppg institute of technology coimbatore india on 15 16 november 2019 discussing recent trends in cloud computing mobile computing and advancements of electronics systems the book covers topics such as automation vlsi embedded systems integrated device technology satellite communication optical communication rf communication microwave engineering artificial intelligence deep learning pattern recognition internet of things precision models bioinformatics and healthcare informatics

International Conference on Communication, Computing and Electronics Systems *2023-02-16*

this book constitutes the proceedings of the first international conference dsai 2023 held in bangkok thailand during november 27 30 2023 the 22 full papers and the 4 short papers included in this volume were carefully reviewed and selected from 70 submissions this volume focuses on ideas methodologies and cutting

edge research that can drive progress and foster interdisciplinary collaboration in the fields of data science and artificial intelligence

Data Science and Artificial Intelligence *2023-08-23*

this book gathers outstanding papers presented at the international conference on data science and applications icdsa 2022 organized by soft computing research society scrs and jadavpur university kolkata india from 26 to 27 march 2022 it covers theoretical and empirical developments in various areas of big data analytics big data technologies decision tree learning wireless communication wireless sensor networking bioinformatics and systems artificial neural networks deep learning genetic algorithms data mining fuzzy logic optimization algorithms image processing computational intelligence in civil engineering and creative computing

Proceedings of International Conference on Data Science and Applications *2023-09-13*

this book includes the original peer reviewed research papers from the 10th frontier academic forum of electrical engineering fafee 2022 held in xi an china in august 2022 it gathers the latest research innovations and applications in the fields of electrical engineering the topics it covers include electrical materials and equipment electrical energy storage and device power electronics and drives new energy electric power system equipment intellisense and intelligent equipment biological electromagnetism and its applications and insulation and discharge

computation for power equipment given its scope the book benefits all researchers engineers and graduate students who want to learn about cutting edge advances in electrical engineering

The proceedings of the 10th Frontier Academic Forum of Electrical Engineering (FAFEE2022) 2020-10-23

the two volume set lnai 14125 and 14126 constitutes the refereed conference proceedings of the 22nd international conference on artificial intelligence and soft computing icaisc 2023 held in zakopane poland during june 18 22 2023 the 84 revised full papers presented in these proceedings were carefully reviewed and selected from 175 submissions the papers are organized in the following topical sections part i neural networks and their applications evolutionary algorithms and their applications and artificial intelligence in modeling and simulation part ii computer vision image and speech analysis various problems of artificial intelligence bioinformatics biometrics and medical applications and data mining and pateern classification

Artificial Intelligence and Soft Computing *2023-02-23*

deep learning includes a subset of machine learning for processing the unsupervised data with artificial neural network functions the major advantage of deep learning is to process big data analytics for better analysis and self adaptive algorithms to handle more data when applied to engineering deep learning can have a great impact on the decision making process deep learning applications and intelligent decision making in

engineering is a pivotal reference source that provides
practical applications of deep learning to improve
decision making methods and construct smart
environments highlighting topics such as smart
transportation e commerce and cyber physical systems
this book is ideally designed for engineers computer
scientists programmers software engineers research
scholars it professionals academicians and postgraduate
students seeking current research on the implementation
of automation and deep learning in various engineering
disciplines

Deep Learning Applications and Intelligent Decision Making in Engineering 2023-03-13

100 optimization techniques is intended as a handbook
for optimization techniques optimization techniques and
algorithms are methods used to find the most efficient
solution to a problem different techniques and
algorithms may be used to solve a particular problem
depending on the nature of the problem researchers from
varieties of domains are using optimization algorithms
to solve problems in their domain different
optimization techniques have their pros and cons this
book serves as a handbook for researchers who wants to
know about different optimization methods currently
available and their operating principles one hundred
optimization techniques are arranged in an alphabetical
order researchers and students who want to use
different optimization techniques for solving their
domain related problems will find this book helpful

100 Optimization Techniques

2018-03-15

discusses all the major tools and techniques for decision support system supported by examples techniques are explained considering their deterministic and stochastic aspects covers network tools including gert and q gert explains application of both probability and fuzzy orientation in the pertinent techniques includes a number of relevant case studies along with a dedicated chapter on software

Decision Support System *2022-11-09*

this book includes recent research on hybrid intelligent systems it presents 35 selected papers from the 17th edition of the international conference on hybrid intelligent systems his which was held in delhi india from december 14 to 16 2017 reflecting the awareness in the respective academic communities that combined approaches are essential to solving the remaining tough problems in computational intelligence the his is a premier conference focused on the hybridization of intelligent systems the book offers a valuable reference guide for all researchers students and practitioners in the fields of computer science and engineering
