Current Housing Reports 1991 nina mazar examines the effects of an interactive tool that can tailor information extremely fast the interactive comparison matrix cm it provides product related information in a product by attribute matrix and allows products to be sorted by any attribute the author shows that the interactive cm has the potential to represent a useful and practicable solution matching the needs of both consumers and online retailers

Operational Amplifiers Databook 1993 this two volume book provides a comprehensive analysis of the lawfulness of the use of nuclear weapons based on existing international law established facts as to nuclear weapons and their effects and nuclear weapons policies and plans of the united states based on detailed analysis of the facts and law professor moxley shows that the united states arguments that uses of nuclear weapons including low yield nuclear weapons could be lawful do not withstand analysis moxley opens by examining established rules of international law governing the use of nuclear weapons first analyzing this body of law based on the united states own statements of the matter and then extending the analysis to include requirements of international law that the united states overlooks in its assessment of the lawfulness of potential nuclear weapons uses he then develops in detail the known facts as to nuclear weapons and their consequences and u s policies and plans concerning such matters he describes the risks of deterrence and the existential nature of the effects of nuclear war on human life and civilization he proceeds to pull it all together applying the law to the facts and demonstrating that known nuclear weapons effects cannot comply with such legal requirements as those of distinction

proportionality necessity precaution the corollary requirement of controllability and the law of reprisal moxley shows that when the united states goes to apply international law to potential nuclear weapons uses it distorts the law as it has itself articulated it overlooks law in such areas as causation risk analysis mens rea and per se rules and disregards known risks as to nuclear weapons effects including radioactive fallout nuclear winter electromagnetic pulses and potential escalation he then shows that the policy of deterrence is unlawful because the use of such weapons would be unlawful moxley urges that the united states and other nuclear weapons states take heed of the requirements of international law as to nuclear weapons threat and use he argues that law can be a positive force in society s addressing existential risks posed by nuclear weapons and the policy of nuclear deterrence

Woodcroft** 1876 recent years have seen important developments in the computer and game industry including the emergence of the concept of serious games it is hypothesized that tools such as games virtual reality or applications for smartphones may foster learning enhance motivation promote behavioral change support psychotherapy favor empowerment and improve some cognitive functions computers and games may create supports for training or help people with cognitive emotional or behavioral change games take various formats from board games to informatics to games with interactive rules of play similarly computer tools may vary widely in format from self help or assisted computerized training to virtual reality or applications for smartphones some tools that may be helpful for mental health were specifically designed for that goal whereas others were not gamification of computer related products and games with a numeric format tend to reduce the gap between games and computers tools and increase the conceptual synergy in such fields games and computer design share an opportunity for creativity and innovation to help create specifically design and assess preventive or therapeutic tools computers and games share a design conception that allows innovative approaches to overcome barriers of the real world by creating their own rules yet despite the potential interest in such tools to improve treatment of mental disorders and to help prevent them the field remains understudied and information is under disseminated in clinical practice some studies have shown however that there is potential interest and acceptability of tools that support various vehicles rationales objectives and formats these tools include traditional games e g chess games popular electronic games board games computer based interventions specifically designed for psychotherapy or cognitive training virtual reality apps for smartphones and so forth computers and games may offer a true opportunity to develop assess and disseminate new prevention and treatment tools for mental health and well being currently there is a strong need for state of the art information to answer questions such as the following why develop such tools for mental health and well being what are the potential additions to traditional treatments what are the best strategies or formats to improve the possible impact of these tools are such tools useful as a first treatment step what is the potential of a hybrid model of care that combines traditional approaches with games and or computers as tools what games and applications have already been designed and studied what is the evidence from previous studies how can such tools be successfully designed for mental health and well being what is rewarding or attractive for patients in using such treatments what are the worldwide developments in the field are some protocols under development what are the barriers and

challenges related to such developments how can these tools be assessed and how can the way that they work and for whom be measured are the potential benefits of such products specific or can these additions be attributed to nonspecific factors what are the users views on such tools what are the possible links between such tools and social networks is there a gap between evidence based results and market development are there any quality challenges what future developments and studies are needed in the field
