crystal alberta was established to research ways to improve students understanding and reasoning in science and mathematics to accomplish this goal faculty members in education science and engineering as well as school teachers joined forces to produce a resource bank of innovative and tested instructional materials that are transforming teaching in the k 12 classroom many of the instructional materials cross traditional disciplinary boundaries and explore contemporary topics such as global climate change and the spread of the west nile virus combined with an emphasis on the use of visualizations the instructional materials improve students engagement with science and mathematics participation in the crystal alberta project has changed the way i think about the connection between what i do as a researcher and what i do as a teacher i have learned how to better translate scientific knowledge into language and activities appropriate for students thereby transforming my own teaching i also have learned to make better connections between what students are learning and what is happening in their lives and the world thereby increasing students interest in the subject and enriching their learning experience

The Natural Gas Industry

2017-05-18

the assessment of greenhouse gases emitted to and removed from the atmosphere is high on the international political and scientific agendas growing international concern and cooperation regarding the climate change problem have increased the need for policy oriented solutions to the issue of uncertainty in and related to inventories of greenhouse gas ghg emissions the approaches to addressing uncertainty discussed here reflect attempts to improve national inventories not only for their own sake but also from a wider systems analytical perspective a perspective that seeks to strengthen the

usefulness of national inventories under a compliance and or global monitoring and reporting framework these approaches demonstrate the benefits of including inventory uncertainty in policy analyses the authors of the contributed papers show that considering uncertainty helps avoid situations that can for example create a false sense of certainty or lead to invalid views of subsystems this may eventually prevent related errors from showing up in analyses however considering uncertainty does not come for free proper treatment of uncertainty is costly and demanding because it forces us to make the step from simple to complex and only then to discuss potential simplifications finally comprehensive treatment of uncertainty does not offer policymakers quick and easy solutions
