#### What is a Mathematical Concept?

2017-06-22

leading thinkers in mathematics philosophy and education offer new insights into the fundamental question what is a mathematical concept

#### Applied Mathematics, Modeling and Computer Simulation

2024-01-19

applied mathematics modelling and computer simulation are central to many aspects of engineering and computer science and continue to be of intrinsic importance to the development of modern technologies this book presents the proceedings of ammcs 2023 the 3rd international conference on applied mathematics modeling and computer simulation held on 12 and 13 august 2023 in wuhan china the conference provided an ideal opportunity for scholars and researchers to communicate important recent developments in their areas of specialization to their colleagues and to scientists in related disciplines more than 250 submissions were received for the conference of which 133 were selected for presentation at the conference and inclusion here after a thorough peer review process these range from the theoretical and conceptual to strongly pragmatic papers addressing industrial best practice and cover topics such as mathematical modeling and application engineering applications and scientific computations and the simulation of intelligent systems the book explores practical experiences and enlightening ideas and will be of interest to researchers practitioners and to all those working in the fields of applied mathematics modeling and computer simulation

this book provides the proceedings of the 5th international conference on cyber security intelligence and analytics the 5th international conference on cyber security intelligence and analytics csia 2023 is an international conference dedicated to promoting novel theoretical and applied research advances in the interdisciplinary agenda of cyber security particularly focusing on threat intelligence and analytics and countering cybercrime cyber security experts including those in data analytics incident response and digital forensics need to be able to rapidly detect analyze and defend against a diverse range of cyber threats in near real time conditions we are organizing the csia 2023 at radisson blu shanghai pudong jinqiao hotel it will feature a technical program of refereed papers selected by the international program committee keynote address

## Cyber Security Intelligence and Analytics

this book features the latest theoretical results and techniques in the field of guidance navigation and control gnc of vehicles and aircraft it covers a range of

topics including but not limited to intelligent computing communication and control new methods of navigation estimation and tracking control of multiple moving objects manned and autonomous unmanned systems guidance navigation and control of miniature aircraft and sensor systems for guidance navigation and control presenting recent advances in the form of illustrations tables and text it also provides detailed information of a number of the studies to offer readers insights for their own research in addition the book addresses fundamental concepts and studies in the development of gnc making it a valuable resource for both beginners and researchers wanting to further their understanding of guidance navigation and control

these volumes contain papers from the third international conference on hyperbolic

problems which was held on june 11 15 1990 in uppsala sweden the conference reflected the current vitality of research in hyperbolic problems and the interaction between theory numerical methods and applications most of the papers deal with non linear problems this is particularly true for the applications where fluid mechanics dominates

integer prograw ing is one of the most fascinating and difficult areas in the field of mathematical optimization due to this fact notable research contributions to integer programming have been made in very different branches of mathematics and its applications since these publications are scattered over many journals proceedings volumes monographs and working papers a comprehensive bibliography of all these sources is a helpful tool even for specialists in this field i initiated this compilation of literature in 1970 at the institut fur konometrie und operations research university of bonn since then many collaborators have contributed to and worked on it among them dipl math claus kastning has done the bulk of the work with great perseverance and diligence he has gathered all the material and checked it with the original sources the main aim was to incorporate rare and not easily accessible sources like russian journals preprints or unpublished papers without the invaluable and dedicated engagement of claus kastning the bibliography would never have reached this final version for this reason he must be considered its responsible editor as with any other collection this literature list has a subjective viewpoint and may be in some sense incomplete we have however tried to be as complete as possible the bibliography contains 4704 different publications by 6767 authors which were classified by 11839 descriptor entries
