explanatory writing published in 1999 this work sets out to give an account of explanation which is adequate to the problems that arise when looking at physical science it offers a theory of explanation with supporting analysis and also an application to the task of giving an account of explanation in quantum mechanics henderson examines the foundations of an analytic social science approach to develop a well integrated account of the human sciences focusing on the pivotal notions of interpretation and explanation the author acknowledges the importance of interpretive understanding in the human sciences and proposes a methodology that reflects both interpretive practice as well as scientific methodology he refutes the methodological separatists who hold that the logic of explanation and testing in the human sciences is fundamentally different from that of the natural sciences and examines in detail the constraints on interpretation in providing an integrated treatment of these two central issues in social science henderson offers a thorough analysis of the adequacy of interpretation and the nature of explanation in the human sciences explanations are important to us in many contexts in science mathematics philosophy and also in everyday and juridical contexts but what is an explanation in the philosophical study of explanation there

is long standing influential tradition that links explanation intimately to causation we often explain by providing accurate information about the causes of the phenomenon to be explained such causal accounts have been the received view of the nature of explanation particularly in philosophy of science since the 1980s however philosophers have recently begun to break with this causal tradition by shifting their focus to kinds of explanation that do not turn on causal information the increasing recognition of the importance of such non causal explanations in the sciences and elsewhere raises pressing questions for philosophers of explanation what is the nature of non causal explanations and which theory best captures it how do non causal explanations relate to causal ones how are non causal explanations in the sciences related to those in mathematics and metaphysics this volume of new essays explores answers to these and other questions at the heart of contemporary philosophy of explanation the essays address these questions from a variety of perspectives including general accounts of non causal and causal explanations as well as a wide range of detailed case studies of non causal explanations from the sciences mathematics and metaphysics carl g Hempel exerted greater influence upon philosophers of science than

any other figure during the 20th century in this far reaching collection distinguished philosophers contribute valuable studies that illuminate and clarify the central problems to which Hempel was devoted the essays enhance our understanding of the development of logical empiricism as the major intellectual influence for scientifically oriented philosophers and philosophically minded scientists of the 20th century this is the first work to condense the large literature on explanatory style one's tendency to offer similar sorts of explanations for different events this cognitive variable has been related to psychopathology physical health achievement and success compiled by experts in the fields of depression anxiety psychoneuroimmunology and motivation this volume details our current level of understanding outlines gaps in our knowledge and discusses the future directions of the field data from a vast number of studies are presented including results from studies not previously reported coverage includes sections on cross cultural comparisons life span and development issues and gender differences and an extensive description of the measurement of explanatory style offering questionnaire and content analysis methods for children college populations and adults this work is thus a valuable tool for anyone involved in research on

the etiology and treatment of depression cognitive therapy motivation and emotion and the link between physical and psychological well being the revised and updated 11th edition of this review book provides 700 multiple choice questions with enlarged explanatory answers referenced to widely adopted texts subject areas are based in the content of the usmle step 2 the thoroughly revised updated 2nd edition of the ebook 2100 mcqs with explanatory notes for general science has been divided into 6 chapters which have been further divided into 29 topics containing 2100 multiple choice questions for quick revision and practice the unique selling proposition of the book is the explanation to each and every question which provides additional info to the students on the subject of the questions and correct reasoning wherever required the questions have been selected on the basis of the various types of questions being asked in the various exams first published in 1986 in the age of the computer conjecture about things mechanical has naturally led to the question of whether machines can think as the emphasis on artificial intelligence ai has grown rapidly questions about machine intelligence have begun to have a certain urgency the question we are concerned with in this book is if we can find a set of processes that machines can slavishly follow and if by

so doing these machines can come up with creative thoughts what would that tell us about human beings if the machine s procedure was adapted from a human procedure that is if all the machine was doing was what we know people are doing would we abandon our inherent skepticism about the abilities of machines or would we demystify our inherent admiration for things human in a sense these are the issues dealt with in this book the author says in a sense because this book is no way a philosophical treatise rather it is an exercise in artificial intelligence and in cognitive science it is an attempt to come to understand one of the most complex problems of mind by examining some of the mechanisms of mind to define the apparatus that underlies our ability to think medical education and the tools used for assessment are continually evolving single best answer sba questions are a relatively new method of assessment commonly encountered in final surgical exams the key to success in any sba style examination is practice practice and more practice with nearly 300 structured questions this book comprehensively covers the surgical curriculum each specialty specific chapter contains a combination of clinical vignettes and knowledge based questions of varying degrees of difficulty both challenging the more able candidates as well as giving

a realistic appreciation of the standard required to pass each question gives a detailed explanation of the correct answer to aid reflection and reinforce understanding this book is the ideal revision aid for all undergraduate medical students preparing for their final examination in surgery in addition doctors studying for the membership of the royal college of surgeons mrcs and the professional and linguistic assessment board plab examinations will also find this book extremely useful first published in 1994 routledge is an imprint of taylor francis an informa company this collection brings together a set of new papers that advance the debate concerning the nature of explanation in mind and brain science and help to clarify the prospects for bonafide integration across these fields long a topic of debate among philosophers and scientists alike there is growing appreciation that understanding the complex relationship between the psychological sciences and the neurosciences especially how their respective explanatory frameworks interrelate is of fundamental importance for achieving progress across these scientific domains traditional philosophical discussions tend to construe the relationship between them in stark terms either they are related in terms of complete independence i e autonomy or complete dependence i e

reduction leaving little room for more interesting relations such as that of mutually beneficial interaction or integration a unifying thread across the diverse set of contributions to this volume is the rejection of the assumption that no stable middle ground exists between these two extremes and common embrace of the idea that these sciences are partially dependent on or constrained by one another by addressing whether the explanatory patterns employed across these domains are similar or different in kind and to what extent they inform and constrain each another this volume helps to deepen our understanding of the prospects for successfully integrating mind and brain science these provocative essays by leading philosophers of science exemplify and illuminate the contemporary uncertainty and excitement in this changing field the papers are rich in new perspectives and their far reaching criticisms challenge arguments long prevalent in classic philosophical problems of induction empiricism and realism by turns empirical or analytic historical or programmatic confessional or argumentative the authors arguments both describe and demonstrate the fact that philosophy of science is in a ferment more intense than at any time since the heyday of logical positivism seventy years ago since the ground breaking work of saul

kripke david lewis and others in the 1960s and 70s one dominant interest of analytic philosophers has been in modal truths which concerns the questions of what is possible and what is necessary however there is considerable controversy over the source and nature of necessity in modality and explanatory reasoning boris kment takes a novel approach to the study of modality that places special emphasis on understanding the origin of modal notions in everyday thought kment argues that the concepts of necessity and possibility originate in a common type of thought experiment counterfactual reasoning that allows us to investigate explanatory connections this procedure is closely related to the controlled experiments of empirical science necessity is defined in terms of causation and other forms of explanation such as grounding the relation that connects metaphysically fundamental facts to non fundamental ones therefore contrary to a widespread view explanation is more fundamental than modality the study of modal facts is important for philosophy not because these facts are of much metaphysical interest in their own right but because they provide evidence about explanatory relationships in the course of developing this position the book offers new accounts of possible worlds counterfactual conditionals essential truths and their role in

grounding and a novel theory of how counterfactuals relate to causation and explanation an expansive yet succinct analysis of the philosophy of religion from metaphysics through theology organized into two sections the text first examines truths concerning what is possible and what is necessary these chapters lay the foundation for the book's second part the search for a metaphysical framework that permits the possibility of an ultimate explanation that is correct and complete a cutting edge scholarly work which engages with the traditional metaphysician's quest for a true ultimate explanation of the most general features of the world we inhabit develops an original view concerning the epistemology and metaphysics of modality or truths concerning what is possible or necessary applies this framework to a re-examination of the cosmological argument for theism defends a novel version of the leibnizian cosmological argument single best answer style questions are increasingly popular in medical examinations and can be challenging more than one answer may at first appear correct creating pitfalls for the unwary this book has been written for medical students throughout their clinical years including a mixture of clinical and basic science questions that cover the essential topics of surgery the questions test and reaffirm knowledge through clinical

scenarios making the subject matter engaging enjoyable and memorable  
explanatory answers both aid learning and help candidates identify  
areas where further revision is needed

## ***MCQs in Anatomy with Explanatory Answers***

2006-06-20

compiled with an aim to answer the questions related to mcqs in anatomy

## **ENT MCQs for Medical Students**

2017-06-30

ear nose and throat ent surgery has traditionally been a difficult and specialised topic in undergraduate medicine and for junior doctors many textbooks are too detailed for undergraduate use or lack self assessment questions to help those wishing to underpin their learning this concise and easy to read self assessment guide aims to clarify the topic and find and fill gaps in understanding the multiple choice questions mcqs contained cover all levels of knowledge and the learning objectives of most of the uk medical school curricula aiding preparation for end of unit module and final exams for ent this book

will be a valuable companion for clinics and teaching sessions and an indispensable revision primer for graduate entry medical curricula an excellent means of preparation for medical undergraduate examinations as gaps in core knowledge are quickly revealed further this text is a good guide for students to identify those subject areas requiring more focused study especially when time is short from the foreword by samir soma

## **Behavioral Sciences**

1989

this is volume ii of twenty two of the social theory and methodology series originally published in 1963 the present study has as its aim the discussion of certain questions of philosophical interest as they come to be imbedded in the work of social scientists it is intended to be an essay which might be of interest to the practising scientist

## **An Explanation of the Collects, by Way of Question and Answers, with Practical Addresses, Etc**

1860

the book 2000 mcqs with explanatory notes for history has been divided

into 4 chapters which have been further divided into 31 topics containing 2000 multiple choice questions for quick revision and practice the unique selling proposition of the book is the explanation to each and every question which provides additional info to the students on the subject of the questions and correct reasoning wherever required the questions have been selected on the basis of the various types of questions being asked in the various exams

## **Explanation in Social Science**

2013-10-15

this book presents a unified and systematic philosophical account of human actions and their explanation and it does it in the spirit of scientific realism in addition various other related topics such as psychological concept formation and the nature of mental events and states are discussed this is due to the fact that the key problems in the philosophy of psychology are interconnected to a high degree this interwovenness has affected the discussion of these problems in that often the same topic is discussed in several contexts in the book i

hope the reader does not find this too frustrating the theory of action developed in this book especially in its latter half is a causalist one in a sense it can be regarded as an explication and refinement of a typical common sense view of actions and the mental episodes causally responsible for them it has of course not been possible to discuss all the relevant philosophical problems in great detail even if i have regarded it as necessary to give a brief treatment of relatively many problems rather i have concentrated on some key issues and hope that future research will help to clarify the rest

## **2000+ MCQs with Explanatory Notes For HISTORY**

2018-03-31

the book 1400 mcqs with explanatory notes for general knowledge has been divided into 18 chapters which have been further divided into 44 topics containing 1400 multiple choice questions for quick revision and practice the unique selling proposition of the book is the explanation to each and every question which provides additional info

# **Understanding, Explanation, and Scientific Knowledge**

2017-10-05

published in 1999 this work sets out to give an account of explanation which is adequate to the problems that arise when looking at physical science it offers a theory of explanation with supporting analysis and also an application to the task of giving an account of explanation in quantum mechanics

# **Wiley CPAexcel Exam Review 2014 Study Guide**

2013-11-08

henderson examines the foundations of an analytic social science approach to develop a well integrated account of the human sciences focusing on the pivotal notions of interpretation and explanation the author acknowledges the importance of interpretive understanding in

the human sciences and proposes a methodology that reflects both interpretive practice as well as scientific methodology he refutes the methodological separatists who hold that the logic of explanation and testing in the human sciences is fundamentally different from that of the natural sciences and examines in detail the constraints on interpretation in providing an integrated treatment of these two central issues in social science henderson offers a thorough analysis of the adequacy of interpretation and the nature of explanation in the human sciences

**The Church catechism explain'd, by way of question and answer; and confirmed by Scripture proofs. To which is added, a section on Confirmation**

1751

explanations are important to us in many contexts in science mathematics philosophy and also in everyday and juridical contexts but

what is an explanation in the philosophical study of explanation there is long standing influential tradition that links explanation intimately to causation we often explain by providing accurate information about the causes of the phenomenon to be explained such causal accounts have been the received view of the nature of explanation particularly in philosophy of science since the 1980s however philosophers have recently begun to break with this causal tradition by shifting their focus to kinds of explanation that do not turn on causal information the increasing recognition of the importance of such non causal explanations in the sciences and elsewhere raises pressing questions for philosophers of explanation what is the nature of non causal explanations and which theory best captures it how do non causal explanations relate to causal ones how are non causal explanations in the sciences related to those in mathematics and metaphysics this volume of new essays explores answers to these and other questions at the heart of contemporary philosophy of explanation the essays address these questions from a variety of perspectives including general accounts of non causal and causal explanations as well as a wide range of detailed case studies of non causal explanations from the sciences mathematics and metaphysics
