conform pathology content to the new american board of urology requirements in dentistry bonding is a term conventionally used to describe the use of an adhesive or cement to hold a covering to a stained or damaged tooth or to secure orthodontic appliances to the teeth the evolution of orthodontic materials in the past five decades has been a unique progress curve characterized by periods of intense activity with many developments followed by long quiescent intervals even though acid etch technique was introduced in the mid 1950s it took more than a decade for this practice to become a standard procedure in orthodontics on a large scale in fact orthodontic bonding has advanced more in the last ten years than in the last quarter of the century like unprecedented progress with materials and technique such as glass ionomer bonding self etching primers new powerful light curing sources etc the rapid pace of advancement in the field continues to challenge the clinicians to stay abreast in the race with technology this speedy advancement in the material science has also altered the commercial life of the materials as new material introduced a few years ago soon becomes obsolete this is a possible outcome of a lack of strenuous quality control research deficiencies and a product of aggressive marketing strategy by the commercial product companies thus an evidence based approach must extend to orthodontic bonding materials with emphasis on the mechanical physical and biological properties and the potential alterations induced by intra oral aging and their implications in orthodontic mechanotherapy in recent decades scientists and engineers around the globe have been responding to the requirement of high performance materials through innovative material research and engineering the ever increasing demand on quality and reliability has resulted in some dazzling technological achievements in the area of advanced materials and manufacturing the purpose of this book is to bring together significant findings of leading experts in developing and improving the technology that supports advanced materials and process development from gold nano structures to advanced superalloys this book covers investigations involving modern computer based approaches as well as traditional experimental techniques selected articles include research findings on parallel processing in digital control is a volume to be published in the new advances in industrial control series edited by professor m j grumble and dr m a johnson of the industrial control unit university of strathclyde the growing complexity of digital control systems in such areas as robotics flight control and engine control has created a demand for faster and more reliable systems this book examines how parallel processing can satisfy these requirements following a survey of parallel computer architectures mimd multiple instruction multiple data machines are identified as suitable systems for digital control problems which are characterised by a mixture of regular and irregular algorithmic tasks an example of a typical mimd architecture suitable for real time control the inmos transputer is introduced together with its associated parallel programming language occam the key problem in implementing parallel software is associated with mapping parallel tasks onto physical processors in this book a variety of schemes are described and assessed to help illustrate potential areas of difficulty for the real time control software engineer solutions are proposed and tested on a flight control case study example recognising the widespread acceptance of matlab and its derivatives for computer aided control system design this book demonstrates how mapping strategies can be realised in this environment and integrated with a transputer development system for on line performance evaluation a case study example demonstrates the power of this approach and important issues are highlighted readers will experience the advantages of parallel processing in digital control while being made aware of the key factors to be considered in the development of an effective solution practising control engineers and graduate post graduate students will find the book of particular interest and benefit
