interviews managing information within the enterprise has always been a vital and important task to support the day to day business operations and to enable analysis of that data for decision making to better manage and grow the business for improved profitability to do all that clearly the data must be accurate and organized so it is accessible and understandable to all who need it that task has grown in importance as the volume of enterprise data has been growing significantly analyst estimates of 40 50 growth per year are not uncommon over the years however most of that data has been what we call structured data which is the type that can fit neatly into rows and columns and be more easily analyzed now we are in the era of big data this significantly increases the volume of data available but it is in a form called unstructured data that is data from sources that are not as easily organized such as data from emails spreadsheets sensors video audio and social media sites there is valuable information in all that data but it calls for new processes to enable it to be analyzed all this has brought with it a renewed and critical need to manage and organize that data with clarity of meaning understandability and interoperability that is you must be able to integrate this data when it is from within an enterprise but also importantly when it is from many different external sources what is described here has been and is being done to varying extents it is called information governance governing this information however has proven to be challenging but without governance much of the data can be less useful and perhaps even used incorrectly significantly impacting enterprise decision making so we must also respect the needs for information security consistency and validity or else suffer the potential economic and legal consequences implementing sound governance practices needs to be an integral part of the information control in our organizations this ibm redbooks publication focuses on the building blocks of a solid governance program it examines some familiar governance initiative scenarios identifying how they underpin key governance initiatives such as master data management quality management security and privacy and information lifecycle management ibm information management and governance solutions provide a A Framework of Human Systems Engineering

all too often the assessment of structural vulnerability is thought of only in terms of security upgrades guards and entrance barriers however in order to fully ensure that a building is secure the process of design and construction must also be considered building vulnerability assessments industrial hygiene and engineering concepts focuses on the range of vulnerabilities that can and should be addressed from design implementation through securing a building from intrusion from all types of threats customized recommendations for individual structures the book begins with an outline for vulnerability assessments conducted either in house or in coordination with a third party the text is presented in a way that facilitates modifications for an organization s particular needs the authors present summaries of regulations that are used to determine if chemicals create a risk to off site locations or constitute a homeland security vulnerability they also discuss physical security and chemical biological and radioactive cbr threat potentials highlights the threat of biological contamination the remainder of the book discusses control systems to reduce vulnerabilities emphasizing ventilation system controls since a building or facility which is already contaminated is easier to contaminate further the authors put a heavy focus on new latent and residual chemical and biological contamination within building infrastructures the book concludes by presenting basic emergency planning recommendations and offering recommendations for assessment programs and emergency drills this volume comprising the wisdom of scientists and engineers who have dealt in the past with building and site failures assists future designers and operations and emergency planners in making decisions that may lessen the impact of emergencies

and help to prevent them from occurring in the first place by taking a multi faceted approach to building security those charged with protecting a structure s vulnerability can help to ensure that crisis is averted
