The Discovery of a Visual System 2019-05-23 this book is the only account of what honeybees actually see bees detect some visual features such as edges and colours but there is no sign that they reconstruct patterns or put together features to form objects bees detect motion but have no perception of what it is that moves and certainly they do not recognize things by their shapes yet they clearly see well enough to fly and find food with a minute brain bee vision is therefore relevant to the construction of simple artificial visual systems for example for mobile robots the surprising conclusion is that bee vision is adapted to the recognition of places not things in this volume adrian horridge also sets out the curious and contentious history of how bee vision came to be understood with an account of a century of neglect of old experimental results errors of interpretation sharp disagreements and failures of the scientific method the design of the experiments and the methods of making inferences from observations are also critically examined with the conclusion that scientists are often hesitant imperfect and misleading ignore the work of others and fail to consider alternative explanations the erratic path to understanding makes interesting reading for anyone with an interest in the workings of science but particularly those researching insect vision and invertebrate sensory systems

Stealth Conflicts 2016-12-05 many of the world's deadliest conflicts are largely ignored becoming off the radar stealth conflicts how can this be possible in a world with unprecedented levels of access to information and unprecedented levels of attention and resources being devoted to foreign affairs virgil hawkins reveals and explains the highly distorted and assimilated responses to foreign conflicts by major actors in the world he examines the agenda setting processes of policy makers the media the public and academics in relation to foreign conflicts using a vast array of detailed examples he systematically unravels the internal dynamics and external influences experienced by these actors and in so doing he brings the academic agenda into the loop of the conflict response agenda setting process for the first time with agenda setting research tending to focus on the question of why a response to a particular event or issue occurred this book furthers research by focusing equally on why a response did not occur the volume is critically important in understanding why actors do and do not respond to foreign conflicts
