Recording Historic Structures 2003-12-01

this new edition of the definitive guide to recording america's built environment provides a detailed reference to the recording methods and techniques that are fundamental tools for examining any existing structure edited by the deputy chief of the historic american building survey historic american engineering record this revised edition includes information on recent technological advances such as laser scanning new case studies and expanded material on the documentation of historic landscapes

Diagnosis of Heritage Buildings by Non-Destructive Techniques 2024-04-22

besides their notable historical and cultural significance heritage buildings crucially contribute to the economy of those countries that rely heavily on the tourism industry investigation and monitoring of the origins of deterioration and damage are therefore key to the preservation of architectural heritage diagnosis of heritage buildings by non-destructive techniques offers an up to date overview of state of the art knowledge by collating specialized studies written by an international group of experts in the field while also examining the value of these non-intrusive methods through a number of real life case studies which prove ndt techniques global relevance the volume is an invaluable reference resource for students researchers and practitioners alike helps readers to easily identify the latest advances in non-destructive testing by subdividing the content into sections specific to each assessment approach explores the integration of different ndt methodologies facilitating the interoperability of traditional and advanced technologies presents case studies based on real built heritage to show how to correctly implement the measurement techniques described and to interpret the results

Global Navigation Satellite Systems 2021-05-09

global navigation satellite systems gnss and their associated technologies have advanced by leaps and bounds in the nine years since the first edition of this book was published the concept of survey has changed especially in the disciplines of geomatics and geoinformatics this revised and updated second edition provides a thorough understanding of the basic principles and techniques of gnss analyzes all four active systems and explains clearly how each of these systems works because of its straightforward treatment of the subject readers will gain an insight into the techniques trends and applications of gnss and develop knowledge on selecting an appropriate gnss instrument written for students and practitioners in geoinformatics geomatics engineering surveying and remote sensing and gis this introductory and practical book includes questions and exercises in each chapter

originally published in 1995 monitoring active volcanoes is a comprehensive text which addresses the importance of volcano surveillance in the context of forecasting eruptive activity and mitigating its effects the traditional core of seismic and ground deformation monitoring is discussed along with more innovative techniques involving the recording of microgravity and micromagnetic variations and the changing compositions of volcanic gases and liquids the role of satellites is stressed particularly with regard to the capabilities for measuring surface deformation recognizing thermal anomalies and monitoring gas and ash plumes from space platforms this book provides an invaluable insight into how and why volcanoes are monitored it will be of interest to volcanologists geophysicists ~~the rise of creative class~~

collision reconstruction methodologies volume 6b the last ten years have seen explosive growth in the technology available to the collision analyst changing the way reconstruction is practiced in fundamental ways the greatest technological advances for the crash reconstruction community have come in the realms of photogrammetry and digital media analysis the widespread use of scanning technology has facilitated the implementation of powerful new tools to digitize forensic data create 3d models and visualize and analyze crash vehicles and environments the introduction of unmanned aerial systems and standardization of crash data recorders to the crash reconstruction community have enhanced the ability of a crash analyst to visualize and model the components of a crash reconstruction because of the technological changes occurring in the industry many sae papers have been written to address the validation and use of new tools for collision reconstruction collision reconstruction methodologies volumes 1 12 bring together seminal sae technical papers surrounding advancements in the crash reconstruction field topics featured in the series include night vision study and photogrammetry vehicle event data recorders motorcycle heavy vehicle bicycle and pedestrian accident reconstruction the goal is to provide the latest technologies and methodologies being introduced into collision reconstruction appealing to crash analysts consultants and safety engineers alike

computer aided highway engineering is aimed at developing professional knowledge in the field of highway engineering with adequate skills in planning designing and implementation of the highway project with an exposure of hands on training of computer software in designing the worldwide road infrastructures it discusses digital terrain model dtm using satellite data including highway geometric pavement and tunnel design supported by relevant tutorials quantity estimation cost estimation and production of various types of construction drawings are described in detail with theory and tutorials backed by real project data recognizes the role of information and computer technology in various aspects of highway design reviews different tasks for feasibility studies and dpr with software applications explores topographic survey digital terrain model dtm and highway geometrics and pavement and drainage design discusses project estimations for various revisions of the engineering work includes heads pro along with chapter wise tutorials containing design and field data tutorial guides and various tutorial videos this volume is aimed at professionals in civil engineering highway engineering transport planning and town planning and traffic engineering

Crosscurrents 1988

the changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline the number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically as more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult the fourteen volumes of this treatise on geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding earth s surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of earth s diverse surfaces this treatise on geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that educators and students researchers will find useful geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding editor in chief prof j f shroder of the university of nebraska at omaha is past president of the qg g section of the geological society of america and present trustee of the gsa foundation while being well respected in the geomorphology research community and having won numerous awards in the field a host of noted international geomorphologists have contributed state of the art chapters to the work readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the world expert volume editors and by the editor in chief himself no other reference work exists in the area of geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece from the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned
