this book is based on the common core syllabus of up technical university it explains in a simple and systematic manner the basic principles and applications of engineering physics after explaining the special theory of relativity the book presents a detailed analysis of optics scalar and vector fields are explained next followed by electrostatics magnetic properties of materials are then described the basic concepts and applications of x rays are highlighted next quantum theory is then explained followed by a lucid account of lasers after explaining the basic theory the book presents a series of interesting experiments to enable the students to acquire a practical knowledge of the subject a large number of questions and model test papers have also been added different chapters have been revised and more numerical problems as per requirement have been added the book would serve as an excellent text for first year engineering students diploma students would also find it extremely useful

this book presents a variety of policy adoption methods irrigation scheduling and design procedures in micro irrigation engineering for horticultural crops the chapters range from policy interventions to applications of systems for different crops and under different land conditions compiling valuable information and research the book is divided into three main sections policy options drip irrigation among adopters irrigation scheduling of horticultural crops design of drip irrigation systems the editors present valuable research and information on micro irrigation methods in an effort to focus on innovation and evolving new paradigms for efficient utilization of water resources the adoption of micro irrigation systems can be a panacea for irrigation related problems and can help to increase the yield and area under cultivation especially for small farmers without abundant technological resources micro irrigation engineering for horticultural crops policy options scheduling and design will be valuable for agricultural engineering students irrigation engineers and scientists professors in engineering

this book describes the interaction between ions and metallic targets as well as energy loss processes during ion implantation and irradiation ion bombardments of targets cause changes in surface layer chemical composition radiation defect formation sputtering blistering swelling and ion mixing these effects modify surface topography crystalline structure electrical and tribological properties of metals and alloys the book presents research on the effects of the implantation and irradiation on the friction and wear of modified materials as well as practical applications of ion implantation and irradiation it offers a review of current problems related to the modification of materials via irradiation in addition computer programs for modeling the depth of ions and vacancies in a sample are presented and potential causes of disagreement between modeling and experimental results are described finally the book provides evidence of the long range effect effect of ion irradiation on the properties of metals and alloys is aimed at academics investigating the properties of metals and alloys after irradiation and or implantation as well as for students of engineering and physical and chemical sciences the book is also useful for those looking for up to date information on these methods and ways of solving related problems and for designers of equipment used in places exposed to high ion irradiation or to cosmic space

the world s most disaster prone region has witnessed natural disasters that affected development building resilience to natural disasters is crucial disaster risk reduction drr must be integrated into national development planning this report assesses the state of resilience in the region and disaster related goals and targets of the sustainable development goals and the sendai framework for disaster risk reduction it highlights drought and reviews information management that would equip many countries in providing the right information to the right people at the right time paying attention to the need to integrate drr into development planning and government the goal is to build resilience towards achieving sustainable development

this book discusses how nanostructured materials play a key role in helping address environmental challenges employing nanostructured materials in catalysis can increase the efficient decomposition of toxic pollutants in air water and soil this multidisciplinary book discusses the most promising nanostructured materials made up of metals metal oxides metal chalcogenides multi metal oxides carbon nanostructures and hybrid materials that can address environmental remediation it provides a well referenced introduction to newcomers from allied disciplines and will be valuable to researchers in academia industry and government working on solutions to environmental problems

Effect of Ion Irradiation on the Properties of Metals and Alloys

1998

this book deals with different aspects of the structure and properties of disordered materials whenever the normal state of matter is affected by internal or external agencies and new states are developed it is generally observed that the new materials possess disordered structures however some characteristics such as the

electronic and ionic remain similar to those of crystalline solids such isotropic materials are also termed disordered solids this book surveys the physics of materials like non transition transition metals and alloys in their solid and liquid phases liquid amorphous solids and materials with super structures like fullerene lattices etc the advancements in these materials which possess unusual physical properties provide exciting possibilities for technology and industry up to date investigations about theoretical and experimental techniques are presented here the reviews on different materials were prepared by renowned experts in the corresponding areas

biodiversity and climate change adaptation in tropical islands provides comprehensive information on climate change biodiversity possible impacts adaptation measures and policy challenges to help users rehabilitate and preserve the natural resources of tropical islands while biodiversity and climate change of tropical islands has previously received less attention it is ironically one of the most vulnerable regions in this regard the core content of the work derives largely from the ideas and research output from various reputed scientists and experts who have recorded climate change impacts on aquatic and coastal life in tropical regions contributors have direct working experience with the tribes in some of the tropical islands all of their expertise and information is compiled and presented in the work including coverage related to climate change this work highlights the ever growing need to develop and apply strategies that optimize the use of natural resources both on land and in water and judicious use of biodiversity it functions as a critical resource on tropical island biodiversity for researchers academicians practitioners and policy makers in a variety of related disciplines covers a huge range of biodiversity documentation conservation measures and strategies that can be applied to various sectors from forests to agriculture brings together expertise from researchers in the area who have direct experience in the regions described contains a wealth of field research related to biodiversity conservation and its applications from a variety of tropical islands
