set in the long lost city of victoria a fictional world similar to hong kong atlas is written from the unified perspective of future archaeologists struggling to rebuild a thrilling metropolis divided into four sections theory the city streets and signs the novel reimagines victoria through maps and other historical documents and artifacts mixing real world scenarios with purely imaginary people and

events while incorporating anecdotes and actual and fictional social commentary and critique much like the quasi fictional adventures in map reading and remapping explored by paul auster jorge luis borges and italo calvino dung kai cheung s novel challenges the representation of place and history and the limits of technical and scientific media in reconstructing a history it best exemplifies the author s versatility and experimentation along with china s rapidly evolving literary culture by blending fiction nonfiction and poetry in a story about succeeding and failing to recapture the things we lose playing with a variety of styles and subjects dung kai cheung inventively engages with the fate of hong kong since its british handover in 1997 which officially marked the end of colonial rule and the beginning of an uncharted future

this book focuses on places and instances where solomon s legendary biography intersects with those of jesus christ and of aristotle solomon is the axis around which this trio revolves the thread that binds it together it is based on the premise that there exists a correspondence both overt and implied between these three biographies that has taken shape within a vast multifaceted field of texts for more than two thousand years

pataphysics the pseudoscience imagined by alfred jarry has so far because of its academic frivolity and hermetic perversity attracted very little scholarly or critical inquiry and yet it has inspired a century of experimentation tracing the place of pataphysics in the relationship between science and poetry christian bök shows it is fundamental to the nature of the postmodern and considers the work of alfred jarry and its influence on others a long overdue critical look at a significant strain of the twentieth century avant garde pataphysics the poetics of imaginary science raises important historical cultural and theoretical issues germane to the production and reception of poetry the ways we think about write and read it and the sorts of claims it makes upon our understanding

today complex numbers have such widespread practical use from electrical engineering to aeronautics that few people would expect the story behind their derivation to be filled with adventure and enigma in an imaginary tale paul nahin tells the 2000 year old history of one of mathematics most elusive numbers the square root of minus one also known as  $i$  he recreates the baffling mathematical problems that conjured it up and the colorful characters who tried to solve them in 1878 when two brothers stole a mathematical papyrus from the ancient egyptian burial site in the valley of kings they led scholars to the earliest known occurrence of the square root of a negative number the papyrus offered a specific numerical example of how to calculate the volume of a truncated square pyramid which implied the need for  $i$  in the first century the mathematician engineer heron of alexandria encountered  $i$  in a separate project but fudged the arithmetic medieval mathematicians stumbled upon the concept while grappling with the meaning of negative numbers but dismissed their square roots as nonsense by the time of descartes a theoretical use for these elusive square roots now called imaginary numbers was suspected but efforts to solve them led to intense bitter debates the notorious  $i$  finally won acceptance and was put to use in complex analysis and theoretical physics in napoleonic times addressing readers with both a general and scholarly interest in mathematics nahin weaves into this narrative entertaining historical facts and mathematical discussions including the application of complex numbers and functions to important problems such as kepler s laws of planetary motion and ac electrical circuits this book can be read as an engaging history almost a biography of one of the most evasive and pervasive numbers in all of mathematics some images inside the book are unavailable due to digital copyright restrictions

i am not imaginary budo is lucky as imaginary friends go he s been alive for more than five years which is positively ancient in the world of imaginary friends but budo feels his age and thinks constantly of the day when eight year old max delaney will stop believing in him when that happens budo will disappear max is different from other children some people say he has asperger s but most just say he s on the spectrum none of this matters to budo who loves max unconditionally and is charged with protecting him from the class bully from awkward

situations in the cafeteria and even in the bathroom stalls but he can't protect max from mrs patterson a teacher in the learning center who believes that she alone is qualified to care for this young boy when mrs patterson does the unthinkable it is up to budo and a team of imaginary friends to save max and budo must ultimately decide which is more important max's happiness or his own existence matthew dicks memoirs of an imaginary friend is a triumph of courage and imagination that touches on the truths of life love and friendship as it races to a heartwarming and heartbreaking conclusion

what happens when imagination shacks up with reality the answer may shock you be a slacker with the unabashedly picaresque luke soloman in book iii of the critically acclaimed beginner's luke series for a debauched stint in the funhouse an alternate universe in the hero's words that would make lewis carroll woozy from chapter 2 the painted word the funhouse lived up to its name as a place where i stared at my uncannily close but not quite mirror image my doppelganger imaginary self and i scrutinized malcolm intensely without appearing to half fearing half hoping he'd made me up and i could wash my hands of the responsibility for creating myself once and for all

### **Portraits of an Imaginary Young Man 2010-02**

the word theory in the title is to be understood in a very non technical sense indeed apart from the idea of the invariant elements of an elliptic involution on a straight line no theory is found at all the purpose of the book is rather to furnish a certain graphical representation of imaginaries under a number of conventions more or less well known three concepts run through the work first an incompletely defined idea of the nature of an imaginary second the analogy with the geometry of reals third the use of coordinate methods assuming the algebra of imaginaries given a real point  $o$  and a real constant  $k$  an imaginary point  $p$  is defined by the equation  $op^2 = k^2$  the two imaginary points  $p$  and  $p'$  are the double points of an involution having  $o$  for center and  $ik$  for parameter the algebra of imaginaries is now assumed and a geometry of imaginary distances on a straight line is built upon it the reader is repeatedly reminded that in themselves there is no difference between real and imaginary points that differences exist solely in their relations to other points in the extension to two dimensions both  $x$  and  $ix$  are plotted on a horizontal line while  $x$  and  $xy$  are plotted on a vertical line imaginary lines are dotted and points having one or both coordinates imaginary are enclosed by parentheses but otherwise the same figures are used for proofs either by the methods of elementary geometry or by coordinate methods in the algebra of segments it is shown that an imaginary distance  $od$  can be expressed in the form  $iod$  wherein  $od$  is a real segment or at most by  $od$  times some number now follows a long development of the extension of cross ratios etc to imaginaries in fact every word of this is found implicitly in any treatment of the invariance of cross ratios under linear fractional transformation in chapter ii the conic with a real branch is introduced beginning with involutions of conjugate points on lines having imaginary points on the conic if the coefficients in the equation of a circle are real the usual graph of  $x^2 + y^2 = a^2$  for real  $x$  and real  $y$  is followed by replacing  $y$  by  $iy$  then proceeding as before the former locus is called the  $1/1$  branch and the latter the  $1/i$  branch of the circle similarly it has a  $i/1$  branch and another  $i/i$  but the latter has no graph this idea is applied in all detail to ellipses hyperbolas and parabolas in the case of the central conics it is also followed by replacing rectangular coordinates by a pair of conjugate diameters the ordinary theorems of poles and polars and the theorems of pascal brianchon desargues carnot are shown to apply indeed after having established the applicability of cross ratios in the earlier chapters all these proofs can be applied in the same manner as to reals without changing a word an excerpt from bulletin of the american mathematical society vol 27 1921

### **The Theory of the Imaginary in Geometry 2015-07-15**

the story of a boy and his imaginary friend told by the imaginary friend zach should've outgrown his imaginary friend by now he knows this he's 11 long past the days when kids are supposed to go on epic make believe adventures with their invisible friends but after the death of his father five years ago all zach wanted was an escape from the real world so his imaginary friend shovel hasn't faded away like the other kids have their imaginary friendship grew stronger but now zach's in middle school and things are getting awkward his best friend ditched him for a cooler crowd his classmates tease him in the hallways he still misses his dad reality is the worst which is why zach makes regular visits to a fantasy world with shovel but is zach's overactive imagination helping him deal with loss or just pushing people away poignant humorous and breathtaking imaginary is an inventive story of friendship loss and growing up as only an imaginary friend could tell it
