oil an integral part of the contemporary global economy is considered a driving force behind the 2003 invasion of iraq hydrocarbon reserves in iraq have a significant role to play in global supply with oil revenue accounting for more than 90 of iraqi government income this book provides a comprehensive insight into the key foundations of iraq s oil industry and assists in the development of a core area of domestic law to promote economic recovery following years of instability it addresses the development of oil legislation and the formation of contracts since the us and allied occupation of iraq in 2003 legislation is assessed against the framework of the constitution along with the different types of oil agreements and their terms the book looks at three main aspects of oil legislation beginning with the validity and interpretation of the constitution as any subsequent legislation governing oil policy will be based upon this the work then discusses whether the draft oil and gas law of 2007 and any subsequent oil legislation including the law

implemented by the kurdish regional government in 2007 is valid finally the book analyses the legitimacy of oil agreements entered into by the central and regional governments and whether these contain terms beneficial to the state and contracting party providing an in depth analysis of the origins and development of the legal framework of the oil industry in iraq the book acts as both a reference source and a springboard for future research across a range of legal economic and policy perspectives it will appeal to practitioners and academics working in energy law and international investment law as well as policy makers legal advisors and those working in governments and energy companies

a review of the existing literature on the china india comparative theme conveys the distinct impression that the literature largely projects china and india as intrinsically competitive entities while much has been written on where and why china and india are contesting particularly from a political sense very little attention has been devoted to mutual collaboration whether existing or potential such possibilities are at their greatest in economics which will dominate the future china india relationship this book explores sino indian ties from a comparative economic perspective and argues that it is erroneous to visualise the ties either from exclusively competitive or collaborative perspectives the future relationship between the two countries will be characterised simultaneously by two c s competition and collaboration which are both linked to common challenges facing them arguing that while competition in the economic sphere is inevitable given their size and aspirations the book contends that negative externalities from competition will encourage both countries to collaborate and expand the scope of such collaboration the book s refreshing angle makes it a must read for those interested in sino indian relationship

the corporation is a major vehicle of business activity worldwide it incurs social costs and generates benefits that continually change hence whether it still provides a net benefit to society is contestable evidence based observations of the last decade of corporate sagas and the role of accounting and auditing suggests a serious rethink is needed about how commerce is pursued and in particular whether the current corporate form has passed its use by date the authors of this new book including internationally renowned accounting scholars argue that the two major governance tools of accounting and auditing require major makeovers beginning by analyzing the global sweep of deregulation that corporations experienced since 2000 the authors go on to discuss the various

scandals and crises that characterized the subsequent period culminating in yet more calls for further deregulation having thoroughly assessed the status quo they provide a series of urgent recommendations for reforms designed to bring the corporation back to the real world and restore its purpose this book will be of great interest to students and academics across accounting business law and finance especially more advanced students at undergraduate and postgraduate level

examines the ethical dilemma of whether and how archaeologists and other

experts should work with the military to protect cultural property in times of conflict the world reacted with horror to the images of the looting of the national museum in iraq in 2003 closely followed by other museums and then largely unchecked or archaeological sites across the country this outcome had been predicted by many archaeologists with some offering to work directly with the military to identify museums and sites to be avoided and protected however this work has since been heavily criticised by others working in the field who claim that such collaboration lended a legitimacy to the invasion it has therefore served to focus on the broader issue of whether archaeologists and other cultural heritage experts should ever work with the military and if so under what guidelines and strictures the essays in this book drawn from a series of international conferences and seminars on the debate provide an historical background to the ethical issues facing cultural heritage experts and place them in a wider context how do medical and religious experts justify their close working relationships with the military is all contact with those engaged in conflict wrong does working with the military really constitute tacit agreement with military and political goals or can it be seen as contributing to the winning of a peace rather than success in war are guidelines required to help define roles and responsibilities and can conflict situations be seen as simply an extension of protecting cultural property on military training bases the book opens and addresses these and other questions as matters of crucial debate contributors peter stone margaret m miles fritz allhoff andrew chandler oliver urquhart irvine barney white spinner rené teijgeler katharyn hanson martin brown laurie rush francis scardera caleb adebayo folorunso derek suchard joanne farchakh bajjaly john curtis jon price mike rowlands iain shearer

a rare analytical look at the financial crisis using simple analysis the economic crisis that began in 2008 revealed the numerous problems in our financial system from the way mortgage loans were produced to the way wall street banks leveraged themselves curiously enough however most of the reasons for the banking collapse are very similar to the reasons that long term capital management ltc m the largest hedge fund to date collapsed in 1998 the crisis of crowding looks at ltc m in greater detail with new information for a more accurate perspective examining how the subsequent hedge funds started by meriwether and former partners were destroyed again by the lapse of judgement in allowing lehman brothers to fail covering the lessons that were ignored during ltc m s collapse but eventually connected to the financial crisis of 2008 the book presents a series of lessons for hedge funds and financial markets including touching upon

the circle of greed from homeowners to real estate agents to politicians to wall street guides the reader through the real story of long term capital management with accurate descriptions previously unpublished data and interviews describes the lessons that hedge funds as well as the market should have learned from Itcm s collapse explores how the financial crisis and Itcm are a global phenomena rooted in failures to account for risk in crowded spaces with leverage explains why quantitative finance is essential for every financial institution from risk management to valuation modeling to algorithmic trading is filled with simple quantitative analysis about the financial crisis from the quant crisis of 2007 to the failure of lehman brothers to the flash crash of 2010 a unique blend of storytelling and sound quantitative analysis the crisis of crowding is one of the first books to offer an analytical look at the financial crisis rather than just an account of what happened also included are a layman s guide to the dodd frank rules and what it means for the future as well as an evaluation of the fed s reaction to the crisis

biotechnology is at the heart of heated debates about ethics safety economic development and about the control over the biological materials and technologies used the latter grossly called biodiversity issues relating to the application of intellectual property has been the subject of a wealth of literature yet the situation of animal genetic resources specifically has only marginally been addressed so far many books and articles address biotechnology and agriculture but have only plants and seeds in mind case law and specific regulation is equally scarce exacerbated by the so called erosion of animal genetic resources climate change the globalization of the market place and a strong concentration of markets animal genetic resources however demand specific analysis and adjustments in

intellectual property law the decoupling of rights over animal genetic resources as an abstract concept from those over the concrete animals is a fact today the application of patents in this context became a full fledged part of the management of animal genetic resources this monograph analyzes against this background the impact of the patent system on ownership traditions in agriculture on animal welfare and on biodiversity it looks at how those factors in turn are likely to affect the shape of patent law and how they should affect it the author hereby focuses on important specific issues arising including the following the underlying elements deciding on the shape of regulation innovation economic development agriculture human rights animal welfare the conservation of resources and equal trading conditions the continuing applicability of trademarks geographical indications copyright and trade secrets patentability rules and exclusions the extension of patent rights over progeny the meaning of essentially biotechnological processes the legal definitions of morality and ordre public in the context of animal welfare and the future of international patent law in the context of global governance theories with detailed investigation of how three major jurisdictions the european union the united states and canada have regulated the matter the book highlights unresolved issues in the laws dealing with animal genetic resources how do the usual principles of patent law affect ownership over animals in agriculture to what extent is patent law in accordance with neighbouring fields of regulation with relation to animal welfare how can intellectual property be used to alter stimulate or tackle developments in the realm of the conservation and promotion of biodiversity questions like these are asked checked upon the more technical country studies and then used to put to test the adequacy of international patent regulation in a final chapter as a deeply informed overview of the arguments and discussion points this is the only book of its kind it links

general discussions to the often technical and complicated patent regulations in the specific context of animal genetic resources it is sure to bring lawyers in the field closer to the policy debates and decision makers closer to the precise idiosyncrasies of patent law

this book critically investigates the discourses and practices of human security and

aims to delve below the stereotypical imageries representing them drawing on foucault and deleuze the author approaches human security from a new perspective with the aim of ascertaining what has been behind and underneath a certain spatio temporal articulation of human security and with what political implications and consequences each human security assemblage is composed of messy discourses and practices which are loosely related and sometimes even disconnected this book examines the canadian and japanese articulations of human security and establishes the kinds of structural terrains have enabled shaped or blocked the unfolding of these versions of human security the pivotal contention of the book is that canadian and japanese articulations of human security have been different because they have grown from completely different domestic economies of power governing the relationship between the state apparatus and the non profit and voluntary sector while the canadian human security assemblage has been shaped by transformations in the country s advanced liberal model of government the japanese has been shaped by the continuities of japan s bureaucratic authoritarianism a novel approach is employed for the related process tracing a general series linking structural conditions with actual articulations of the human security projects and their further development including analysis of their unintended consequences this book will be of much interest to students of critical security studies human security global governance foreign policy and ir security studies
