201384 alex graves this paper shows how long short term memory recurrent neural networks can be used to generate complex sequences with long range structure simply by predicting one data point at a time the approach is demonstrated for text where the data are discrete and online handwriting where the data are real valued
20131016 in this paper we present several extensions that improve both the quality of the vectors and the training speed by subsampling of the frequent words we obtain significant speedup and also learn more regular word representations we also describe a simple alternative to the hierarchical softmax called negative sampling

1312 5602 playing atari with deep reinforcement learning

Mar 24 2024

submitted on 19 dec 2013 playing atari with deep reinforcement learning volodymyr mnih koray kavukcuoglu david silver alex graves ioannis antonoglou daan wierstra martin riedmiller we present the first deep learning model to successfully learn control policies directly from high dimensional sensory input using reinforcement

1312 6114 auto encoding variational bayes arxiv org

Feb 23 2024

20131220 we introduce a stochastic variational inference and learning algorithm that scales to large datasets and under some mild differentiability conditions even works in the intractable case our contributions are two fold first we show that a reparameterization of the variational lower bound yields a lower bound estimator that

a reconstruction of regional and global temperature for the

Jan 22 2024

201338 the standard 5x5 reconstruction exhibits 0.6 c of warming from the early holocene 11 300 yr b p to a temperature plateau extending from 9500 to 5500 yr b p this warm interval is followed by a long term 0.7

c cooling from 5500 to 100 yr b p fig 1b extratropical northern hemisphere sites 30 to 90 n in particular from the

translating embeddings for modeling multi relational data

Dec 21 2023

abstract we consider the problem of embedding entities and relationships of multi relational data in low dimensional vector spaces our objective is to propose a canonical model which is easy to train contains a reduced number of parameters and can scale up to very large databases
