students of jawaharlal nehru technological university kakinada it covers functions of a complex variable and complex integration probability and distributions sampling distributions and test of hypothesis and significance with previous gate questions at the end of every chapter for the benefit of the students the aim of writing this book has been to present the material in a concise and very simple way to easily grasp the fundamentals every chapter starts with a simple introduction and then related topics are covered with a detailed description along with the help of figures the manuscript contains five chapters each of which have been prepared as per the syllabus taught in various colleges and institutions the fundamental concepts are emphasized in each chapter and the details are developed in an easy to follow style each chapter is divided into small parts and sub headings are provided to make the reading a pleasant journey from one interesting topic to another the manuscript has been organized such that it provides a link between different topics of the chapter to make it simpler all the necessary mathematical steps have been given and the physical feature of the mathematical equation is discussed as and when required cereal also called grain any grass yielding starchy seeds suitable for food the cereals most commonly cultivated are wheat rice rye oats barley corn maize and sorghum as human food cereals are usually marketed in their raw grain form some are frozen or canned or as ingredients of various food products as animal feed they are consumed mainly by livestock and poultry which are eventually rendered as meat dairy and poultry products for human consumption and they are used industrially in the production of a wide range of substances such as glucose adhesives oils and alcohols real processing treatment of cereals and other plants is to prepare their starch for human food animal feed or industrial use cereals are used for both human and animal food and as an industrial raw material although milled white flour is largely used for bread production especially in industrialized countries the grain may be converted to food in other ways the relatively minor use of cereals in nonfood products includes the cellulose in the straw of cereals by the paper industry flour for manufacturing sticking pastes and industrial alcohol and wheat gluten for core binders in the casting of metal rice chaff is often used as fuel in asia assuming a 50 percent increase in fertilizer use and that 41 5 percent of the cropped area is irrigated projected 2020 food production would increase by 7 2 percent from 251 0 million tons to 269 1 million tons future increases in the production of cereals and non cereal agricultural commodities will have to be essentially achieved through increases in productivity as the possibilities of expansion of area and livestock population are minimal to meet the projected demand in the year 2020 country must attain a per hectare yield of 2 7 tons 2 for rice 3 1 tons for wheat 2 1 tons for maize 1 3 tons for coarse cereals 2 4 tons for cereal 1 3 tons for pulses 2 3 tons for potato 2 5 7 for vegetables and 2 4 1 tons for fruits the content of the book includes information about cereal food technology the major contents of this book are project profiles of projects like rice
