employing staff and developing ways of encouraging customer loyalty house calls may be the oldest form of health care delivery but they are making a comeback why because it may be the simplest fastest way to a highly profitable practice and great lifestyle this book is the definitive step by step how to manual for any doctor physician or podiatrist who wants to shift from a standard office based practice to a more profitable house calls based practice here is the story about the book and how the author thrives in this medical practice model after completing comprehensive foot and ankle surgery residency training and winning multiple awards from the american college of foot ankle surgeons and the american podiatric medical association dr christopher segler opened a standard office based podiatry practice immediately out of residency through hard work and creative marketing efforts his practice grew rapidly and he soon had a full schedule too full in fact he found himself leaving for the hospital in the dark sitting in the office charting on the weekends and wishing he had more time to actually talk to patients searching his soul and trying to determine what he wanted to do with the next phase of his career and his life he made a list with two columns everything i love about the practice of medicine and everything i hate about the practice of medicine after completing the list he realized that a standard office based practice had too many related items in the hate column and too few in the love column he then set about creating a practice that would include only items from the everything i love column and vowed never again to do anything from the everything i hate column the result was a simple fee for service cash based practice free from insurance hassles he opted out of medicare stopped accepting insurance and jettisoned his office and all associated overhead the result of that bold move was a period of fear followed by experimentation that eventually yielded a high profit low stress practice he now walks his son to school travels extensively and earns more money than he did from his previous standard practice while working a fraction of the hours he used to put in this book shows

exactly how he built his practice and how you can too the reasoning behind opting out of medicare is explained he outlines the methods he uses to attract patients who are willing and eager to pay on the spot for home based care he tells you best practices he learned through trial and error while he built his new model what works and what doesn't if want to get your life back with a high profit low stress practice this book will save years of fear help you skip the experimentation phase and ensure that you land high on the learning curve so you can start earning a real living and live a great life right now globally podiatric medicine has evolved significantly in both its depth and scope of practice continual innovation and a dynamic response to the call for evidence based practice have led to a rapid revolution in podiatric education research and practice podiatry plays a pivotal role in the early assessment diagnosis and management of lower limb pathologies as well as in the detection and monitoring of long term conditions the time dedicated to podiatric consultation provides an opportunity for dialogue and interaction which places the profession at the heart of public health education having a unique role in patient care podiatrists gain a particular insight into the holistic lives of their patients and are therefore highly valued members of the extended multidisciplinary team in both primary and secondary care podiatric medicine is based on the cognitive and applied understanding of anatomy physiology biomedical psychosocial and physical sciences consequently podiatrists are now able to offer care encompassing a diverse range of diagnostic skills and management strategies since comorbidities polypharmacy and ambulatory wellbeing issues present across all ages podiatrists need to maintain the health of increasing numbers of patients who present with complex medical conditions all these professional developments have led to a need for specialist textbooks reflecting the enhanced role of podiatrists in the wider context of health and wellbeing this landmark publication offers a single source of reference for the structural and functional capacity of all major body systems it also provides an insight into the social complexities of working with patients their families and carers in everyday clinical practice in adopting this holistic approach to patient care this text is the first in the discipline to integrate sociological perspectives public health education and the complexities of mental illness with traditional chapters on human anatomy and physiology edited and authored by an international team of experts on podiatric medicine science and health and utilising the latest research this comprehensive textbook is destined to become a seminal text for the next generation of podiatrists both as students and as healthcare professionals packed with practical tips and advice for the podiatrist this unique book gives students practitioners and other healthcare professionals working with the diabetic foot fresh insights into the role of the podiatrist in diabetic foot care and the many ways in which outcomes for diabetic foot patients can be improved using a very practical approach with case histories and clinical tips it describes how podiatrists can accurately assess and efficiently manage the diabetic foot and looks at how podiatric care should be adapted according to the type and stage of foot being dealt with detailed management programmes geared to all types of patient from low risk to high risk clear guidance on when to seek the advice of other members of the multidisciplinary team and special consideration of the podiatric management of particularly challenging sub groups of diabetic patients are just some of the areas covered in this handy volume the rationales behind all podiatric treatments for diabetic feet are clearly discussed along with detailed descriptions of techniques and procedures many of which have not previously been written about in podiatry books with full colour throughout and many invaluable photographs from the author's own collection podiatric assessment and management of the diabetic foot is written specially for podiatrists by a podiatrist but will be also be an essential purchase for all healthcare professionals involved in the field of diabetic foot care unique in being written specifically with podiatrists in mind liberally illustrated with full colour photographs practically orientated for the student and busy practitioner author has over 20 years experience of clinical practice and teaching the text is relevant and current irrespective of the student's level of training the book is also relevant to the front office staff who may use it as a guide to the terminology of podiatric anatomy and surgery which is covered in an extensive glossary together with the more common abbreviations used in patient chart work richard l blake d p m is a practicing podiatrist in san francisco california at the famed center for sports medicine st francis memorial hospital this book is a good mixture of the art and science of that

medical practice the emphasis of the book is on the conservative treatments of injuries of the foot ankle and lower leg dr blake emphasizes conservative and when appropriate simple approaches to these injuries he tries hard to establish a healing environment for the patient at the first visit and then works the patients through all the phases of rehabilitation this book begins by covering some general topics like what rules not to break then discusses general rehabilitation principles general treatments of pain bio mechanical approaches to injury and gait evaluation he then describes some of the general rules of treatment concerning tendinitis nerve injuries and fractures in the second part of the book dr richard blake uses many of these general principles and begins to describe top treatments for injuries in the front of the foot mid part of the foot heel area ankle achilles tendon area and lower leg not involving the knee or above some of the more common injuries described are hallux limitus rigidus bunions sesamoid injuries metatarsalgia mortons neuroma metatarsal fractures hammertoes calluses blisters capsulitis or plantar plate tears gout toenail fungus lisfranc sprain accessory navicular ganglion cysts plantar fasciitis plantar fascial tears calcaneal stress fractures ankle sprains and instabilities posterior or anterior tibial tendinitis posterior tibial tendon dysfunction achilles tendinitis achilles ruptures calf strain shin splint stennis leg compartment syndrome tibial or fibular stress fractures cramps or deep vein thrombosis with 95 of all of the lower extremity pain syndromes and injuries not requiring any form of surgery a book specializing in a conservative and thoughtful approach to most ailments is very needed dr rich blake tries to get the patient very involved with their own healing is obvious throughout the book the emphasis of a conservative approach must require the patients involvement this book will help the patient know the subtleties of various treatments like stretching strengthening starting to run looking for a stable shoe power lacing for stability which injection to get for a neuroma why not to use nsaid if bone injury is suspected when support hose are not doing the right job etc through the 35 years that dr richard blake has practiced sports medicine teaching his patients why certain treatments are used and what they need to do is always stressed his teaching started with patients but has involved both the national and international worlds of podiatry he has given over 200 lectures around the world written 40 plus articles has a blog and youtube channel but his patients needs and injuries have always come first he considers his simple approach to most injuries probably boring to some podiatrists but the patients have truly benefited the approach that is emphasized in the book is to immediately create a healing environment gradually get stronger and gradually return to your previous activities the book also emphasizes finding the cause or causes of the injury or it may eventually come back the subtleties of the individual injury can be in the patients presentation how they respond to various treatments and making changes appropriately when the treatment at times stalls this practical text reviews the most recent literature supporting clinical decisions regarding over a dozen common foot and ankle conditions along with presentations of the techniques themselves both surgical and non surgical the conditions are presented anatomically from forefoot to ankle beginning with issues surrounding toenails such as fungal infection and treatment of ingrown toenails then proceeds to discuss the toes and toe joints including hammertoe fixation 2nd mpj pathology and ligidus bunionectomy treatments for arthritis of the midfoot and flatfoot follow along with arthroscopy and arthroplasty of the ankle surgical and non surgical approaches for achilles tendon ruptures and treatments for charcot neuroarthropathy clubfoot and general considerations of wound care of the foot and ankle throughout an emphasis is placed on the best available evidence for each treatment strategy evidence based podiatry will be a valuable resource for podiatrists orthopedic surgeons and residents fellows and trainees treating these common foot and ankle conditions the surgical guide
