Teaching Naked 2012-07-03

you ve heard about flipping your classroom now find out how to do it introducing a new way to think about higher education learning and technology that prioritizes the benefits of the human dimension josé bowen recognizes that technology is profoundly changing education and that if students are going to continue to pay enormous sums for campus classes colleges will need to provide more than what can be found online and maximize naked face to face contact with faculty here he illustrates how technology is most powerfully used outside the classroom and when used effectively how it can ensure that students arrive to class more prepared for meaningful interaction with faculty bowen offers practical advice for faculty and administrators on how to engage students with new technology while restructuring classes into more active learning environments

The Fur Record 1950

for many of us the idea of healthy eating equals bland food calorie counting and general joylessness or we see the task of great cooking for ourselves as a complicated and expensive luxury beyond our means or ability now peter kaminsky who has written cookbooks with four star chefs for example daniel boulud

and no star chefs such as football legend John Madden shows us that anyone can learn to eat food that is absolutely delicious and doesn't give you a permanently creeping waistline just a couple years ago. Kaminsky found himself facing a tough choice: lose weight or suffer the consequences for twenty years he had been living the life of a hedonistic food and outdoors writer an endless and luxurious feast predictably obesity and the very real prospect of diabetes followed. Things had to change but how could he manage to get healthy without giving up the things that made life so pleasurable? In *Culinary Intelligence*, Kaminsky tells how he lost thirty-five pounds and kept them off by thinking more, not less, about food and he shows us how to eat in a healthy way without sacrificing the fun and pleasure in food. *Culinary Intelligence* shows us how we can do this in everyday life: thinking before eating, choosing good ingredients, understanding how flavor works, and making the effort to cook. Kaminsky tells us what we need to give up: most fast food and all junk food, and what we can enjoy in moderation: dessert and booze. But he also shows us how to tantalize our tastebuds by maximizing flavor per calorie and he makes delectably clear that if we eat delicious, flavorful foods we'll find ourselves satisfied with smaller portions while still enjoying one of life's great pleasures.

premodern buddhists are sometimes characterized as veritable "mind scientists" whose insights anticipate modern research on the brain and mind. Aiming to complicate this story, Dan Arnold confronts a significant obstacle to popular attempts at harmonizing classical buddhist and modern scientific thought: since most Indian buddhists held that the mental continuum is uninterrupted by death, its continuity is what buddhists mean by "rebirth." They would have no truck with the idea that everything about the mental can be explained in terms of brain events. Nevertheless, a predominant stream of Indian buddhist thought associated with the seventh-century thinker Dharmakīrti turns out to be vulnerable to arguments modern philosophers have leveled against physicalism by characterizing the philosophical problems commonly faced by Dharmakīrti and contemporary philosophers such as Jerry Fodor and Daniel Dennett. Arnold seeks to advance an understanding of both first-millennium Indian arguments and contemporary debates on the philosophy of mind. The issues center on what modern philosophers have called intentionality—the fact that the mind can be about or represent or mean other things. Tracing an account of intentionality through Kant, Wilfrid Sellars, and John McDowell, Arnold argues that intentionality cannot in principle be explained in causal terms. Elaborating some of Dharmakīrti's central commitments, chiefly his apoha theory of meaning and his account of self-awareness, Arnold shows that despite his concern to refute physicalism, Dharmakīrti's

causal explanations of the mental mean that modern arguments from intentionality cut as much against his project as they do against physicalist philosophies of mind this is evident in the arguments of some of dharmakirti's contemporaneous indian critics proponents of the orthodox brahmanical mimasa school as well as fellow buddhists from the madhyamaka school of thought whose critiques exemplify the same logic as modern arguments from intentionality elaborating these various strands of thought arnold shows that seemingly arcane arguments among first millennium indian thinkers can illuminate matters still very much at the heart of contemporary philosophy
