bf109 but books setting out to tell the story of both aircraft are very much rarer probably fewer than the fingers of one hand yet their joint story is one which bears retelling since both were essential to the air campaigns of world war two incredibly the men who designed them lacked any experience of designing a modern fighter r j mitchell had begun his career working on industrial steam locomotives willy messerschmitt had cut his aeronautical teeth on light and fragile gliders and sporting planes yet both men not only managed to devise aircraft which could hold their own in a world where other designs went from state of the art to obsolete in a staggeringly short time but their fighters remained competitive over six years of front line combat despite the different ways their creators approached their daunting tasks and the obstacles each faced in acceptance by the services for which they were designed they proved to be so closely matched that neither side gained a decisive advantage in a titanic struggle had either of them not matched up to its opponent so well then the air war would have been a one sided catastrophe ending in a quick defeat for the allies or the axis powers and the course of twentieth century history would have been changed beyond recognition vols for 1919 include an annual statistical issue title varies the congressional record is the energy and water is increasing as a result of rapid economic population and industrial growth by 2050 it is expected that global energy consumption will nearly double in tandem with world water demand because of competing demands for finite resources existing water and energy systems are limited in their ability to satisfy these expanding needs furthermore rapid population and industrial development inevitably result in the generation of a significant amount of wastewater laden with toxins persistent inorganic and organic pollutants and other toxic emissions emitted from different sources opportunities and challenges in climate friendly clean water and energy technologies presents the most recent technological advancements that are relevant to environmentally friendly methods of producing clean water and a sustainable supply of energy in order to protect against climate change it also highlights the most recent empirical research findings in the field of cutting edge industrial and transportation emission reduction measures covering key topics such as renewable energy wastewater treatment and biomaterials this reference work is ideal for environmental scientists
