**Forest and Stream 1874** the time seems ripe for a critical compendium of that segment of the biological universe we call viruses virology as a science having passed only recently through its descriptive phase of naming and numbering has probably reached that stage at which relatively few new truly new viruses will be discovered triggered by the intellectual probes and techniques of molecular biology genetics biochemical cytology and high resolution microscopy and spectroscopy the field has experienced a genuine information explosion few serious attempts have been made to chronicle these events this comprehensive series which will comprise some 6000 pages in a total of about 22 volumes represents a commitment by a large group of active investigators to analyze digest and expostulate on the great mass of data relating to viruses much of which is now amorphous and disjointed and scattered throughout a wide literature in this way we hope to place the entire field in perspective and to develop an invaluable reference and sourcebook for researchers and students at all levels this series is designed as a continuum that can be entered anywhere but which also provides a logical progression of developing facts and integrated concepts
