want your web site to display more quickly this book presents 14 specific rules that will cut 25 to 50 off response time when users request a page author steve souders in his job as chief performance yahoo collected these best practices while optimizing some of the most visited pages on the even sites that had already been highly optimized such as yahoo search and the yahoo front page were able to benefit from these surprisingly simple performance guidelines the rules in high performance sites explain how you can optimize the performance of the ajax css javascript flash and images that you ve already built into your site adjustments that are critical for any rich web application other sources of information pay a lot of attention to tuning web servers databases and hardware but the bulk of display time is taken up on the browser side and by the communication between server and browser high performance sites covers every aspect of that process each performance rule is supported by specific examples and code snippets are available on the book s companion web site the rules include how to make fewer http requests use a content delivery network add an expires header gzip components put stylesheets at the top put scripts at the bottom avoid css expressions make javascript and css external reduce dns lookups minify javascript avoid redirects remove duplicates scripts configure etags make ajax cacheable if you re building pages for high traffic destinations and want to optimize the experience of users visiting your site this book is indispensable if everyone would implement just 20 of steve s guidelines the would be adramatically better place between this book and steve s yslow extension there s reallyno excuse for having a sluggish web site anymore joe hewitt developer of firebug debugger and mozilla s dom inspector steve souders has done a fantastic job of distilling a massive semi arcane art down to a set of concise actionable pragmatic engineering steps that will change the world of web performance eric lawrence developer of the fiddler debugger microsoft corporation

# Jump Start Web Performance

2017-10-13

despite working on the web every day few developers have a good word to say about the monster they ve created achingly slow sites with annoying overlays cookie agreements instant notifications and obtrusive ads litter the web landscape while there may be some excuses for complex web applications there s little justification for sluggish content based and ecommerce sites people are notoriously impatient and an unresponsive site receives fewer visitors and conversions this practical short book provides advice tips and best practice for improving website performance ranging from quick five minute configuration changes to major website overhauls we primarily concentrate on front end

activities and server configurations to optimize the code delivered to a browser some back end tips are provided but this is often specific to your application framework database and usage patterns server side performance can often be improved with additional or more powerful computing resources ideally everyone involved in a project would consider performance from the start somewhat understandably that rarely occurs because no one can appreciate the speed of a website or application before it s been created many of the tips contained in this book can therefore be applied after your project has been delivered
