this note is a user s manual for the dignad toolkit an application aimed at facilitating the use of the dignad model debt investment growth and natural disasters by economists with no to little knowledge of matlab and dynare via a user friendly excel based interface dignad is a dynamic general equilibrium model of a small open economy developed at the international monetary fund the model can help economists and policymakers with quantitative assessments and policy scenario analysis of the macrofiscal effects of natural disasters and adaptation infrastructure investments in low income developing countries and emerging markets dignad is tailored to disaster prone countries which typically are small countries or low income countries that are particularly exposed to large climate shocks countries where shocks that can disrupt the entire economy are frequent however dignad can be relevant also for larger countries that may potentially be exposed to extreme climatic disasters in the future a reference resource for entrepreneurs anyone starting or operating a business this guide provides users of the national household education survey nhes data with suggested techniques for working with the data files special attention is paid to topics that will help users avoid the most commonly made mistakes in working with nhes data the guide is meant to be an introduction and an overview and not a substitute for the separate user s manuals and other reports the nhes is a data collection system of the national center for education statistics that provides descriptive data on the educational activities of the u s population and offers policymakers researchers and educators a variety of statistics on the condition of education in the united states the primary purpose of the nhes is to collect repeated measurements of the same phenomena at different points in time but one time surveys of topics of interest may be fielded the nhes is a telephone survey of the noninstitutionalized civilian population of the united states and households are selected using random digit dialing methods the nhes has been conducted in 1991 1993 1995 and 1996 this guide contains the following sections 1 introduction and overview 2 brief descriptions of the separate nhes data files 3 comparisons with other data sets 4 familiarization with the data and descriptions of data collection and processing 5 selecting variables for working data sets 6 nhes design 7 working with missing data and 8 weights and estimation procedures appendixes contain commonly asked questions and answers examples that illustrate points in the text and a summary of weighting and sample variance estimation variables contains 10 references sld lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the nasa scientific and technical information database the previous conference in this series amta
