31 Years NEET Chapter-wise & Topic-wise Solved Papers PHYSICS (2018 - 1988) 13th Edition

2021-11-30 this book summarizes the basic physics of graphite and newly discovered phenomena in this material the book contains the knowledge needed to understand novel properties of functionalized graphite demonstrating the occurrence of remarkable phenomena in disordered graphite and graphite based heterostructures it also discusses applications of thin graphitic samples in future electronics graphite consists of a stack of nearly decoupled two dimensional graphene planes because of the low dimensionality and the presence of dirac fermions much of graphite physics resembles that of graphene on the other hand the multi layered nature of the graphite structure together with structural and or chemical disorder are responsible for phenomena that are not observed yet in graphene such as ferromagnetic order and superconductivity each chapter was written by one or more experts in the field whose contributions were relevant in the re discovery of un known phenomena in graphite the book is intended as reference for beginners and experts in the field introducing them to many aspects of the new physics of graphite with a fresh overview of recently found

phenomena and the theoretical frames to understand them

New Results and Actual Problems in Particle & Astroparticle Physics and Cosmology 2019-07-07 particle physics also high energy physics is the branch of physics that studies the nature of the particles that constitute matter and radiation although the word e particle e can refer to various types of very small objects e particle physics e usually investigates the irreducibly smallest detectable particles and the fundamental interactions necessary to explain their behaviour by our current understanding these elementary particles are excitations of the quantum fields that also govern their interactions the currently dominant theory explaining these fundamental particles and fields along with their dynamics is called the standard model thus modern particle physics generally investigates the standard model and its various possible extensions e g to the newest e known e particle the higgs boson or even to the oldest known force field gravity written in a clear pedagogic style by active researchers this book will prepare a beginner to work in the field and at the same time will also provide useful reference material for active researchers

this book is devoted to current advances in the field of nonlinear mathematical physics and modeling of critical phenomena that can lead to catastrophic events pursuing a multidisciplinary approach it gathers the work of scientists who are developing mathematical and computational methods for the study and analysis of nonlinear phenomena and who are working actively to apply these tools and create conditions to mitigate and reduce the negative consequences of natural and socio economic disaster risk this book summarizes the contributions of the international school and workshop on nonlinear mathematical physics and natural hazards organized within the framework of the south east europe network in mathematical and theoretical physics seenet mtp and supported by unesco it was held at the bulgarian academy of sciences from november 28 to december 2 2013 the contributions are divided into two major parts in keeping with the scientific program of the meeting among the topics covered in part i nonlinear mathematical physics towards critical phenomena are predictions and correlations in self organized criticality space time structure of extreme current and activity events in exclusion

processes quantum spin chains and integrability of many body systems applications of discriminantly separable polynomials mkdv type equations and chaotic behavior in yang mills theories part ii seismic hazard and risk is devoted to probabilistic seismic hazard assessment seismic risk mapping seismic monitoring networking and data processing in europe mainly in south east europe the book aims to promote collaboration at the regional and european level to better understand and model phenomena that can cause natural and socio economic disasters and to contribute to the joint efforts to mitigate the negative consequence of natural disasters this collection of papers reflects contemporary efforts on capacity building through developing skills exchanging knowledge and practicing mathematical methods for modeling nonlinear phenomena disaster risk preparedness and natural hazards mitigation the target audience includes students and researchers in mathematical and theoretical physics earth physics applied physics geophysics seismology and earthquake danger and risk mitigation
