become the focus of a renewed interest from archaeologists ancient historians and anthropologists in recent years on the one hand neo evolutionary schemas of political transformation find it difficult to define some of their most basic concepts such as chiefdom complex chiefdom and state not to mention the transition between them on the other hand teleological interpretations based on linear dynamics from less to increasingly more complex political structures in successive steps impose biased and too rigid views on the available evidence in fact recent research stresses the existence of other forms of socio political organization less vertically integrated and more heterarchical that proved highly successful and resilient in the long term in tying together social groups what is more such forms quite often represented the basic blocks on which states were built

and that managed to survive once states collapsed finally nomadic maritime and mountain populations provide fascinating examples of societies that experienced alternative forms of political organization sometimes on a seasonal basis in other cases their consideration as marginal populations that cultivated specialized skills ensured them a certain degree of autonomy when living either within or at the borders of states this book explores such small scale socio political organizations their potential and the historical trajectories they stimulated a selection of historical case studies from different regions of the world may help rethink current concepts and views about the emergence and organization of political complexity and the mechanisms that prevented occasionally the emergence of solid polities they may also cast some light over trajectories of historical transformation still poorly understood as are the limits of effective state power this book explores the importance of comparative research and long term historical perspectives to avoid simplistic interpretations based on the characteristics of modern western states abusively used retrospectively
