there is a growing evidence base that documents the social environmental and economic benefits that urban trees can deliver trees are however under threat today as never before due to competition for space imposed by development other hard infrastructures increased pressure on the availability of financial provision from local authorities and a highly cautious approach to risk management in a modern litigious society it is therefore incumbent upon all of us in construction and urban design disciplines to pursue a set of goals that not only preserve existing trees where we can but also ensure that new plantings are appropriately specified and detailed to enable their successful establishment and growth to productive maturity aimed at developers urban planners urban designers landscape architects and arboriculturists this book takes a candid look at the benefits that trees provide alongside the threats that are eliminating them from our towns and cities it takes a simple applied approach that explores a combination of science and practical experience to help ensure a pragmatic and reasoned approach to decision making in terms of tree selection specification placement and establishment in this way trees can successfully be incorporated within our urban landscapes so that we can continue to reap the benefits they provide

the new edition of the well known care and repair of advanced composites 3rd edition improves on the usefulness of this practical guide geared towards the aerospace industry keith b armstrong the original lead author of the first edition was still in charge of this project counting on the expert support of eric chesmar senior composites specialist at united airlines mr chesmar is also an active member of sae international s carre commercial aircraft composite repair committee an elite group of industry experts dedicated to the

standardization safety security and efficiency of composite repairs in the airline industry mr francois museux airbus and mr william f cole ii also contributed care and repair of advanced composites 3rd edition presents a fully updated approach to the training syllabus recommended for repair design engineers and composite repair mechanics metal bonding has been included partly because the definition of composite can be interpreted to include metal skinned honeycomb panels and partly because some composite parts have metal fittings or reinforcements that must be treated before bonding this third edition also covers a number of the problems experienced in service some of which may be applicable to metallic sandwich panels offers suggestions for design improvements including repair design as a particular topic and regulatory changes care and repair of advanced composites 3rd edition provides solid technical information and training for a wide range of airline staff

computational optimization of internal combustion engines presents the state of the art of computational models and optimization methods for internal combustion engine development using multi dimensional computational fluid dynamics cfd tools and genetic algorithms strategies to reduce computational cost and mesh dependency are discussed as well as regression analysis methods several case studies are presented in a section devoted to applications including assessments of spark ignition engines dual fuel engines heavy duty and light duty diesel engines through regression analysis optimization results are used to explain complex interactions between engine design parameters such as nozzle design injection timing swirl exhaust gas recirculation bore size and piston bowl shape computational optimization of internal combustion engines demonstrates that the current multi dimensional cfd tools are mature enough for practical development of internal combustion engines it is written for researchers and designers in mechanical engineering and the automotive industry

this volume explores the myriad of techniques and methodological approaches that are being used in breast cancer research the authors critically evaluate of the advantages and disadvantages of current methodologies starting with the tools available for understanding the

architecture of the human breast including its tissue and cellular composition the volume discusses the importance of functional studies in breast cancer research especially with the help of laser capture microdissection which allows the separation of small amounts of tissue as well as specific cells for biochemical analysis in addition the authors address methodologies including stem cell separation which has helped in significantly understanding their role in normal breast development but also further the understanding of breast cancer and its therapeutic management the use of in vitro techniques and established cell lines for mechanistic studies in chemotherapeutic approaches have been invaluable will be discussed imaging techniques for evaluating in vitro and in vivo behavior of normal and cancerous breast tissue will be explored as it provides a better understanding of the physiopathology of cancer the volume will also discuss the molecular analysis of gene function in breast cancer through the transcriptomic and epigenomic profile more importantly the advancement of more refined techniques in sequencing will be covered this monograph will be a comprehensive authoritative and timely as it addresses the emerging approaches used in breast cancer research

the aim of this book is to contribute to understanding risk knowledge and to forecasting components of early flood warning particularly in the environment of tropical high mountains in developing cities this research covers a challenge taking into account the persistent lack of data limited resources and often complex climatic hydrologic and hydraulic conditions in this research a regional method is proposed for assessing flash flood susceptibility and for identifying debris flow predisposition at the watershed scale an indication of hazard is obtained from the flash flood susceptibility analysis and continually the vulnerability and an indication of flood risk at watershed scale was obtained based on risk analyses the research follows the modelling steps for flood forecasting development input precipitation is addressed in the environment of complex topography commonly found in mountainous tropical areas a distributed model a semi distributed model and a lumped model were all used to simulate the discharges of a tropical high mountain basin with a páramo upper basin performance analysis and diagnostics were carried out in order to identify the most appropriate model for the study area for flood early warning finally the weather research and forecasting wrf model was used to explore the added value of numerical
