anyone needing a brief accessible introduction to the major topics of abnormal psychology excerpt from an outline of abnormal psychology this outline presents a fairly complete list of the abnormal mental phenomena it shows how these phenomena are grouped into the syndromes manifested in the various psychoses and neuroses and it summarizes briefly the most important etiological facts and explanatory theories of the mental anomalies and diseases an attempt has been made to present in summary the various aspects of this many sided subject without disproportionate emphasis or neglect of any topic or theory the purpose of the outline is to serve as a guide for students of abnormal psychology in the absence of a comprehensive text book it is hoped that it will be found useful also by those medical students and students of social service who desire a general survey of this field but who have insufficient time for a regular supervised course or for extensive reading of the very much scattered literature it should of course be regarded as mainly directive and mnemonic and the references should be consulted for illustration of facts and exposition of theories about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works abnormal psychology perspectives exemplifies its subtitle by cohesively presenting the numerous individual perspectives of its expert contributors it presents the differing psychological perspectives by discussing various relevant paradigms with emphasis on the conceptual approaches and therapeutic interventions that have garnered the most empirical support in research literature as a ground up canadian text it features indigenous case studies legal and ethical issues prevention programs and ground breaking research as well as the history of abnormal psychology in this country key topics concepts of abnormality throughout history theoretical perspectives on abnormal behaviour classification and diagnosis psychological assessment and research methods anxiety obsessive compulsive and trauma related disorders dissociative and somatic symptom and related disorders psychological factors affecting medical conditions mood disorders and suicide schizophrenia spectrum and other psychotic disorders eating disorders substance related and addictive disorders the personality disorders sexual and gender identity disorders neurodevelopmental disorders behaviour and emotional disorders of childhood and adolescence aging and mental health therapies prevention and mental health promotion in the community mental disorder and the law

market appropriate for abnormal psychology in recent years psychology has considerably expanded and enriched its relations with medical practice first and foremost with psychiatry this orientation toward experimental abnormal psychology has been closely tied to the practical tasks of psychiatry differential diagnosis establishment of the structure and extent of impairment and the dynamics of mental disorders as affected by treatment etc experimental abnormal psychology has been no less important for the theoretical problems of psychology and psychiatry the study of pathological changes in mental processes helps in dealing with questions about the structure and formation of mental activity the research findings of abnormal psychology also have important implications for overcoming biologizing tendencies in the interpretation of human psychology the present book does not try to provide an exhaustive exposition of all divisions of abnormal psychology it introduces the reader only to those problems which at the present time seem to be best worked out experimentally the breakdown of intellectual capacity thought disorders the methodology of setting up an experiment in the psychiatric clinic and certain questions relating to motivational disturbances and psychological growth and decay some rewritten sections from the author's earlier book the pathology of thinking have been included v vi foreword the present volume is intended for psychology students for psychologists and for physicians working in psychiatry
