The Things We Do and Why We Do Them

2011-12-13

the things we do and why we do them argues against the common assumption that there is one thing called action which all reason giving explanations of action are geared towards sandis shows why all theories concerned with identifying the nature of our real reasons for action fail from the outset

women s relationships with each other are often defined by a rocky mix of emotions leading to anguish and confusion profoundly insightful the sister knot clarifies the complexities tensions and intimacy that form the bonds between sisters and the women who come to represent sisters and it demonstrates to any reader the fundamental strength to be found through understanding sisterhood

1882

how long can humans live is immortality possible just what is the aging process the aging and inevitable death of the human body have inspired more myths and outrageous quackery than anything else subject to scientific inquiry now comes a most fascinating book insightful and scholarly to provide what answers have emerged so far san francisco chronicle here at last preeminent cell biologist leonard hayflick presents the truth about human aging based on more than thirty years of pioneering research in the field how and why we age explores not only how our major biological systems change as we grow older but also examines the intangible alterations in our modes of thinking and feeling our moods and sexual desires our personality traits and our memories with the immediacy of the latest scientific discoveries dr hayflick explains how aging affects every part of the body and dispels many of the most persistent aging myths to show that hearts do not naturally get weaker with age regular exercise and a low fat diet won t slow aging curing cancer would only add two years

to the average sixty five year old american life curing heart disease however would add fourteen years only five percent of people over the age of sixty five are in nursing homes no human has lived or probably can live past 120 years gracefully written clearly organized and packed with essential facts and statistics how and why we age is a landmark study of the aging process for readers of all ages written in clear nontechnical language it is an excellent introduction to the scientific and demographic literature on this multifacetedsubject nature

The Pharmacist and Chemist

on 7 july 2005 julie nicholson s life was changed forever her daughter jenny was killed on her way to work in the london bombings shaking julie s beliefs with heartbreaking honesty and integrity julie tells her story of love tragedy and heartache for the first time

Adventures in Thule

1893

why have all human cultures today and throughout history made music why does music excite such rich emotion how do we make sense of musical sound these are questions that have until recently remained mysterious now the music instinct explores how the latest research in music psychology and brain science is piecing together the puzzle of how our minds understand and respond to music ranging from bach fugues to nursery rhymes to heavy rock philip ball interweaves philosophy mathematics history and neurology to reveal why music moves us in so many ways without requiring any specialist knowledge the music instinct will both deepen your appreciation of the music you love and open doors to music that once seemed alien dull or daunting offering a passionate plea for the importance of music in education and in everyday life you II never listen to music the same way again independent

Art and Handicraft in the Woman's Building of the World's Columbian Exposition, Chicago, 1893

The Sister Knot

1890

details the role our body plays in how we learn and how we can tap into our body s knowledge to excel in all facets of life ask someone to point to the part of their body responsible for their intelligence and it is highly likely that they will point at their head this assumption is understandable given that for centuries from descartes cogito ergo sum to the computer age this is what we have been told to think and yet we all share common experiences that have revealed the incomparable power of not thinking have you ever struggled to remember your pin number only to hold your fingers out and type it correctly with your hands played the piano without focusing on remembering the correct notes or listened to your gut feeling when under the pressure of a big decision all these instances prove that it is time to stop neglecting the role the body plays in our acquisition of knowledge and to explore how it is that brain and body combine to deliver what we view as uniquely human intelligence you never forgot how to ride a bike did you in this unique new book social and business anthropologist simon roberts looks at the pivotal role that our body plays in how we learn and reminds us of why we should learn to listen to it more often drawing upon an incredible range of cutting edge science real life examples and personal experience roberts explores the complexity of even the simplest of tasks that humans perform every day and goes on to explain how with a greater awareness of the processes at work we can tap into our full potential and excel in any area of our lives his proposition isn t the antidote to big data cold rationalism and reductionism but as embodied knowledge emerges from our engagement and interaction with the world the author underlines why intelligence does not solely reside in our brains if there s a single practical message to be taken from it it is that we should give more credit to the role of the body as a resource for learning about and understanding the world that means a more sleeves rolled up engag
