## **Research Methods in Applied Linguistics *2015-08-27***

from an early age deaf children excel in thinking about and remembering what they learn  
through visual spatial instruction this strength in information processing can be used in the  
mathematics classroom to achieve better learning outcomes this book discusses ways to  
teach deaf children about the four arithmetic operations through spatial representation in  
problem solving examples for the teaching of fractions and graphs are also included these  
visual representations are useful to support the children s understanding of mathematical

concepts and to promote peer collaboration the teaching programme was tested with deaf children in six schools with excellent results the children in the project made significantly more progress in one school year than expected for either deaf and hearing children over the same time this work was made possible through the generous support of the nuffield foundation
