my first encounter with the theory of harmony was during my last year at school 1975 this fascinating system of rules crystallized the intuitive knowledge of harmony I had acquired from years of piano playing and facilitated memorization transcription arrangement and composition for the next five years I studied music piano and science physics at the University of Melbourne this strange combination started me wondering about the origins of those music theory rules to what extent were they determined or influenced by physics mathematics physiology conditioning in 1981 the supervisor of my honours project in musical acoustics Neville Fletcher showed me an article entitled pitch consonance and harmony by a certain Ernst Terhardt of the Technical University of Munich by that stage I had devoured a considerable amount of largely unsatisfactory material on the nature and origins of harmony which enabled me to recognize the significance of Terhardt's article but it was not until I arrived in Munich the following year on Terhardt's invitation that I began to appreciate the consequences of his psychoacoustical approach for the theory of harmony that is what this book is about the book presents Terhardt's work against the broad context of music perception research past and present music perception is a multidisciplinary mixture of physics psychology and music where different theoretical approaches appear contradictory I try to show instead that they complement and enrich one another
