Techno-economic challenges of green ammonia as an energy vector presents the fundamentals, techno-economic challenges, applications and state-of-the-art research in using green ammonia as a route toward the hydrogen economy. This book presents practical implications and case studies of a great variety of methods to recover stored energy from ammonia and use it for power along with transport and heating applications, including its production, storage, transportation, regulations, public perception and safety aspects. As a unique reference in this field, this book can be used both as a handbook by researchers and a source of background knowledge by graduate students developing technologies in the fields of hydrogen economy, hydrogen energy and energy storage. It includes glossaries, case studies, practical concepts and legal, public perception and policy viewpoints that allow for thorough practical understanding of the use of ammonia as an energy carrier. Presented in a modular structure that can be used in sequence as a handbook in individual parts or as a field reference, it explores the use of ammonia both as a medium for hydrogen storage and an energy vector unto itself.

This book focuses on the simulation and modeling of internal combustion engines. The contents include various aspects of diesel and gasoline engine modeling and simulation, such as spray combustion, ignition in cylinder phenomena, emissions, exhaust heat recovery. It also explores engine models and analysis of cylinder bore, piston stresses and temperature effects. This book includes recent literature and focuses on current modeling and simulation trends for internal combustion engines. Readers will gain knowledge about engine process simulation and modeling.

helpful for the development of efficient and emission free engines a few chapters highlight the review of state of the art models for spray combustion and emissions focusing on the theory models and their applications from an engine point of view this volume would be of interest to professionals post graduate students involved in alternative fuels ic engines engine modeling and simulation and environmental research
