Human Reproduction

2017-03-06

in vitro fertilization ivf and other assisted reproductive technologies art have become a significant part of human reproduction with already one in 50 children worldwide being born through art and the demand steadily increasing to accommodate the various kinds of infertility problems new methods have been developed to increase ivf and art success rates and it has also become possible to treat sperm eggs and embryos in culture to improve reproductive success to increase the health state of an embryo and to prevent disease in the developing child human reproduction updates and new horizons focuses on recent developments and new approaches to study egg and sperm cells and embryo development as well as addressing the increasing demand for ivf and art to overcome infertility problems of various kinds that are encountered by an increasing number of couples worldwide the book includes 10 chapters written by experts in their specific fields to provide information on sperm selection techniques and their relevance to art in vitro maturation of human oocytes current practices and future promises molecular biology of endometriosis novel immunological aspects for the treatment of age induced ovarian and testicular infertility other functional diseases and early and advanced cancer immunotherapy mitochondrial manipulation for infertility treatment and disease prevention novel imaging techniques to assess gametes and preimplantation embryos clinical application of methods to select in vitro fertilized embryos new horizons developments in time lapse morphokinetic analysis of mammalian embryos the non human primate model for early human development cytoskeletal functions defects and dysfunctions affecting human fertilization and embryo development this book will appeal to a large interdisciplinary audience including researchers from both the basic science and medical communities it will be a valuable reference for ivf clinicians patients and prospective patients who are considering art procedures embryologists cell biologists and students in the field of reproduction

Epidemiology of Human Reproduction

1988-09-30

this comprehensive overview covering the field of reproductive epidemiology examines the impact of environmental factors related to embryonic and fetal development innovative techniques are highlighted illustrating special problems related to reproductive epidemiology specific environmental risks are addressed separately concluding with a chapter on risk assessment and information problems throughout the text is supported with over 70 illustrations of new findings never before published this is an invaluable resource for scientists in the field of reproductive epidemiology

Physiology of Human Reproduction

2021-03-22

physiology of human reproduction provides students with a concise and accessible overview of more than 200 vital concepts from the basic physiology of the male and the nonpregnant female to fertilization embryonic and fetal growth labor lactation and more presented in a readable style key terms are highlighted throughout the main text to enable students to quickly find a concept and read the appropriate information whether reading the book from cover to cover or using a focused approach to learn about specific concepts readers will find this textbook to be an invaluable tool for increasing their understanding of human reproduction an essential companion for standard anatomy and physiology courses this student friendly textbook covers physiology of the male the physiology of the nonpregnant female pregnancy and lactation and age related changes such as menopause discusses pregnancy birth

control and the reproductive system in childhood adolescence and puberty describes the anatomy physiology and phases of the human sexual response explains genetic conditions and disorders including androgen insensitivity syndrome and kallman s syndrome physiology of human reproduction is a must have learning guide for students in the medical and life sciences including medicine nursing biology physiology and biomedicine as well as those in courses covering human reproduction and pregnancy

Human Reproduction

1997-02-20

concise introductory textbook examining human reproduction for advanced school and beginning university students

Hot Topics in Human Reproduction

2023-03-16

this new volume in the reproductive medicine for clinicians series of the international academy of human reproduction iahr focuses on current hot topics in the field their ethical and legal aspects and their impact on society it covers topics such as covid 19 religious and philosophical controversies possibilities that new technologies offer human reproductive cloning problems future challenges related to the heritable gene editing therapeutic use of stem cells and stem cell factors and the role of receptors in steroids hormone action this volume also offers an analysis of important innovations and new possibilities such as the use of artificial intelligence in reproductive medicine and the future of prenatal testing the volume also discusses the issues of pregnancies in advanced paternal age ethical and legal aspects of gametes donation sex preselection surrogate motherhood and infertility in overweight or obese pcos patients chapters on the ethical and legal aspects of fertility preservation in woman in children with cancer and in patients sparing treatments in gynecological oncology are also included this new volume in the series is a valuable resource for gynecologists obstetricians endocrinologists general practitioners and all specialists dealing with reproductive health

Exercise and Human Reproduction

2016-03-07

providing a comprehensive review of the interactions between exercise and human reproduction this unique text focuses on both the positive and negative consequences of sport and physical activity on male and female fertility and infertility and the biological mechanisms and processes behind them beginning with a review of the structure and function of the male and female reproductive systems as well as fertilization and gestation the discussion then turns to the physiology and endocrinology of sport and exercise which is further elaborated in subsequent chapters on the impact of physical activity hormonal changes pathologies and consequences of drug use for active men and women additional chapters address related topics such as the impact of sport on young athletes and developing reproductive potential physical activity and pregnancy the use of oral contraceptives in athletes oxidative stress and the impact of nutritional deficiencies on athletes fertility with a final chapter providing recommendations and therapeutic guidelines for exercise related reproductive disorders covering everything from the fundamental principles of sports physiology and human reproductive potential to the interaction between physical exercise and the endocrinology of the reproductive system exercise and human reproduction is an authoritative resource for helping clinicians understand how the reproductive system adapts to activity and exercise and offers strategies to avoid potential harm to human reproduction

Molecular and cytogenetic research advances in human reproduction - Volume II

2023-08-03

following a successful first edition this new book updates the revolutionary advances in stem cell science that may potentially impact human reproductive medicine the contents cover the production and regeneration of female and male germ cells trophoblasts and endometrium from human embryonic and adult stem cells new developments in hesc d

Stem Cells in Human Reproduction

2009-09-18

our knowledge of reproductive biology has increased enormously in recent years on cellular molecular and genetic levels leading to significant breakthroughs that have directly benefitted in vitro fertilization ivf and other assisted reproductive technologies art in humans and animal systems animal models and human reproduction presents a comprehensive reference that reflects the latest scientific research being done in human reproductive biology utilizing domestic animal models chapters on canine equine cow pig frog and mouse models of reproduction reflect frontier research in placental biology ovarian function and fertility non coding rnas in gametogenesis oocyte and embryo metabolism fertilization cryopreservation signal transduction pathways chromatin dynamics epigenetics reproductive aging and inflammation chapters on non human primate models also highlight recent advancements into such issues as human in vitro fertilization ivf and assisted reproductive technologies art this book offers animal scientists reproductive biology scientists clinicians and practitioners invaluable insights into a wide range of issues at the forefront of human reproductive health

Animal Models and Human Reproduction

2017-03-20

a must have reference text for any researcher interested in the biocultural determinants of human fertility and is appropriate as a textbook at the graduate level i expect it to remain a standard in the literature of demographic anthropology and reproductive ecology for many years to come american journal of physical anthropology

Dynamics of Human Reproduction

2012-12-06

this book is the product of the conference on nutrition and human reproduction supported and organized by the national institutes of child health and human development and held at the national institutes of health Bethesda Maryland in February 1977 the genesis of this conference came from the work of the subcommittee on nutrition and fertility of the committee on international nutrition programs of the national research council the purpose of the conference was to assemble scientists and program planners from a broad range of fields including nutrition epidemiology demography endocrinology sociology economics anthropology biostatistics and public health each individual brought his or her analytical skills and perspective to the meeting with the goal of developing a more coherent picture of the many facets of nutrition and reproduction the approach was to get a more comprehensive view by 1 clarifying terminology and definitions 2 reviewing recent and current work on the biological basis for nutrition fertility

interactions 3 reviewing biomedical and socioeconomic factors related to breast feeding to assess how this practice relates to maternal and infant nutrition and fertility 4 assessing some current analytical models for defining nutrition fertility interrelationships 5 reviewing recent field studies from africa asia and latin america which are examining the interrelationships of nutrition and reproduction

Nutrition and Human Reproduction

1972

issues in biomedical ethics general editors john harris university of manchester soeren holm university of copenhagen consulting editor ranaan gillon director imperial college health service london north american consulting editor bonnie steinbock professor of philosophy suny albany the late twentieth century has witnessed dramatic technological developments in biomedical science and the delivery of health care and these developments have brought with them important social changes all too often ethical analysis has lagged behind these changes the purpose of this series is to provide lively up to date and authoritative studies for the increasingly large and diverse readership concerned with issues in biomedical ethics not just healthcare trainees and professionals but also social scientists philosophers lawyers social workers and legislators the series will feature both single author and multi author books short and accessible enough to be widely read each of them focused on an issue of outstanding current importance and interest philosophers doctors and lawyers from several countries already feature among the authors lined up for the series it promises to become the leading channel for the best original work in this burgeoning field this volume the future of human reproduction brings together new work by an international group of contributors from various fields and perspectives on ethical social and legal issues raised by recent advances in reproductive technology these advances have put us in a position to choose what kinds of children and parents there should be the aim of the essays is to illuminate how we should deal with these possibilities for choice topics discussed include gender and race selection genetic engineering fertility treatment ovarian tissue transfer and post menopausal pregnancy the central focus of the volume is the interface between reproductive choice and public regulation the future of human reproduction is a roadmap for twenty first century reproductive technologies written by leading thinkers in the field for philosophers policy makers and clinicians however it will perhaps be equally useful for parents and other members of our most important social institutions as we struggle to cope with the rapidly changing reproductive horizon

The Prostaglandins: Clinical Applications in Human Reproduction

1998

this book gives an overview of the revolutionary advances in stem cell science that may potentially impact human reproductive medicine the contents cover the production and regeneration of female and male germ cells trophoblasts and endometrium from human embryonic and adult stem cells new developments in hesc derivation that will impact clinic

The Future of Human Reproduction

2006-12-05

published in 1999 this book discusses issues related to the current and possible future technological progress in genetic technology linked to in vitro fertilization specifically preimplantation diagnosis and germline gene therapy from a scientific and medical as well as from a social juridical and ethical point of view the 31 contributions are divided into six sections medical

and scientific view personal interests and moral implications moral rights and duties social concepts and moral implications choices and decision making and justice in health care and legal regulation

Stem Cells in Human Reproduction

2018-08-13

this book offers a vision of politics that govern the womb from antiquity be fertile and replenish the earth through the ages hysterectomy to extirpate women s hysteria up to the present time abortion wars assisted reproduction and into the future reprogenetics the artificial womb it explores how the womb has served humanity either tacitly or explicitly through the ages and examines how women have accepted and still perceive the rules created by men as natural including the new anti abortion laws in the usa because that is the way things are the book also explores how the emerging of assisted reproduction technologies and novel genetic tools reprogenetics will pose additional challenges to womb bearers as all women will be made to reproduce with ivf what is more the advent of the artificial womb is in sight the gender and social implications of this development would be enormous certainly not just another organ the womb has been and remains a powerful tool that cannot be left to the decisions of half of the population this book engages a wide audience including women and men professionals and laypersons who are interested in gender politics legislation women s health and ethics

study on thakars santhals gonds nagas and mavchis tribes of maharashtra nagaland orissa jharkhand and chattisgarh states of india

Manual of Oocyte Retrieval and Preparation in Human Assisted Reproduction

2012-12-06

the book that you hold in your hands is the second in a series the two titles in the series are the following genetic influences on human fertility and sexuality theoretical and empirical contributions from the biological and behavior sciences edited by joseph lee rodgers david c rowe warren b miller published by kluwer academic press 2000 the biodemography of human reproduction and fertility edited by joseph lee rodgers hans peter kohler published by kluwer academic press 2002 the series has published chapters by researchers who study human fertility from a particular perspective biodemography we welcome your interest and participation in this developing subfield or perhaps biodemography may be better referred to as a superfield because biodemography so naturally crosses interdisciplinary boundaries and because its application draws together researchers from disparate disciplines it may well be more appropriate to consider that biodemography subsumes a number of other disciplines rather than the other way around in this preface we will describe our own efforts and those of many others to promote and develop the study of human fertility using methods models and theories from both biological and demographic domains in december 1997 25 participants from three different countries gathered in tucson arizona for a small conference with the title genetic influences on fertility related processes that conference represented a fascinating blending of research from two apparently separate domains

Atlas of Human Reproduction

1991

in ethics and human reproduction christine overall blends feminist theory and philosophical expertise to provide a coherent analysis of a range of moral questions and social policy issues pertaining to human reproduction and the new reproductive

technologies topics covered include sex preselection artificial insemination prenatal diagnosis abortion in vitro fertilisation and embryo transfer surrogate motherhood and childbirth throughout the book the author examines the values and assumptions underlying common perceptions of sexuality and fertility the status of the foetus the value of children the nature of parenting and the roles of women in so doing she develops a feminist approach to answering questions about reproductive rights and freedoms the value of a genetic link between mother and their offspring the commodification of reproduction and the effects of reproductive technologies on women and children this book should be essential reading for anyone interested in the new reproductive technologies biomedical ethics and women s health

Frontiers in Human Reproduction

2012-10-11

regulating creation is a collection of essays featuring contributions by canadian and international scholars it offers a variety of perspectives on the role of law in dealing with the legal ethical and policy issues surrounding changing reproductive technologies

Ethics and Human Reproduction

2009

these essays explore the nature and limits of individual autonomy in law policy and the work of regulatory agencies authors ask searching questions about the nature and scope of the regulation of private lives from intimacies personal relationships and domestic lives to reproduction they question the extent to which the law does or should protect individual autonomy recent rapid advances in the development of new technologies particularly those concerned with human genetics and assisted reproduction have generated new questions practical social legal and ethical about how far the state should intervene in individual decision making is there an inevitable tension between individual liberty and the common good how might a workable balance between the public and the private be struck how indeed should we think about autonomy the essays explore the arguments used to create and maintain the boundaries of autonomy for example the protection of the vulnerable public goods of various kinds and the maintenance of tradition and respect for cultural practices contributors address how those boundaries should be drawn and interventions justified how are contemporary ethical debates about autonomy constructed and what principles do they embody what happens when those principles become manifest in law

Body Image, Human Reproduction, and Birth Control

2012-12-06

The Biodemography of Human Reproduction and Fertility

2013-05-20

this book includes a number of distinct religious and secular views on the anthropological ethical and social challenges of reproductive technologies in the light of human rights and in the context of global bioethics it includes contributions of bioethics experts from six major religions buddhism confucianism christianity islam hinduism and judaism as well as secular authors the chapters include commentaries discussing the content cross religious secular tradition to give a comparative perspective not only the volume editors but also the contributing authors took part in reviewing each others chapter making this a unique collected volume not common in interreligious dialogue today this text appeals to researchers and students working in the fields of bioethics and religious secular studies

Ethics and Human Reproduction (RLE Feminist Theory)

1976

with contributions from eric blyth ken daniels julia feast robert lee nina martin alexina mcwhinnie derek morgan clare murray sharon pettle claire potter jim richards and francoise shenfield the separation of procreation from conception has broadened notions of parenthood and created novel dilemmas a woman may carry a foetus derived from gametes neither or only one of which came from her or her partner or she may carry a foetus created using in vitro fertilisation ivf with the purpose of handing it to two other parents one neither or both of whom may be genetically related to the prospective child parents may consist of single sex couples only one of them genetically related to the child the prospective mother may be past her menopause and genetic parenthood after death is now achievable in a world increasingly reliant on medical science how can the argument that equates traditional with natural and novel with unnatural unethical be justified should there be legislation which is notoriously slow to change in a field driven by dazzling new possibilities at ever faster rate particularly when restrictions differ from country to country so that those who can afford it travel elsewhere for their treatment of choice whose rights are paramount the adults hoping to build a family or the prospective child ren s future well being on what basis can apparently competing rights be regulated or adjudicated and how and to what extent can these be enforced in practice

Human Reproduction: Physiology

2017-01-01

this book contains an access code in the starting pages to access the 41 online tests nta neet 40 days crash course in biology is the thoroughly revised updated redesigned study material developed for quick revision and practice of the complete syllabus of the neet exams in a short span of 40 days the book can prove to be the ideal material for class 12 students as they can utilise this book to revise their preparation immediately after the board exams the book contains 38 chapters of class 11 12 and each chapter contains neet 5 years at a glance i e past 5 years questions of 2018 2014 with topic wise analysis detailed mind maps covers entire jee syllabus for speedy revision important critical points of the chapter for last minute revision tips to problem solving to help students to solve problems in shortest possible time exercise 1 concept builder a collection of important topic wise mcqs

to build your concepts exercise 2 concept applicator a collection of quality mcqs that helps sharpens your concept application ability answer keys detailed solutions of all the exercises and past years problems are provided at the end of the chapter online chapter tests 38 tests of 15 questions for each chapter to check your command over the chapter 3 online full syllabus mock tests to get familiar with exam pattern and complete analysis of your performance

Regulating Creation

2009-03-04

understanding immunology is increasingly important in obstetrics and gynecology written primarily to meet the needs of practicing obstetricians and gynecologists this book explores the role of immunological processes in reproduction it presents immunologic concepts and illustrates important points with examples familiar to the clinician the boo

Regulating Autonomy

2013-06-21

a much needed overview of the available information now accumulating to indicate that assisted reproductive technologies are generally safe for both babies and mothers however the literature abounds with reports of a higher risk of obstetric and perinatal complications regarding the long term outcomes for both women and children the data are still scarce the chapters summarized in this book review the current knowledge on long term safety of assisted reproduction and indicate the need for continued research to cover the lack of data in some specific patient groups and for recently developed treatments that only have a short period of follow up

Testicular Hormones—Advances in Research and Application: 2013 Edition

1988

essential reproduction provides an accessible account of the fundamentals of reproduction within the context of cutting edge knowledge and examples of its application the eighth edition of this internationally best selling title provides a multidisciplinary approach integrating anatomy physiology genetics behaviour biochemistry molecular biology and clinical science to give thorough coverage of the study of mammalian reproduction key features contains discussion of the latest on conceptual informational and applied aspects of reproduction new pedagogical features such as clinical case studies at the end of each chapter better use of boxed material to improve separation of narrative text from ancillary information highlighted key words for ease of reference relate to summary of key points introduction now split into two sections expanded content in fetal challenges and society and reproduction substantial rearrangement and updating in making sperm controlling fertility and restoring fertility

Human Reproduction

2022-01-03

this book is the first to explain fully the crucial role of folliculo luteal function in recurrent miscarriage unexplained infertility preterm birth intrauterine growth retardation preeclampsia random chromosomal abnormalities and age related

reproductive disorders in addition it describes treatments to avoid these conditions and proposes a novel method hormonal wedge resection that can successfully cure infertility associated with polycystic ovary syndrome importantly the conclusions drawn in this book are based on the therapeutic results observed in a representative patient population the method developed by the author to quantitatively diagnose the hormonal insufficiency of ovulatory cycles folliculo luteal insufficiency fli has made it possible to recognize the formerly unclear importance of this function in human reproduction folliculo luteal function determines the conditions of placentation and thus the features of the developed placenta and the outcome of pregnancy different grades of fli are associated with consequences of varying severity that can be prevented by normalization of folliculo luteal function prior to conception this book will be required reading for all obstetricians and gynecologists
