human physiology an elementary text book of anatomy physiology and
hygiene from a considerable experience with both very elementary and
more advanced classes the author has been led to certain conclusions in
regard to the teaching of elementary physiology and hygiene it is not
proposed to enter here into a discussion of the correctness of these
conclusions but a brief statement of a few principles that seem
fundamental may perhaps be allowable the chief object of teaching
physiology in the public schools is to train the pupils to keep their
bodies in health the mere teaching of anatomy and physiology will not
accomplish this for the pupil cannot master the structure and workings
of the body in a way that will enable him to frame the laws of health
and apply them neither can the desired end be reached by teaching rules
of health without an anatomical and physiological basis for without such
a basis hygiene is an intangible and an elusive subject the author has
therefore concluded that a conservative middle course is wiser than
either of the extremes of method mentioned above an elementary text in
physiology should be a balanced text containing sufficient anatomy to
make clear the broader outlines of the structure of the human body
enough physiology to make plain the great laws according to which the
body lives and a full discussion of how a violation of these laws may be
avoided for the introduction of certain new matter as for example the
cell idea the work of enzymes and matter relating to germ diseases there
is little need for explanation the groundwork of physiology and

excerpt from human anatomy physiology and hygiene a text book for
schools academies colleges in preparing this book we have aimed to give
facts in clear concise language and as free as possible from technical
terms all speculations and hypotheses have been omitted as inconsistent
with a work of this kind our endeavor has been to present the subject
both to the student and to the general reader in such a form that the
facts may be easily grasped and readily retained the anatomy and
physiology are given first because a knowledge of the location and the
functions of the organs of the body is needed before we can understand
how to preserve them in a state of health we must be acquainted with a
law before we can keep it and we must know the laws which govern our
systems before we can observe them the body is composed of many organs
each of which performs its part in the economy of the system yet the
functions of these organs are closely connected with each other and they
all act so as to produce a unity and harmony in the whole being about
