this book covers the topic of eddy current nondestructive evaluation the most commonly practiced method of electromagnetic nondestructive evaluation nde it emphasizes a clear presentation of the concepts laws and relationships of electricity and magnetism upon which eddy current inspection methods are founded the chapters include material on signals obtained using many common eddy current probe types in various testing environments introductory mathematical and physical concepts in electromagnetism are introduced in sufficient detail and summarized in the appendices for easy reference worked examples and simple calculations that can be done by hand

are distributed throughout the text these and more complex end of chapter examples and assignments are designed to impart a working knowledge of the connection between electromagnetic theory and the practical measurements described the book is intended to equip readers with sufficient knowledge to optimize routine eddy current nde inspections or design new ones it is useful for graduate engineers and scientists seeking a deeper understanding of electromagnetic methods of nde than can be found in a guide for practitioners

applications of graph theory and topology in inorganic cluster and coordination chemistry is a text reference that provides inorganic chemists with a rudimentary knowledge of topology graph theory and related mathematical disciplines the book emphasizes the application of these topics to metal clusters and coordination compounds the book s initial chapters present background information in topology graph theory and group theory explaining how these topics relate to the properties of atomic orbitals and are applied to coordination polyhedra subsequent chapters apply these ideas to the structure and chemical bonding in diverse types of inorganic compounds including boron cages metal clusters solid state materials metal oxide derivatives superconductors icosahedral phases and carbon cages fullerenes the book s final chapter introduces the application of

topology and graph theory for studying the dynamics of rearrangements in coordination and cluster polyhedra
