efficient estimation of word representations in
vector space tomas mikolov kai chen greg corrado
jeffrey dean we propose two novel model
architectures for computing continuous vector
representations of words from very large data sets
the quality of these representations is measured
in a word similarity task

the future of employment how susceptible Dec 31
2023 [] september 17 2013 abstract we examine how
susceptible jobs are to computerisation to assess
this we begin by implementing a novel methodology
to estimate the probability of computerisation for
702 detailed occupations using a gaussian process

this paper shows how long short term memory recurrent neural networks can be used to generate complex sequences with long range structure simply by predicting one data point at a time the approach is demonstrated for text where the data are discrete and online handwriting where the data are real valued
