A Compilation of Selected Papers from the Employment and Training Administration's 2003 Biennial National Research Conference

2003

the purpose of this special issue is to investigate topics related to sustainability issues in the new era especially in industry 4 0 or other new manufacturing environments under industry 4 0 there have been great changes with respect to production processes production planning and control quality assurance internal control cost determination and other management issues moreover it is expected that industry 4 0 can create positive sustainability impacts along the whole value chain there are three pillars of sustainability including environmental sustainability economic sustainability and social sustainability this special issue collects 15 sustainability related papers from various industries that use various methods or models such as mathematical programming activity based costing abc material flow cost accounting fuel consumption model artificial intelligence ai based fusion model multi attribute decision model madm and so on these papers are related to carbon emissions carbon tax industry 4 0 economic sustainability corporate social responsibility csr etc the research objects come from china taiwan thailand oman cyprus germany austria and portugal although the research presented in this special issue is not exhaustive this special issue provides abundant significant research related to environmental economic and social sustainability nevertheless there still are many research topics that require our attention to solve problems of sustainability

Modelling and Analysis of Sustainability Related Issues in New Era

this book constitutes the refereed proceedings of the 26th international conference on case based reasoning research and development iccbr 2018 held in stockholm sweden in july 2018 the 39 full papers presented in this book were carefully reviewed and selected from 77 submissions the theme of iccbr 2017 the future of cbr was highlighted by several activities these papers which are included in the proceedings address many themes related to the theory and application of case based reasoning and its future direction topics included multiple papers on textual cbr and a number of cognitive and human oriented papers as well as hybrid research between cbr and machine learning

Case-Based Reasoning Research and Development

2018-10-08

this book is a tribute to the work of maurizio grassini econometrician and model builder the selection of his works in the first part of the volume is mainly devoted to research issues of multisectoral modelling in fact m grassini has dedicated a large part of his professional life to building and developing the intimo model for the italian economy within the inforum research project the book does not aim to be a celebration of the past but takes a look at the future of the multisectoral modelling which m grassini has contributed so much to in the second part of the book colleagues and friends who have encountered m grassini in the professional sphere on matters of quantitative economic analysis or still working with him on interindustry models have given their contribution to look at the future prospects of a research field firmly based on the experience of what has been done so far

Geological Survey Water-supply Paper

1982

evolutionary computation and optimization algorithms in software engineering applications and techniques lays the foundation for the successful integration of evolutionary computation into software engineering it surveys techniques ranging from genetic algorithms to swarm optimization theory to ant colony optimization demonstrating their uses and capabilities these techniques are applied to aspects of software engineering such as software testing quality assessment reliability assessment and fault prediction models among others to providing researchers scholars and students with the knowledge needed to expand this burgeoning application

NASA Technical Paper

1991

the two volume set ccis 1959 and 1960 constitutes the refereed post conference proceedings of the 38th ccf national conference on computer applications ccf ncca 2023 held in suzhou china during july 16 20 2023 the 39 revised full papers presented in these proceedings were carefully reviewed and selected from 197 submissions the papers are organized in the following topical sections volume i artificial intelligence and application volume ii data science and technology pattern recognition and machine learning network communication and security frontier and comprehensive applications

NASA Technical Paper

1990

modern economies depend on innovation in services for their future growth service innovation increasingly depends on information technology and digitization of information processes designing new services is a complex matter since collaboration with other companies and organizations is necessary service innovation is directly related to business models that support these services i e services can only be successful in the long run with a viable business model that creates value for its customers and providers this book presents a theoretically grounded yet practical approach to designing viable business models for electronic services including mobile ones i e the stof model and based on it the stof method the stof model provides a holistic view on business models with four interrelated perspectives i e service technology organization and finance it elaborates on critical design issues that ultimately shape the business model and drive its viability

U.S. Geological Survey Water-supply Paper

1982

european societies and economies continue to rely on services of general interest sgi to produce legitimacy fair access to basic services such as transport energy and communication infrastructures education and health care is regarded as a cornerstone of the european model of society as a way to promote territorial cohesion and lastly as a right held by every eu citizen these collective regional and individual perspectives on services of general interest are in the focus of this edited volume in

the light of postmodern societies demographic aging migratory patterns globalization and economic crises territorially sensitive challenges arise and targeted solutions are needed accordingly

the background for the workshop on cohesive sediment dynamics special reference to physical processes in estuaries is briefly outlined in chapter i here i wish to acknowledge those whose support i consider to be pivotal to this under taking my deepest appreciation goes to cynthia vey whose organizational skills and dedicated effort made the completion of this volume possible thanks are also due to gail terry for workshop organization jean branson for word processing and lillean pieter for helping with drawings finally i must express my sincere appreciation to arthur ezra 9f the national science foundation for providing support through grant no cee 8401185 for the workshop and to hsiang wang for depart mental encouragement with deepest regret i must note the untimely death of ranjan ariathurai 39 on june 5 1985 before this volume could be published he was a guiding force to many within the small group of researchers in cohesive sediment dynamics and his professional brilliance and inspirational personal qualities constituted the true spirit behind the workshop i trust this volume will serve albeit in a small way as a fitting memory to this spirit and to the remarkable professional contributions ranjan made during his short career professor ray b krone professor emmanuel partheniades department of civil engineering department of engineering sciences university of california university of florida davis california gainesville florida table of contents chapter page i introduction ashish j mehta 1 ii

a major theme of this book is the use of computers for supporting collaborative learning this is not surprising since computer supported collaborative learning has become both a widespread educational practice and a main domain of research moreover collaborative learning has deep roots in asian educational traditions given the large number of researchers within this field its scope has become very broad under this umbrella one finds a variety of more specific topics such as interaction analysis collaboration scripts e g the jigsaw script communities of practice sociocognitive conflict resolution cognitive apprenticeship various tools for argumentation online discussion or collaborative drawing tools whiteboards collaborative writing and the role of facilitators most research work on collaborative learning focuses on

interactions rather than on the contents of environments which had been the focus in the previous decades of learning technology research however there is no reason to focus on one aspect to the detriment of the other the editors are pleased that the selected papers also cover multiple issues related to the storage representation and retrieval of knowledge ontologies for learning environments and the semantic web knowledge bases and data mining meta data and content management systems and so forth this publication also reveals a growing interest for non verbal educational material namely pictures and video materials which are already central to new popular web based applications this book includes contributions that bridge both research tracks the one focusing on interactions and the other on contents the pedagogical use of digital portfolios both for promoting individual reflections and for scaffolding group interactions

Web Technologies: Concepts, Methodologies, Tools, and Applications

2009-10-31

the earlier editions of this title have been best selling definitive references for those needing technical information about automotive fuels this long awaited latest edition has been thoroughly revised and updated yet retains the original fundamental fuels information that readers find so useful this book is written for those with an interest in or a need to understand automotive fuels because automotive fuels can no longer be developed in isolation from the engines that will convert the fuel into the power necessary to drive our automobiles knowledge of automotive fuels will also be essential to those working with automotive engines small quantities of fuel additives increasingly play an important role in bridging the gap that often exists between fuel that can easily be produced and fuel that is needed by the ever more sophisticated automotive engine this book pulls together in a single extensively referenced volume the three different but related topics of automotive fuels fuel additives and engines and shows how all three areas work together it includes a brief history of automotive fuels development followed by chapters on automotive fuels manufacture from crude oil and other fossil sources one chapter is dedicated to the manufacture of automotive fuels and fuel blending components from renewable sources including e fuels the safe handling transport and storage of fuels from all sources are covered new combustion systems to achieve reduced emissions and increased efficiency are discussed and the way in which the fuels physical and chemical characteristics affect these combustion processes and the emissions produced are included as co2 is now an important emission there is also discussion on engine fuel system development and how these different systems affect the corresponding fuel requirements because the book is for a global market fuel system technologies that only exist in the legacy fleet in some markets are included the way in which fuel requirements are developed and specified is discussed this co
