the need for a scientifically literate citizenry one that is able to think critically and engage productively in the engineering design process has never been greater by raising engineering design to the same level as scientific inquiry the next generation science standards ngss have signaled their commitment to the integration of engineering design into the fabric of science education this call has raised many critical questions how well do these new standards represent what actually engineers do where do the deep connections among science and engineering practices lie to what extent can or even should science and engineering practices co exist in formal and informal educational spaces which of the core science concepts are best to leverage in the pursuit of coherent and compelling integration of engineering

practices what science important content may be pushed aside this book tackles many of these tough questions head on all of the contributing authors consider the same core question given the rapidly changing landscape of science education including the elevated status of engineering design what are the best approaches to the effective integration of the science and engineering practices they answered with rich descriptions of pioneering approaches critical insights and useful practical examples of how embodying a culture of interdisciplinarity and innovation can fuel the development of a scientifically literate citizenry this collection of work builds traversable bridges across diverse research communities and begins to break down long standing disciplinary silos that have historically often hamstrung well meaning efforts to bring research and practice from science and engineering together in meaningful and lasting ways

the gender gap in science technology engineering and mathematics stem varies greatly from country to country and the number of japanese women in these fields remains relatively few this prompts us to ask why the proportion of female scientists in japan is still remarkably low and what measures the government universities and research institutes are taking to address this issue this book sheds light on historical developments and the current gender equality situation in japan through the lens of women in stem it shows how a policy of gender equality in science and engineering has been introduced through the coordinated efforts of academia scientific societies and the government and how this has led to a slow but steady increase in female representation the book draws on extensive data including interviews with government officials scientists and educators in japan to provide a revealing case study on how the underrepresentation of

women in the fields of science technology and engineering has been approached and dealt with by a national government it heralds a new era for female scientists by showcasing several programmes undertaken by government universities and national research institutions to support multiple career paths for and the progression of female scientists in japan tracing the historical development of japan s policies towards women in science and education this book will be welcomed by students and scholars interested in japanese studies comparative social policy gender studies employment and the history of science and technology

the united states economy relies on the productivity entrepreneurship and creativity of its people to maintain its scientific and engineering leadership amid increasing economic and educational globalization the united states must aggressively pursue the innovative capacity of all its people women and men however women face barriers to success in every field of science and engineering obstacles that deprive the country of an important source of talent

without a transformation of academic institutions to tackle such barriers the future vitality of the u s research base and economy are in jeopardy beyond bias and barriers explains that eliminating gender bias in academia requires immediate overarching reform including decisive action by university administrators professional societies federal funding agencies and foundations government agencies and congress if implemented and coordinated across public private and government sectors the recommended actions will help to improve workplace environments for all employees while strengthening the foundations of america s competitiveness
