Online Interface/sludge Blanket Level Analyzers

2003-01-01

presents results of field test data conducted on four online interface sludge blanket level analyzers to evaluate the accuracy reliability and maintenance requirements of each analyzer for application in water and wastewater treatment

2000

benefiting from both time domain and frequency domain signal processing techniques multicarrier systems have the potential for achieving high spectral efficiency high flexibility and low complexity wireless communications multicarrier techniques therefore constitute the promising techniques for implementation of future generations of wideband broadband and ultra wideband systems multicarrier communications offers comprehensive and in depth evaluation of numerous topics in the area covering the fundamental principles of spread spectrum and multicarrier cdma as well as more advanced topics such as multiuser detection mud multiuser transmitter preprocessing mutp mimo and space time processing it examines ofdm and various multicarrier cdma within an unified framework and provides analytical approaches and formulas for error performance evaluation of numerous multicarrier systems examines mud and mutp in parallel to illustrate the strong duality between receiver optimization and transmitter optimization comprehensively establishes the theory of noncoherent mud and noncoherent interference suppression details the body of knowledge on mimo theory and space time multicarrier communications contains tables diagrams and figures to illustrate the performance results practicing electrical engineers and researchers in wireless communications will find multicarrier communications an invaluable guide it will also be of interest to senior undergraduate and graduate students on wireless communications courses
