## water pollution wikipedia

Nov 18 2023

water pollution is the contamination of water bodies (lakes, rivers, oceans, aquifers and groundwater) by hazardous materials and chemicals. This is a major environmental problem in most parts of the world. It is caused by a wide variety of sources, including industrial and municipal discharges, agricultural runoff, and atmospheric deposition. The most common pollutants are nutrients, heavy metals, and pesticides. These pollutants can harm aquatic life, reduce water quality, and pose a risk to human health.
