become a successful evidence based practitioner how do you evaluate the evidence is the information accurate relevant and meaningful for clinical decision making did the design fit the research questions and was the analysis and interpretation of data appropriate here are all the materials you need to take your first steps as evidence based practitioners how to use the design data and analysis of research as the foundation for effective clinical decision making you ll find support every step of the way as you progress from the foundations of clinical research and concepts of measurement through the processes of designing studies and analyzing data to writing their own research proposal

Technical Abstract Bulletin 1978

improve outcomes through evidence based therapy this practical easy to use guide uses a five step process to show you how to find appraise and apply the research in the literature to meet your patient s goals you ll learn how to develop evidence based questions specific to your clinical decisions and conduct efficient and effective searches of print and online sources to identify the most relevant and highest quality evidence then you ll undertake a careful appraisal of the information interpret the research and synthesize the results to generate valid answers to your questions and finally you ll use the critically appraised topic cat tool to communicate your findings

exercise testing is a versatile tool for health purposes when used in combination with specific devices and sensors it can provide valuable diagnostic and prognostic information in a wide range of populations exercise testing outcomes are also useful for training prescriptions and defining responses to clinical trials evaluating interventions whole body maximal tests e g cardiopulmonary exercise testing field tests e g walking tests and modalities isolating a muscle group e g isokinetic endurance testing all have their advantages and limits and should be viewed as complementary recent advances in wearable technology and artificial intelligence provide unique opportunities to broaden the application of these tests and facilitate their interpretation in the meantime the clinimetric properties of some widely used exercise tests are still poorly documented in several clinical populations which hampers optimal diagnosis and management moreover most exercise tests used in clinical practice are suffering from a lack of ecological validity and there is a need to develop and valid new testing modalities that best mimic daily life functioning this research topic aims to extend our knowledge regarding the validity and clinical utility of various exercise testing modalities and facilitate their interpretation this topic supports a multimodal approach to exercise testing and welcomes reports investigating either whole body or local muscle testing submission of research combining different exercise modalities and investigating their potential links are particularly encouraged inter disciplinary research with studies integrating

concepts tools and data from various disciplines like exercise physiology biomechanics and psychology are of particular interest for this research topic this topic is not restricted in terms of age medical conditions or type of disease but manuscripts must have clear implications for human health

surveillance early detection control and eradication of notifiable animal diseases is of critical importance for countries in order to maintain or improve their animal health status this requires the collaboration of all stakeholders involved including animal health authorities livestock industry and veterinary research institutions among others

prevention control and eradication programs must take into account the characteristics of the host including potential reservoirs the pathogen transmissibility virulence and the environment temperature animal density but also the socio economic context in which they have to be implemented highly influenced by funding availability while at the same time guaranteeing compliance with international trade regulations this has led to the adoption of a wide range of approaches to address the risk posed by specific pathogens in different countries and at the same time similar strategies have yielded very different results in different regions this research topic includes a variety of manuscripts focusing on different aspects of surveillance control and eradication of diseases of critical importance for livestock including cattle swine and wildlife in an attempt to provide an overview of the current situation in different countries
