Saunders' Pocket Essentials of Clinical Medicine 1999 69 but usually such a condition is terminal and denotes irreversible pump failure many patients can however return to useful activity avoiding sudden unaccustomed exertion and being maintained on diuretics potassium and digoxin with suitable surveillance curative surgery may be possible in those with heart valve lesions heart transplantation remarkable technical success has been achieved and patients have survived for up to two years after operation it is however difficult to decide which cases are suitable for early cases may benefit from less drastic measures and late cases have involvement of lungs and liver lessening the chances of success there are problems too of transplant rejection immunosuppression and of the ethics of obtaining donor hearts there may be a greater place for the use of plastic pumps which are being developed for use as temporary supports to the circulation e.g. in myocardial infarction until the heart function improves prevention of cardiac disease a summary congenital heart disease should be recognized early for cure is often possible rheumatic heart disease has diminished with the conquest of the streptococcus but where it has occurred early recognition and treatment of valvular complications will prevent heart failure hypertension and its effects can be remedied before the stage of heart failure we are left with

arteriosclerotic heart disease and while alleviation of its effects is possible prevention awaits understanding of the arteriosclerotic process meantime we can advise the control of obesity and the cessation of cigarette smoking

Essentials of Internal Medicine 1994 reprint of the original first published in 1871 the publishing house anatiposi publishes historical books as reprints due to their age these books may have missing pages or inferior quality our aim is to preserve these books and make them available to the public so that they do not get lost
