although the official compendia define a drug substance as to identity purity strength and quality they normally do not provide other physical or chemical data nor do they list methods of synthesis or pathways of physical or biological degradation and metabolism such information is scattered throughout the scientific literature and the files of pharmaceutical laboratories edited by the associate director of analytical research and development for the american association of pharmaceutical scientists analytical profiles of drug substances and excipients brings this information together into universities phytochemicals as bioactive agents focuses on the mechanisms of action of phytochemicals identified as displaying bioactivity in the prevention of cancer heart disease and other diseases and the prospects for developing functional foods containing these bioactive compounds an internationally recognized group of experts presents the latest research findings on the antimutagenic and anticarcinogenic effects of tea and tea constituents chemoprevention provided by plants in the family cruciferae and genus allium by altering carcinogen metabolism anticarcinogenic effects of carotenoids and curcumins the chemistry and application of alfalfa saponins the bioactive components of rice bran and rice oil the effects of garlic on lowering serum cholesterol and using phytochemicals to optimize gastrointestinal tract health and function also included are chapters on strategies to identify bioactive phytochemicals in foods the design conduct and interpretation of clinical trials to test phytochemicals for expected bioactivity compounds that have potential use as phytochemical antimicrobial agents pam in food processing and designing bioactive functional foods this book will be of interest to food scientists and technologists food process engineers biochemists nutritionists public health professionals and entrepreneurs involved in the design processing and marketing of new functional food products this volume presents a comprehensive collection of state of the art advances in the field of solid state ionic materials and the design fabrication and performance of devices that use them such as lithium batteries gas sensors fuel cells supercapacitors and electrochromic displays these electrochemical devices are becoming pervasive in our technologically driven lifestyles the book includes research activities being carried out in the new millennium through special keynote addresses as well as invited and contributed papers related to experimental and theoretical modeling in solid state ionics the excellent coverage of topics arranged in such a fashion helps students and beginners to understand the field with enthusiasm it also encompasses various experimental techniques often employed in solid state ionics research such as xrd xps hole burning spectroscopy edax exafs sem thermal analysis techniques ac impedance spectroscopy and other electrochemical techniques such as cyclic voltammetry galvanostatic and potentiostatic electrochemical techniques theoretical and applied aspects of mixed conduction for applications mainly in solid oxide fuel cells occupy a portion of the text finally this volume demonstrates the amount of research activities being carried out in this application oriented field solid state ionics will be of interest to all in the solid state ionics community including chemists physicists materials scientists and electrochemists both in industry and in research the 14 papers in this volume were first presented at the fifth international galen colloquium held in lille in 1995 and represent a first attempt to explore systematically this vast complicated area the contributors cover a wide variety of themes broadly grouped as the epistemology method and practice of medicine galen and pharmacological tradition galen s pharmacological treatises and the transmission of pharmacological 1864 it is used in over 100 countries and remains an essential global reference in pharmaceutical research and development and quality control this book explores how these standards have been achieved through a comprehensive review of the history and development of the pharmacopoeias in the uk from the early london edinburgh and dublin national pharmacopoeias to the creation of the british pharmacopoeia and its evolution over 150 years trade in medicinal substances and products has always been global and the british pharmacopoeia is placed in its global context as an instrument of the british empire as it first sought to cover the needs of countries such as india and latterly as part of its role in international harmonisation of standards in europe and elsewhere the changing contents of the pharmacopoeias over this period reflect the changes in medical

practice and the development of dosage forms from products dispensed by pharmacists to commercially manufactured products from tinctures to the latest monoclonal antibody products the book will be of
