Cat Dissection 2002-08-27

as its title indicates this is a book for use in a practical comparative anatomy course it is intended for a somewhat unusual class of student and consequently its contents outlook and method of treatment are unlike those of the standard texts in this subject as stated in the preface it is assumed that the student has already done a course in elementary zoology including the usual vertebrate types and has also examined in more detail a mammal unless this mammal were man a number of comparisons in the book would be missed to obtain full benefit from it the student should obviously have taken the preliminary medical studies including a fair amount of human anatomy this is not meant to imply that the student of advanced zoology cannot get many useful hints and fresh points of view from its pages he undoubtedly can the types treated in a series of regional dissections are the lamprey the dogfish squalus neoturus the lizard and the dog as it is intended for assistance in dissection information regarding osteology and the details of the central nervous system have been purposely omitted and conversely the muscles are treated somewhat more fully than is customary
