how can the tracks of dinosaurs best be interpreted and used to reconstruct them in many mesozoic sedimentary rock formations fossilized footprints of bipedal three toed tridactyl dinosaurs are preserved in huge numbers often with few or no skeletons such tracks sometimes provide the only clues to the former presence of dinosaurs but their interpretation can be challenging how

different in size and shape can footprints be and yet have been made by the same kind of dinosaur how similar can they be and yet have been made by different kinds of dinosaurs to what extent can tridactyl dinosaur footprints serve as proxies for the biodiversity of their makers profusely illustrated and meticulously researched noah s ravens quantitatively explores a variety of approaches to interpreting the tracks carefully examining within species and across species variability in foot and footprint shape in nonavian dinosaurs and their close living relatives the results help decipher one of the world s most important assemblages of fossil dinosaur tracks found in sedimentary rocks deposited in ancient rift valleys of eastern north america those often beautifully preserved tracks were among the first studied by paleontologists and they were initially interpreted as having been made by big birds one of which was jokingly identified as noah s legendary raven

the baby boom of 1945 65 produced the biggest richest generation that Britain has ever known today at the peak of their power and wealth baby boomers now run our country by virtue of their sheer demographic power they have fashioned the world around them in a way that meets all of their housing healthcare and financial needs in this original and provocative book David Willetts shows how the baby boomer generation has attained this position at the expense of their children social cultural and economic provision has been made for the reigning section of society whilst the needs of the next generation have taken a back seat Willetts argues that if our political economic and cultural leaders do not begin to discharge their obligations to the future the young people of today will be taxed more work longer hours for less money have lower social mobility and live in a degraded environment in order to pay for their parents quality of life baby boomers worried about the kind of world they are passing on to their children are beginning to take note however whilst the imbalance in the quality of life between the generations is becoming more obvious what is less certain is whether the older generation will be willing to make the sacrifices necessary for a more equal distribution the pinch is a landmark account of intergenerational relations in Britain

it is essential reading for parents and policymakers alike
