this book gathers a selection of the best papers presented at the joint international conference icieom cio iie 2015 offering recent research on industrial engineering management and operations from an international and interdisciplinary perspective it includes contributions from different fields such as operations research modeling and simulation production and service management and logistics information systems and quality and as such is of interest to both researchers and practitioners reflecting the interconnected nature of today s production systems characterized by intense flows of goods information

and individuals between companies and nations it is a valuable resource for anyone wanting an in depth understanding of the field to guide managerial practice in order to take full advantage of existing opportunities

numerical and computer methods in structural mechanics is a compendium of papers that deals with the numerical methods in structural mechanics computer techniques and computer capabilities some papers discus the analytical basis of the computer technique most widely used in software that is the finite element method this method includes the convergence in terms of variation principles isoparametrics hybrid models and incompatible displacement models other papers explain the storage or retrieval of data as well as equation solving algorithms other papers describe general purpose structural mechanics programs alternatives to and extension of the usual finite element approaches another paper explores nonlinear dynamic finite element problems and a direct physical approach to determine finite difference

models special papers explain structural mechanics used in computing particularly those related to integrated data bases such as in the structures oriented exchange system of the office of naval research and the integrated design of tanker structures other papers describe software and hardware capabilities for example in ship design fracture mechanics biomechanics and crash safety the text is suitable for programmers computer engineers researchers and scientists involved in materials and industrial design

soil loss for erosion is a natural phenomenon in soil dynamics influenced by climate soil intrinsic properties and morphology that can both trigger and enhance the process anthropic activities like inappropriate agricultural practices deforestation overgrazing forest fires and construction activities may exert a remarkable impact on erosion processes or on the other hand contribute to soil erosion mitigation through a sustainable management of natural resources the book is the continuation of previously published soil erosion studies it is organized in a unique section collecting nine chapters focusing on a variety of aspects of the erosion phenomena

during the past few years there has been an dramatic upsurge in research and development implementations

of new technologies and deployments of actual solutions and technologies in the diverse application areas of embedded systems these areas include automotive electronics industrial automated systems and building automation and control comprising 48 chapters and the contributions of 74 leading experts from industry and academia the embedded systems handbook second edition presents a comprehensive view of embedded systems their design verification networking and applications the contributors directly involved in the creation and evolution of the ideas and technologies presented offer tutorials research surveys and technology overviews exploring new developments deployments and trends to accommodate the tremendous growth in the field the handbook is now divided into two volumes new in this edition processors for embedded systems processor centric architecture description languages networked embedded systems in the automotive and industrial automation fields wireless embedded systems embedded systems design and verification volume i of the handbook is divided into three sections it begins with a brief introduction to embedded systems design and verification the book then provides a comprehensive overview of embedded processors and various aspects of system on chip and fpga as well as solutions to design challenges the final section explores power aware embedded computing design issues specific to secure embedded systems and web services for embedded devices networked embedded systems volume ii focuses on selected application areas of networked embedded systems it covers automotive field industrial automation building automation and wireless sensor networks this volume highlights implementations in fast evolving areas which have not received proper coverage in other publications reflecting the unique functional requirements of different application areas the contributors discuss inter node communication aspects in the context of specific applications of networked embedded systems

considered a standard industry resource the embedded systems handbook provided researchers and technicians with the authoritative information needed to launch a wealth of diverse applications including those in automotive electronics industrial automated systems and building automation and control now a new resource is required to report on current developments and provide a technical reference for those looking to move the field forward yet again divided into two volumes to accommodate this growth the embedded systems handbook second edition presents a comprehensive view on this area of

computer engineering with a currently appropriate emphasis on developments in networking and applications those experts directly involved in the creation and evolution of the ideas and technologies presented offer tutorials research surveys and technology overviews that explore cutting edge developments and deployments and identify potential trends this first self contained volume of the handbook embedded systems design and verification is divided into three sections it begins with a brief introduction to embedded systems design and verification it then provides a comprehensive overview of embedded processors and various aspects of system on chip and fpga as well as solutions to design challenges the final section explores power aware embedded computing design issues specific to secure embedded systems and web services for embedded devices those interested in taking their work with embedded systems to the network level should complete their study with the second volume network embedded systems
