contracts for infrastructure projects an international guide provides a guide to the law relating to construction contracts for infrastructure projects it is intended for the use of engineers and other professionals who are involved in the negotiation and administration of construction contracts to enable them to understand the risks involved and how to minimise them the principles of construction law outlined in this book apply to small construction contracts as well as very large contracts for which the contract sum may be in the billions of dollars the focus of the book is on construction contracts entered into by commercial organisations operating in a business environment contract law generally assumes that such parties are of equal bargaining power and puts relatively few fetters on their ability to agree on the terms of their bargain however where legislation impacts on the execution of construction projects or the operation of construction contracts

it may be of major importance in protecting the rights of weaker parties or third parties it is assumed that the users of this book will be familiar with the general concepts of tendering and contracting for engineering and construction projects but may not have any formal knowledge of the law to the extent possible the emphasis is on general principles of contract law that are widely accepted in many jurisdictions examples are drawn from case law in a number of common law jurisdictions as well as from civil codes with radical and innovative design solutions everyone could be living in buildings and settlements that are more like gardens than cargo containers and that purify air and water generate energy treat sewage and produce food at lower cost birkeland introduces systems design thinking that cuts across academic and professional boundaries and the divide between social and physical sciences to move towards a transdisciplinary approach to environmental and social problem solving this sourcebook is useful for teaching as each topic within the field of environmental management and social change has pairs of short readings providing diverse perspectives to compare contrast and debate design for sustainability presents examples of integrated systems design based on ecological principles and concepts and drawn from the foremost designers in the fields of industrial design materials housing design urban planning and transport landscape and permaculture and energy and resource management stellenbosch faces the same challenges that most south african urban areas face rapid urbanisation sluggish economic growth growing inequalities unsustainable use of natural resources deteriorating biodiversity social problems unhealthy living insecure supplies of healthy food degrading soils infrastructure backlogs and inadequate urban planning at the same time stellenbosch has tremendous potential it brings together in one beautiful place extra ordinary intellectual capacity social diversity financial resources creative potential high value eco systems spiritual energy and some of south africa s most vibrant grassroots social movements in its poorest areas the brief given to the writers was to examine the current challenges and discuss what needs to change in the way we think about these challenges to ensure more positive and sustainable long term outcomes this is therefore a contribution that aims to further open up and widen recent dialogues about the future that stellenbosch deserves back cover
