Concealed Questions 2012-03-12

this book presents a novel analysis of concealed question constructions reports of a mental attitude in which part of a sentence looks like a nominal complement e g eve s phone number in adam knows eve s phone number but is interpreted as an indirect question adam knows what eve s phone number is such constructions are puzzling in that they raise the question of how their meaning derives from their constituent parts in particular how a nominal complement eve s phone number normally used to refer to an entity e g eve s actual phone number in adam dialled eve s phone number ends up with a question like meaning in this book ilaria frana adopts a theory according to which noun phrases with concealed question meanings are analysed as individual concepts the traditional individual concept theory is modified and applied to the phenomena discussed in the recent literature and some new problematic data the end result is a fully compositional account of a wide range of concealed question constructions the exploration of concealed questions offered in the book provides insights into both issues in semantic theory such as the nature of quantification in natural languages and the use of type shifter in the grammar and issues surrounding the syntax semantics interface such as the interpretation of copy traces and the effects on semantic interpretation of different syntactic analyses of relative clauses the book will interest scholars and graduate students in linguistics especially those interested in semantics and the syntax semantics interface as well as philosophers of language working on the topic of intensionality

Non-Canonical Questions 2024-04-09

this book is the first to present a comprehensive theory of non canonical questions those question types that do not only request information from the addressee but rather additionally tell us something about the speaker s epistemic and or emotional state such as can t find

the value questions echo questions rhetorical questions and surprise questions while much recent research has explored the formal semantics and the phonetics and phonology of both canonical and non canonical questions the literature is still lacking a comprehensive account from a syntax pragmatics perspective that brings together the multiple findings and strands of research from the last twenty years the standard view in the syntax pragmatics literature is that most special interpretations of non canonical questions involve syntactic projections at or even above the level of illocutionary force in this work andreas trotzke argues that this approach is a mistake and proposes a new alternative theory of non canonical questions in which both their special pragmatics and their syntax as well as in many cases their emotive component can be derived solely from propositional level operators that do not affect the illocutionary level of utterances and can be found across illocutionary forces this account dramatically simplifies the syntactic analysis of non canonical questions and is also able to capture some previously unobserved data in the discourse behavior of those question types

the social question is back yet today's social question is not primarily between labour and capital as it was in the nineteenth century and throughout much of the twentieth the contemporary social question is located at the interstices between the global south and the global north it finds its expression in movements of people seeking a better life or fleeing unsustainable social political economic and ecological conditions it is transnationalized not only because migrants and their significant others entertain ties across the borders of national states

staying in touch with family and friends receiving or sending financial remittances in transnational social spaces also of importance are cross border recruitment schemes for workers and the cross border diffusion of norms appealed to in the case of migration for example the social right to decent work as a human right moreover migration can become an issue of inclusion or exclusion in fields important to life chances in the emigration transit or immigration states a transnationalization of national states and as in the nineteenth century political conflicts arise constituting the social question as a public concern in earlier periods class differences dominated conflicts while class has always been criss crossed by manifold heterogeneities not least of all cultural ones around ethnicity religion and language it is these latter heterogeneities that have sharpened in situations of immigration and emigration over the past decades casting a wide net in terms of conceptual and empirical scope this book tackles both the social structure and the politics of social inequalities it sets a comprehensive agenda for research which also includes the public role of social scientists in dealing with the transnationalized social question
