this book consists of 16 surveys on thurston s work and its later development the authors are mathematicians who were strongly influenced by thurston s publications and ideas the subjects discussed include among others knot theory the topology of 3 manifolds circle packings complex projective structures hyperbolic geometry kleinian groups foliations mapping class groups teichmüller theory anti de sitter geometry and co minkowski geometry the book is addressed to researchers and students who want to learn about thurston s wide ranging mathematical ideas and their impact at the same time it is a

tribute to thurston one of the greatest geometers of all time whose work extended over many fields in mathematics and who had a unique way of perceiving forms and patterns and of communicating and writing mathematics

the subject of kleinian groups and hyperbolic 3 manifolds is currently undergoing explosively fast development with many old problems and conjectures close to resolution this volume proceedings of the warwick workshop in september 2001 contains expositions of many of these breakthroughs including minsky s lectures on the first half of the proof of the ending lamination conjecture the bers density conjecture by brock and bromberg the tameness conjecture by kleineidam and souto the state of the art in cone manifolds by hodgson and kerckhoff and the counter example to thurston s k 2 conjecture by epstein marden and markovic it also contains jørgensen s famous paper on pairs of once punctured tori in print for the first time the excellent collection of papers here will appeal to graduate students who will find much here to inspire them and established researchers who will find this valuable as a snapshot of current research

gliomas developing in the brain from the transformed glial cells are a very special kind of tumor extremely refractory to conventional treatments therefore for the development of new antitumor strategies a better understanding of molecular mechanisms responsible for their biology growth and invasion is still needed this book is a reference on cellular signaling processes regulating gliomas physiology and invasiveness the work is focused on the mechanism of nucleotide receptor activation by exogenous nucleotides and formation of complex signaling cascades induced by growth factors cytokines and cannabinoids the second edition of the book enriched in new chapters provides a framework explaining how signal transduction elements may modulate numerous genetic and epigenetic alterations describes the role of local microenvironment in cellular growth progression and invasion and in the light of extensive new results presents perspectives concerning potential targets for gliomas therapy

melanoma is considered to be one of the most aggressive forms of skin neoplasms despite aggressive researches towards finding treatments no effective therapy exists to inhibit the metastatic spread of malignant melanoma the 5 year survival rate of metastatic melanoma is still

significantly low and there has been an earnest need to develop more effective therapies with greater anti melanoma activity through the accomplishment of over 100 distinguished and respected researchers from 19 different countries this book covers a wide range of aspects from various standpoints and issues related to melanoma these include the biology of melanoma pigmentations pathways receptors and diagnosis and the latest treatments and therapies to make potential new therapies not only will this be beneficial for readers but it will also contribute to scientists making further breakthroughs in melanoma research

this second edition of ian roberts s highly successful textbook on diachronic syntax has been fully revised and updated throughout to take account of the multiple developments in the field in the last decade the book provides a detailed account of how standard questions in historical linguistics including word order change grammaticalization and reanalysis can be explored in terms of current minimalist theory and universal grammar this new edition offers expanded coverage of a range of topics including null subjects the final over final condition the diachrony of wh movement the tolerance principle and creoles and creolization and explores further advances in the theory of parametric variation each

chapter includes suggestions for further reading and the book concludes with a comprehensive glossary of key terms written by one of the leading scholars in the field the volume will remain an ideal textbook for students of historical linguistics and a valuable reference for researchers and students in related areas such as syntax comparative linguistics language contact and language acquisition

often our trans generational legacies are stories of us and them that never reach their terminus we carry fixed narratives and the ghosts of our perpetrators and of our victims we long to be subjects in our own history but keep reconstituting the other as an object in their own history trans generational trauma and the other argues that healing requires us to engage with the other who carries a corresponding pre history without this dialogue alienated ghosts can become persecutory objects in psyche politics and culture this volume examines the violent loyalties of the past the barriers to dialogue with our other and complicates the inter subjectivity of big history identifying our inherited narratives and relinquishing splitting these authors ask how we can re cast our other and move beyond dysfunctional repetitions in our individual lives and in society featuring rich clinical material trans generational trauma and the other provides an invaluable guide to expanding the application of trans generational transmission in psychoanalysis it will appeal to psychoanalysts psychoanalytic psychotherapists and trauma experts

physics once known as natural philosophy is the most basic science explaining the world we live in from the largest scale down to the very very smallest and our understanding of it has changed over many centuries in black bodies and quantum cats science writer jennifer ouellette traces key developments in the field setting descriptions of the fundamentals of physics in their historical context as well as against a broad cultural backdrop newton s laws are illustrated via the film addams family values while back to the future demonstrates the finer points of special relativity poe s the purloined letter serves to illuminate the mysterious nature of neutrinos and jeanette winterson s novel gut symmetries provides an elegant metaphorical framework for string theory an enchanting and edifying read black bodies and quantum cats shows that physics is not an arcane field of study but a profoundly human endeavor and a fundamental part of our everyday world

this volume represents an interdisciplinary approach to an understanding of the chemistry physiology and medical significance of the vitamin riboflavin information has been reviewed on the physiological role of the vitamin the metabolic effects of riboflavin deficiency in animals and man and the regulation of riboflavin metabolism in each chapter early background material has been included but the major emphasis has been on the many recent advances that have been made the early chapters of the book are concerned with the physical and chemical properties of riboflavin and its coenzyme derivatives and the nature of the interactions between flavoprotein apoenzymes and their coenzymes the various methods currently available for measuring f1avins in biological tissues particularly in man have been described in detail together with newer procedures that appear to have certain advantages over existing techniques chapters dealing with the absorption excretion and metabolism of riboflavin provide basic data on the processes involved in vitamin uptake and in metabolic transformations
