## **The Impact of the Quality Assessment of Optimal Assignment for Data Association in a Multitarget Tracking Context**

1959

the main purpose of this paper is to apply and to test the performance of a new method based on belief functions proposed by dezeret et al in order to evaluate the quality of the individual association pairings provided in the optimal data association solution for improving the performances of multisensormultitarget tracking systems

## **Functional Tests of Solutions of Personnel Assignment Problems**

1994-01-01

the methods described here include eigenvalue estimates and reduction techniques for lower bounds parallelization genetic algorithms polyhedral approaches greedy and adaptive search algorithms

## **Quadratic Assignment and Related Problems**

2013-03-14

assignment problems is a useful tool for researchers practitioners and graduate students in 10 self contained chapters it provides a comprehensive treatment of assignment problems from their conceptual beginnings through present day theoretical algorithmic and practical developments the topics covered include bipartite matching algorithms linear assignment problems quadratic assignment problems multi index assignment problems and many variations of these researchers will benefit from the detailed exposition of theory and algorithms related to assignment problems including the basic linear sum assignment problem and its variations practitioners will learn about practical applications of the methods the performance of exact and heuristic algorithms and software options this book also can serve as a text for advanced courses in areas related to discrete mathematics and combinatorial optimisation the revised reprint provides details on a recent discovery related to one of jacobi s results new material on inverse assignment problems and quadratic assignment problems and an updated bibliography

## **Assignment and Matching Problems: Solution Methods with FORTRAN-Programs**

2012-10-31

the purpose of the study is to describe the classification and assignment process applied to men entering military service and to similarly describe the process followed for their separation from the service special attention is given to how previously acquired skills are identified and acted upon and how the recruit s occupational preferences and interests are related to his classification and assignment the nature of the counselling training and placement activities is the focal point of the description of the separation process information was obtained from a review of official policies procedures and manuals interviews with staff members and observation of the classification assignment and separation processes a

comparative analysis was made of the procedures of the air force army marine corps and navy author

## **Assignment Problems, Revised Reprint**

1971

frequency assignment and network planning for digital terrestrial broadcasting systems focuses on digital audio broadcasting and digital video broadcasting the author provides a concise introduction to the subject and presents principles concepts and commonly accepted methods used in the planning process the frequency assignment material focuses on allotment planning while network planning is dealt with mainly from a network optimization perspective all methods introduced and mathematical tools presented are fully explained general concepts are illustrated with the help of several planning scenarios both for frequency assignment and network planning frequency assignment and network planning are vital issues throughout most of europe and north america as a direct consequence of the increasing demand for digital communication systems

## **A Descriptive Analysis of the Classification, Assignment, and Separation Systems of the Armed Services**

1999

the assignment of contractual rights is of immense importance for the world of business and finance never before have assignments taken place on such a large scale as is the case in the contemporary securitisation market many receivables based financial transactions such as securitisations are cross border transactions it is therefore often crucial to determine which law governs the proprietary aspects of assignment the european commission has in its proposal for a regulation on the law applicable to contractual obligations formulated a new conflict rule referring the enforceability of an assignment against third parties to the law of the assignor's residence this book demonstrates how the solution which has been adopted by the commission is inadequate for receivables based cross border transactions the authors argue that a cross border assignment should instead be governed by the law chosen by the assignor and the assignee and in the absence of a choice by the law applicable to the assigned claim the most important policy behind the commission's conflict rule i e that the assignor's creditors should be able to look to the assignor's law for registration requirements can be realized in subtler ways in particular by means of a special conflict rule for public filing systems the annexes contain the full texts of the commission's proposal the un convention on the assignment of receivables and chapter 11 of the principles of european contract law assignment of claims

## ***Frequency Assignment: Models and Algorithms***

2006-06-02

this book is focused on the discussion of the traffic assignment problem the mathematical and practical meaning of variables functions and basic principles this work gives information about new approaches methods and algorithms based on original methodological technique developed by authors in their publications for the past several years as well as corresponding prospective implementations the book may be of interest to a wide range of readers such as civil engineering students traffic engineers developers of traffic assignment algorithms etc the obtained results here

are to be used in both practice and theory this book is devoted to the traffic assignment problem formulated in a form of nonlinear optimization program the most efficient solution algorithms related to the problem are based on its structural features and practical meaning rather than on standard nonlinear optimization techniques or approaches the authors have carefully considered the meaning of the traffic assignment problem for efficient algorithms development

## ***Frequency Assignment and Network Planning for Digital Terrestrial Broadcasting Systems***

2006

this book presents exact that is minimal solutions to individual steps in the design process for digital microfluidic biochips dmfb as well as a one pass approach that combines all these steps in a single process all of the approaches discussed are based on a formal model that can easily be extended to cope with further design problems in addition to the exact methods heuristic approaches are provided and the complexity classes of various design problems are determined presents exact methods to tackle a variety of design problems for digital microfluidic biochips dmfb describes an holistic one pass approach solving different design steps all at once based on a formal model of dmfb that is easily adaptable to deal with further design tasks

## **Assignment in European Private International Law**

1980

this book explores the various aspects of current research in channel radio assignment the collection includes several chapters concerned with developing a sound theoretical framework for channel assignment also included are the modelling and efficient solution of network design problems which are becoming increasingly important in wireless networks this book illustrates a range of mathematical and computational tools including graph colouring graph labelling linear and nonlinear optimization meta heuristics constraint satisfaction and multidisciplinary optimization

## **Assignment and Matching Problems**

2019-11-26

traditionally the three most important manufacturing functions are process planning scheduling and due date assignment which are handled sequentially and separately this book integrates these manufacturing processes and functions to increase global performance along with manufacturing and production cost savings integrated process planning scheduling and due date assignment combines the most important manufacturing functions to use manufacturing resources better reduce production costs and eliminate bottlenecks with increased production efficiency the book covers how the integration will help eliminate scheduling conflicts and how to adapt to irregular shop floor disturbances it also explains how other elements such as tardiness and earliness are penalized and how prioritizing helps improve weight performance function this book will draw the interest of professionals students and academicians in process planning scheduling and due date assignment it could also be supplemental material for manufacturing courses in industrial engineering and manufacturing engineering departments

## ***Optimization Models and Methods for Equilibrium Traffic Assignment***

2018-06-11

welcome to the proceedings of the 2005 ifip international conference on bedded and ubiquitous computing euc 2005 which was held in nagasaki japan december 6 9 2005 embedded and ubiquitous computing is emerging rapidly as an exciting new paradigm to provide computing and communication services all the time erywhere its systems are now pervading every aspect of life to the point that they are hidden inside various appliances or can be worn unobtrusively as part of clothing and jewelry this emergence is a natural outcome of research and technological advances in embedded systems pervasive computing and c munications wireless networks mobile computing distributed computing and agent technologies etc its tremendous impact on academics industry gove ment and daily life can be compared to that of electric motors over the past century in fact it but promises to revolutionize life much more profoundly than elevators electric motors or even personal computers the euc 2005 conference provided a forum for engineers and scientists in academia industry and government to address profound issues including te nical challenges safety and social legal political and economic issues and to present and discuss their ideas results work in progress and experience on all aspects of embedded and ubiquitous computing

## **Exact Design of Digital Microfluidic Biochips**

2002

this monograph provides both a unified account of the development of models and methods for the problem of estimating equilibrium traffic flows in urban areas and a survey of the scope and limitations of present traffic models the development is described and analyzed by the use of the powerful instruments of nonlinear optimization and mathematical programming within the field of operations research the first part is devoted to mathematical models for the analysis of transportation network equilibria the second deals with methods for traffic equilibrium problems this title will interest readers wishing to extend their knowledge of equilibrium modeling and analysis and of the foundations of efficient optimization methods adapted for the solution of large scale models in addition to its value to researchers the treatment is suitable for advanced graduate courses in transportation operations research and quantitative economics

## **Methods and Algorithms for Radio Channel Assignment**

2023-08-10

nonlinear assignment problems naps are natural extensions of the classic linear assignment problem and despite the efforts of many researchers over the past three decades they still remain some of the hardest combinatorial optimization problems to solve exactly the purpose of this book is to provide in a single volume major algorithmic aspects and applications of naps as contributed by leading international experts the chapters included in this book are concerned with major applications and the latest algorithmic solution approaches for naps approximation algorithms polyhedral methods semidefinite programming approaches and heuristic procedures for naps are included while applications of this problem class in the areas of multiple target tracking in the context of military surveillance systems of experimental high energy physics and of parallel processing are presented audience researchers and graduate students in the areas of combinatorial optimization mathematical

programming operations research physics and computer science

## Integrated Process Planning, Scheduling, and Due-Date Assignment

2005-11-24

the quadratic assignment problem qap was introduced in 1957 by koopmans and beckmann to model a plant location problem since then the qap has been object of numerous investigations by mathematicians computers scientists operations researchers and practitioners nowadays the qap is widely considered as a classical combinatorial optimization problem which is still attractive from many points of view in our opinion there are at least three main reasons which make the qap a popular problem in combinatorial optimization first the number of real life problems which are mathematically modeled by qaps has been continuously increasing and the variety of the fields they belong to is astonishing to recall just a restricted number among the applications of the qap let us mention placement problems scheduling manufacturing vlsi design statistical data analysis and parallel and distributed computing secondly a number of other well known combinatorial optimization problems can be formulated as qaps typical examples are the traveling salesman problem and a large number of optimization problems in graphs such as the maximum clique problem the graph partitioning problem and the minimum feedback arc set problem finally from a computational point of view the qap is a very difficult problem the qap is not only np hard and hard to approximate but it is also practically intractable it is generally considered as impossible to solve to optimality qap instances of size larger than 20 within reasonable time limits

## Embedded and Ubiquitous Computing - EUC 2005

2014-01-15

this book constitutes the refereed proceedings of the first international workshop on quantum technology and optimization problems qtop 2019 held in munich germany in march 2019 the 18 full papers presented together with 1 keynote paper in this volume were carefully reviewed and selected from 21 submissions the papers are grouped in the following topical sections analysis of optimization problems quantum gate algorithms applications of quantum annealing and foundations and quantum technologies

## Assignment and Matching Problems

2015-01-19

howard rosenthal takes the reader into the offices of 56 of the finest therapists in the world to learn their favorite counseling and therapy homework assignments the text literally reads like a who's who in therapy packing in more famous therapists than any book of its kind albert ellis uses his rebt self help form to create effective homework beginning with the very first session william glasser reveals his getting rid of the seven habits of unhappy homework for the first time richard n bolles author of what color is your parachute explains how clients can use trialing to solve career difficulties and overcome personal obstacles microcounseling skills pioneer allen e ivey shares gems of therapeutic wisdom based on 35 years experience noted textbook authors marianne schneider corey and gerald corey share an innovative paradigm for implementing client centered homework for group therapy clients psychiatrist peter r breggin of talking back to prozac fame utilizes a homework

assignment involving kindness rather than relying upon today's dangerous psychiatric drugs and the list goes on and on dr rosenthal also teams up with the eminent therapist jeffrey kottler to illuminate the pitfalls of therapeutic homework overall this lively innovative book promises to become a classic in the field of helping and is the perfect sequel to dr rosenthal's bestselling favorite counseling and therapy techniques

## **The Traffic Assignment Problem**

2000-11-30

assignment problem ap is well studied and important area in optimization in this research manuscript an assignment problem in neutrosophic environment called as neutrosophic assignment problem nap is introduced the problem is proposed by using the interval valued trapezoidal neutrosophic numbers in the elements of cost matrix as per the concept of score function the interval valued trapezoidal neutrosophic assignment problem ivtnap is transformed to the corresponding an interval valued ap to optimize the objective function in interval form we use the order relations these relations are the representations of choices of decision maker the maximization or minimization model with objective function in interval form is changed to multi objective based on order relations introduced by the decision makers preference in case of interval profits or costs in the last we solve a numerical example to support the proposed solution methodology

## **Nonlinear Assignment Problems**

2013-03-14

the subject matter has been discussed in such a simple way that the students will find no difficulty to understand it the proof of various theorems and examples has been given with minute details each chapter of this book contains complete theory and fairly large number of solved examples sufficient problems have also been selected from various universities examination papers contents inventory control non linear programming methods problem analysis queuing theory

## **The Quadratic Assignment Problem**

2019-03-13

this volume lncs 12735 constitutes the papers of the 18th international conference on the integration of constraint programming artificial intelligence and operations research cpaor 2021 which was held in vienna austria in 2021 due to the covid 19 pandemic the conference was held online the 30 regular papers presented were carefully reviewed and selected from a total of 75 submissions the conference program included a master class on the topic explanation and verification of machine learning models

## **Quantum Technology and Optimization Problems**

2001

this book constitutes the refereed proceedings of the 11th european conference on evolutionary computation in combinatorial optimization evocop 2011 held in torino italy in april 2011 the 22 revised full papers presented were carefully reviewed and selected from 42 submissions the papers present the latest research and discuss current developments and applications in metaheuristics a paradigm to effectively

solve difficult combinatorial optimization problems appearing in various industrial economical and scientific domains prominent examples of metaheuristics are evolutionary algorithms simulated annealing tabu search scatter search memetic algorithms variable neighborhood search iterated local search greedy randomized adaptive search procedures estimation of distribution algorithms and ant colony optimization

## ***Favorite Counseling and Therapy Homework Assignments***

2020-10-01

this fifth volume on advances and applications of dsmt for information fusion collects theoretical and applied contributions of researchers working in different fields of applications and in mathematics and is available in open access the collected contributions of this volume have either been published or presented after disseminating the fourth volume in 2015 available at fs unmc.edu/dsmt/book4.pdf or onera.fr/sites/default/files/2015/dsmt\_book4.pdf in international conferences seminars workshops and journals or they are new the contributions of each part of this volume are chronologically ordered first part of this book presents some theoretical advances on dsmt dealing mainly with modified proportional conflict redistribution rules pcr of combination with degree of intersection coarsening techniques interval calculus for pcr thanks to set inversion via interval analysis sivia rough set classifiers canonical decomposition of dichotomous belief functions fast pcr fusion fast inter criteria analysis with pcr and improved pcr5 and pcr6 rules preserving the quasi neutrality of quasi vacuous belief assignment in the fusion of sources of evidence with their matlab codes because more applications of dsmt have emerged in the past years since the apparition of the fourth book of dsmt in 2015 the second part of this volume is about selected applications of dsmt mainly in building change detection object recognition quality of data association in tracking perception in robotics risk assessment for torrent protection and multi criteria decision making multi modal image fusion coarsening techniques recommender system levee characterization and assessment human heading perception trust assessment robotics biometrics failure detection gps systems inter criteria analysis group decision human activity recognition storm prediction data association for autonomous vehicles identification of maritime vessels fusion of support vector machines svm silx furtif rust code library for information fusion including pcr rules and network for ship classification finally the third part presents interesting contributions related to belief functions in general published or presented along the years since 2015 these contributions are related with decision making under uncertainty belief approximations probability transformations new distances between belief functions non classical multi criteria decision making problems with belief functions generalization of bayes theorem image processing data association entropy and cross entropy measures fuzzy evidence numbers negator of belief mass human activity recognition information fusion for breast cancer therapy imbalanced data classification and hybrid techniques mixing deep learning with belief functions as well we want to thank all the contributors of this fifth volume for their research works and their interests in the development of dsmt and the belief functions we are grateful as well to other colleagues for encouraging us to edit this fifth volume and for sharing with us several ideas and for their questions and comments on dsmt through the years we thank the international society of information fusion isif.org for diffusing main research works related to information fusion including dsmt in the international fusion conferences series over the years florentin smarandache is grateful to the university of new mexico u.s.a. that many times partially sponsored him to attend international conferences workshops and seminars on information fusion jean dezert is grateful to the department of information processing and systems dtis of the french aerospace lab office national

études et de recherches spatiales palaiseau france for encouraging him to carry on this research and for its financial support alena tchamova is first of all grateful to dr jean dezert for the opportunity to be involved during more than 20 years to follow and share his smart and beautiful visions and ideas in the development of the powerful dezert smarandache theory for data fusion she is also grateful to the institute of information and communication technologies bulgarian academy of sciences for sponsoring her to attend international conferences on information fusion

## **A Novel Method for Neutrosophic Assignment Problem by using Interval-Valued Trapezoidal Neutrosophic Number**

2006

the two volume set lnaei 13067 and 13068 constitutes the proceedings of the 20th mexican international conference on artificial intelligence micai 2021 held in mexico city mexico in october 2021 the total of 58 papers presented in these two volumes was carefully reviewed and selected from 129 submissions the first volume advances in computational intelligence contains 30 papers structured into three sections machine and deep learning image processing and pattern recognition evolutionary and metaheuristic algorithms the second volume advances in soft computing contains 28 papers structured into two sections natural language processing intelligent applications and robotics

## ***Operation Research***

2021-06-17

the book is a collection of high quality peer reviewed research papers presented in international conference on soft computing systems icscs 2015 held at noorul islam centre for higher education chennai india these research papers provide the latest developments in the emerging areas of soft computing in engineering and technology the book is organized in two volumes and discusses a wide variety of industrial engineering and scientific applications of the emerging techniques it presents invited papers from the inventors originators of new applications and advanced technologies

## **Integration of Constraint Programming, Artificial Intelligence, and Operations Research**

2011-04-27

if values conflict and rival human interests clash we often have to weigh them against each other however under particular conditions incommensurability prevents the assignment of determinable and impartial weights in those cases an objective balance does not exist the original thesis of this book sheds new light on aspects of incommensurability and its implications for public decision making ethics and justice martijn boot analyzes a number of previously ignored or unrecognized concepts such as incomplete comparability incompletely justified choice indeterminateness and ethical deficit concepts that are essential for comprehending problems of incommensurability apart from problematic implications incommensurability has also favourable consequences it creates room for autonomous rational choices that are not dictated by reason besides insight into incommensurability promotes recognition of different possible rankings of universally valid but sometimes conflicting human values this book avoids

unnecessary technical language and is accessible not only for specialists but for a large audience of philosophers ethicists political theorists economists lawyers and interested persons without specialized knowledge

## **Evolutionary Computation in Combinatorial Optimization**

2009

computational social choice is an expanding field that merges classical topics like economics and voting theory with more modern topics like artificial intelligence multiagent systems and computational complexity this book provides a concise introduction to the main research lines in this field covering aspects such as preference modelling uncertainty reasoning social choice stable matching and computational aspects of preference aggregation and manipulation the book is centered around the notion of preference reasoning both in the single agent and the multi agent setting it presents the main approaches to modeling and reasoning with preferences with particular attention to two popular and powerful formalisms soft constraints and cp nets the authors consider preference elicitation and various forms of uncertainty in soft constraints they review the most relevant results in voting with special attention to computational social choice finally the book considers preferences in matching problems the book is intended for students and researchers who may be interested in an introduction to preference reasoning and multi agent preference aggregation and who want to know the basic notions and results in computational social choice table of contents introduction preference modeling and reasoning uncertainty in preference reasoning aggregating preferences stable marriage problems

## **Operation Management**

2023-12-27

this book constitutes the refereed proceedings of the 13th international workshop on security iwsec 2018 held in sendai japan in september 2018 the 18 regular papers and 2 short papers presented in this volume were carefully reviewed and selected from 64 submissions they were organized in topical sections named cryptanalysis implementation security public key primitives security in practice secret sharing symmetric key primitives and provable security

## **Advances and Applications of DSMT for Information Fusion (Collected Works. Volume 5)**

2021-10-20

this book constitutes the refereed proceedings of the 7th international conference on principles and practice of constraint programming cp 2001 held in paphos cyprus in november december 2001 the 37 revised full papers 9 innovative applications presentations and 14 short papers presented were carefully reviewed and selected from a total of 135 submissions all current issues in constraint processing are addressed ranging from theoretical and foundational issues to advanced and innovative applications in a variety of fields

## **Advances in Soft Computing**

2015-12-07

this book reports on an operational management approach to improving bike sharing systems by compensating for fluctuating demand patterns the aim is to redistribute bikes within the system allowing it to be actively balanced the book describes a mathematical model as well as data driven and simulation based approaches further it shows how these elements can be combined in a decision making support system for service providers in closing the book uses real world data to evaluate the method developed and demonstrates that it can successfully anticipate changes in demand thus supporting efficient scheduling of transport vehicles to manually relocate bikes between stations

## **Proceedings of the International Conference on Soft Computing Systems**

2017-06-27

recent global anxiety indicates that more focus needs to be directed at economic issues related to industry conventional techniques often do not adequately embrace the integrated global factors that affect unique industries and industry focused computational tools have not been readily available until now computational economic analysis for engineering and industry presents direct computational tools techniques models and approaches for economic analysis with a specific focus on industrial and engineering processes here are just a few of the topics you ll find new economic analysis models and techniques tent shaped cash flows industrial economic analysis project based economic measures profit ratio analysis equity break even point utility based analysis project balance analysis customized enginea software tool engineering conversion factors the authors supply downloadable software enginea that allows you to easily perform the various techniques outlined in the text such as investment justification breakeven analysis and replacement analysis providing a high level presentation of economic analysis of the unique aspects of industrial processes they integrate mathematical models optimization computer analysis and managerial decision processes a comprehensive treatment of economic analysis considering the specific needs of industry the book is a pragmatic alternative to conventional economic analysis books

## **Incommensurability and its Implications for Practical Reasoning, Ethics and Justice**

2011

will the new rome i regulation meet its goals to improve the predictability of the outcome of litigation to bring certainty as to the law applicable and the free movement of judgments to designate the same national law irrespective of the country of the court in which an action is brought the most important features of this instrument were outlined and discussed by distinguished legal experts from all over europe and beyond at the conference the rome i regulation held in verona on march 2009 this first book in english on the rome i regulation contains the papers submitted to that conference

## **A Short Introduction to Preferences**

2018-08-08

optimization methodologies are fundamental instruments to tackle the complexity of today s engineering processes engineering optimization 2014 is dedicated to optimization methods in engineering and contains the papers presented at the 4th

international conference on engineering optimization engopt2014 lisbon portugal 8 11 september 2014 the book will be of interest to engineers applied mathematicians and computer scientists working on research development and practical applications of optimization methods in engineering
